RAILROAD RATES.—To secure the rate made by the passenger associations when going to the Boston convention this month you will pay full fare going and when purchasing your ticket ask for a certificate of such purchase from the agent selling you the ticket. This when countersigned by the secretary at the convention will be an order to the Boston agent to sell you a return ticket at one third fare. Ticket agents are supplied with blank forms for the certificates.

ANY FLORIST who can manage to get to Boston next week and fails to improve the opportunity will certainly miss a most profitable and enjoyable week.

Philadelphia to Boston.

The Florists' Club of Philadelphia will go to Boston via the Fall River Route. Those wishing to travel with the party should address for further information, John Westcott, 1514 Chestnut street, Philadelphia, or Chas. D. Ball, Holmesburg, Philadelphia.

New York to Boston.

The New Yorkers and Philadelphians will travel to Boston via the Fall River Line of steamers from New York, leaving the latter city at 5:30 p. m. August 18. The rate is one and one third fares for the round trip. Address applications for state-rooms to J. N. May, Summit, N. J. Cost of state-rooms is in addition to price of ticket, and are \$1 and \$2 each according to location. Each room accommodates two persons, and a saving can be effected by two arranging to occupy one room.

Chicago to Boston.

The Chicago Florist Club has arranged for special cars from Chicago to Boston via the Niagara Falls Short Line, leaving Chicago at 9 p. m. August 17 and arriving at Boston August 19 at 9:55 a. m. The rate of one and one-third fares for the round trip amounts to \$25.35 by this route. Owing to the very advantageous arrangements made for special sleeping cars, the Chicago Florist Club has decided to bear this sleeping car expense on the trip down, and cordially invites all western florists who can make it convenient to travel via of Chicago to make use of these cars, free of expense to them. Club members are entitled to the same privilege. Send applications to G. L. Grant, secretary, 54 La Salle street, Chicago.

From West of Chicago and St. Louis.

As the Western Passenger Association has refused to make a reduced rate to the Boston convention, florists in the territory of this association will be obliged to pay full fare to some point in the Central Passenger Association's territory and secure the reduced rate from that point on. The cost of the trip can be reduced to the minimum by buying a straight ticket to Chicago, then purchasing a ticket from there to Boston on the certificate plan via the Niagara Falls Short Line, and take advantage of the free sleeper tendered them by the Chicago Florist Club.

Buffalo to Boston.

The florists of Buffalo and vicinity will go to the convention via the West Shore Railroad, connecting at Buffalo with the train bearing the delegation from Chicago and the west, on August 18. Members

located at stations on the West Shore road between Buffalo and Albany who can arrange to take the same train should do so, as the larger the party the merrier. Those starting from Buffalo may secure information regarding tickets, etc., from Daniel B. Long, 457 Main street, or E. J. Mepsted, 479 Main street, Buffalo.

Boston Hotels.

Following is a list of Boston hotels at which arrangements have been made for delegates to the coming convention of the Society of American Florists. It is arranged according to distance from the convention hall, beginning with the nearest:

The American Chrysanthemum Society.

The progress of the society has not been as rapid and pronounced as those who have the welfare of the chrysanthemum at heart had hoped and expected.

There are causes for this seeming apathy which unfortunately has delayed the good work a year. It can not be that a subject of such vast importance as a national chrysanthemum society for this country can be put off either by whims or caprice. Therefore, let all who are interested and especially those who have been with the promoters from the commencement determine to get together at Boston and make a start which can not be called back.

There is much to be done to get this worthy society on a safe foundation, but it can be done for the chrysanthemum has now taken a place in horticulture which can not be displaced by either fickle fashion or some good men's desires.

Any advice and assistance looking towards the permanent establishment of the A. C. S. will be thankfully received by any of the officers at any time, whether it be at a meeting of those interested or through the medium of the columns of the FLORIST or by private advice.

There is one matter which it is to be regretted can not, this year at least, be accomplished. I refer to an exhibition under the auspices of the A. C. S. To do so would involve great expense to the society, which at this time it is not prepared to bear. But there is one thing which it can do and that very easily, which is to open a register in which all named seedlings be recorded prior to their being distributed. It should be done before circulars or catalogues are printed, so as to avoid duplication of names. An effort was made in that direction last autumn, but the idea did not take shape early enough to be of much benefit. There are several duplications in last year's lists of novelties, which sooner or later will cause much unnecessary confusion. Just as soon as a seedling chrysanthemum assumes such decided character that it is thought worthy of dissemination a name should be given and forwarded immediately to the secretary of the A. C. S., and if there is no other chrysanthemum on the register or in cultivation of the same name it would then take its place in due form.

This is more necessary in this country than any other at present, owing to the climatic conditions whereby seed is so easily and successfully ripened. I trust the above will meet with favor with all importers, seedling raisers, and those who purchase new varieties.

EDWIN LONSDALE.

Prize List, Annual Exhibition Mass. Hort. Society, Boston, Aug. 19-22.

All articles for competition and exhibition must be ready for examination by the committee at 12 M. on Tuesday, August 19. The exhibition will be open to the public at 3 P. M. on Tuesday, and will close at 9 P. M. on Friday.

Special Prizes.

No. 305 Coniferous Trees not Natives of New England—Display in pots or tubs, named \$15 \$10

OFFERED BY R. & J. FARQUHAR & CO.

306 Annuals—Best display, not less than 100 vases, a piece of plate of the value of 25

THEODORE LYMAN FUND.

329 For the best Floral Design, and best kept for three days, to be examined each day, and the prizes awarded the last day, the Lyman Plate, value 35 30 25

BY THE SOCIETY OF AMERICAN FLORISTS.

A For the best decoration of mantel-piece and fireplace. Plate 75 50

OFFERED BY ABRAHAM FRENCH & CO.

B For the best Floral Decoration of Dinner Table. Plate 60 40

OFFERED BY THE "AMERICAN FLORIST."

C For the best named collection of Hardy Herbaceous Flowers, with foliage, from Herbaceous Plants, not having woody or shrubby stems, and all Hardy Bulbs, filling 100 bottles with not less than 75 varieties. Plate 40 30

OFFERED BY HENRY A. DREER.

D For the best collection of Dwarf French Cannabis Cut Flowers and foliage, by amateur exhibitors. Plate 25 15

E For the best collection of Gloxinia Flowers, by amateur exhibitors. Plate 15 10

OFFERED BY PETER HENDERSON & CO.

F For the best collection of Seedling Verbenas of not less than 10 varieties. Plate 25 15

OFFERED BY PARKER & WOOD.

G For the best 100 vases Asters, 3 in each vase. Peony and Victoria flowered, not less than 12 varieties of each. Plate 25 15

OFFERED BY "AMERICAN AGRICULTURIST."

H For the best display of named specimens of Ornamental Foliage, Hardy Trees and Shrubs, filling 50 bottles, in books of the value of 12 8

OFFERED BY J. C. VAUGHAN.

I For the best collection of Dahlias, not less than 24 named varieties, filling 100 vases. Plate 25

J For the best collection of Lipidium Dahlias with buds and foliage, filling 50 vases, 3 in each Plate 15

OFFERED BY BENJAMIN GREY.

K For the best display of Nymphaeas and other aquatic flowers and plants. Plate 25 15

OFFERED BY SIEBRECHT & WADLEY.

L For the best collection of Orchid plants in bloom. Plate 25 15

M For a Single Orchid Plant, to be judged by points. Plate 15

OFFERED BY JOHN GARDINER & CO.

N For the best collection of Gladioli, filling 100 vases. Plate 25 15

OFFERED BY THE "AMERICAN GARDEN."

O For the best collection of Foreign Grasses. Plate 25 15

OFFERED BY THE BOWKER FERTILIZER CO.

P For the best 2 bunches of Foreign Grapes, one or two varieties. Plate 15 10

Q Ornamental Leaved Plants—Six greenhouse Cut Flowers. Plate 15

OFFERED BY GEORGE JOHNSON & CO.

R For the best collection of greenhouse Peaches, Apricots and or Nectarines, 12 specimens each. Plate 25 15

PRIZES OFFERED BY THE SOCIETY.

307 Palms—Pair, in tubs not less than 24 inches in diameter. 15 10

308 Pair, in tubs not less than 20 inches in diameter. 12 8

309 Pair, in tubs not less than 16 inches in diameter. 10 6

310 Pair, in pots not less than 12 inches in diameter. 8 5

311 Greenhouse Plants—Six greenhouse and stove plants, of different named varieties, two Crocus admissible. 30 25 20

312 Single plant for table decoration, dressed at the base, only one entry admissible. 10 8 6

313 Specimen Flowering Plant—Single named variety. 8 6

314 Ornamental Leaved Plants—Six named varieties not offered in the collection of greenhouse plants, Crotons and Dracaenas not admissible. 20 15 12

315 Single specimen, variegated, named, not offered in any collection. 6 5 4

316 Caladiums—Six named varieties. 6 4

317 Ferns—Six named varieties, no Adiantums admissible. 10 8 6

318 Adiantums—Five named varieties 5 4 4

319 Tree Fern—Sgl specimen, named. 10 8 6

320 Cycopods—Four named varieties. 10 8 6

321 Dracaenas—Six named varieties. 8 6

322 Crotons—Six named varieties, in the collection of greenhouse plants. 10 8 6

323 Six in 6-inch pots. 6 5 4

324 Cycad—Single plant, named. 10 8 6

325 Nephenthes—Three plants, named. 10 8 6

326 Orchids—Six plants, named varieties, in bloom. 12 10 10

327 Three plants, named varieties, in bloom. 8 6

328 Single plant in bloom. 4 3

these sets we have many varieties differing from one another mostly in color of bloom, and often also in the shape of the flowers, tint of the foliage and rankness of growth.

The common tall nasturtiums (T. majus) are most always increased from seed and treated as summer blooming annuals. And the seeds when young and tender are gathered and pickled in vinegar for table use; the young flower-buds are also treated in the same way. The different varieties as *atrogangueum*, dark crimson; *coccineum*, fiery red; *luteum*, yellow; *roscum*, rosy, and *Scheurmannianum*, scarlet striped, come pretty true from seed.

The dwarf nasturtiums afford us the largest number of varieties, and seed catalogues teem with them. And we have a yellow-leaved variety esteemed for its colored leaves, and double-flowered varieties that have got to be perpetuated from cuttings.

Among tall nasturtiums T. Lobbianum is my favorite. It affords us a greater variety in color and form than does T. majus, besides it is more floriferous, more perennial and less rank. The varieties come moderately true from seed, but we propagate most of our stock from cuttings. We use it considerably in summer planted out against trellis fences or spreading on the ground, and we grow it in the greenhouse for winter flowers. For winter-blooming we propagate it in July or August, grow it in pots and run the vines on strings under the rafters of the carnation house. When planted out in beds they grow too rankly and bloom too little; when grown in pots, growth is curtailed and blooming enhanced. And it is a very nice scarlet flower to have a lot of in winter.

Among other tropæolums, the canary-bird flower (T. peregrinum) is a common annual in our garden. Tropæolum tricolorum from Chili is a fleshy rooted species grown in greenhouses in winter on wire cylindrical trellises; T. Jarrattii after the same fashion is often grown with it. Tropæolum speciosum is one of the prettiest scarlet-blooming vines in cultivation, a native of Chili, and apparently hardy, but very unsatisfactory here. In many parts of northern Europe it is the crowning glory of the garden. Tropæolum pentaphyllum, T. polyphyllum and T. tuberosum are three other species of great merit as summer decorative perennials, but we have to take them on probation. They have tuberous roots, and are hardy only on warm, well-drained land and under a mulching; those who grow them usually dig up the tubers in fall and winter them under cover as they do Ipomæa and other tubers. The tubers of T. tuberosum are cooked and used for food in South America, and also in some European gardens, but they are mighty poor eating. W. F.

Marketing Cut Flowers.

I was much interested by Mr. Reynolds' paper on marketing cut flowers, read before the Chicago Florist Club and published in your issue of May 15. While the paper is certainly a very clever and exhaustive review of the subject it seems to me that at least one of the statements made is of very doubtful accuracy, and on this statement the whole strength of the argument depends.

While it is certainly true that could we sell our now wasted flowers at even a low figure our profits would be enormously increased, yet I can not believe that there are tens of thousands of buyers awaiting a reduction in prices to take

Nasturtiums (Tropæolum)

What we know as nasturtiums are in fact tropæolums. Nasturtiums proper belong to a different family of plants altogether; the common water cress (*N. officinale*) being one of them.

The common nasturtiums, or tropæolums rather, may be divided into three sets, namely, the common tall nasturtium (*T. majus*), the dwarf or bedding nasturtiums which are diminutive varieties of *T. majus*, and Lobbianum (*T. Lobbianum*) which is the tall one so much grown as a greenhouse plant as well as for outdoor purposes. Of each of

VARIETIES OF *TROPICOLUM MAJUS*.

our surplus stock. In the very height of the gay season when flowers are most expensive, a poor person can buy a bunch of bouvardia, mignonette and heliotrope for a sum which any one having more than enough for the bare necessities of life can easily afford. By this I do not mean that at Christmas or Easter this can be done, but on nearly every other day of the year—and when they can get these and many other beautiful flowers all winter we have no right to assume that they are waiting to buy roses and orchids. The poorer classes can not afford handsome pictures, furniture or

statuary, then why should we suppose they are willing and anxious to buy the choicest productions of our art?

It seems to me that Mr. Reynolds is assuming that flowers are a necessity, and to a limited extent this is true. They are necessary to those whose wealth enables them to possess everything that art and nature can produce, and who are therefore able to cultivate their taste for the beautiful, but it would be absurd to say that the bulk of our population favored in worldly goods must have the expensive flowers cheapened for their especial benefit. I do not believe that

this is so, but on the contrary, that cut flowers are, generally speaking, sold to the best possible advantage for both grower and dealer. The natural conclusion then is that our business has reached that stage where the supply is greater than the demand. With us in the eastern cities this is only partially true. For the present our efforts must be directed towards producing the largest possible quantity of first class blooms during the holidays the party season and at Easter. There is room for much improvement in this respect, for by unskillful management we growers have time and again

failed to respond to the earnest appeals of the dealers for more stuff, and thus indirectly caused the tremendous overproduction at other times.

It seems very possible that this overproduction will always exist to a certain extent under our present social conditions, but by careful study and skillful management the growers can do much to lessen its evils. That the commission system is in any way responsible for overproduction and consequent waste is difficult to believe. For many growers it is decidedly the best way of disposing of their merchandise. For our business it is fast becoming one of specialties, our growers are year by year curtailing the number of varieties grown until in the near future we may expect to find one man growing nothing but mignonette, another only La France roses, and a third only carnations, with the result that we will have finer and cheaper mignonette, La France and carnations than is possible under present mixed conditions. It would then be impossible for any florist or number of florists to make contracts for a grower's entire clip, as in the days of old, and either commission men must handle our products or we must have a market of some kind. Theoretically nearly every grower favors a public market, but practically there are many almost insurmountable objections, and the tendency seems to be the other way. In New York, for example, the commission men seem to handle by far the larger portion of the trade and it is understood that the best growers there are satisfied that it should be so. Can it be allowed that a good commission house is too favorable to the retailers? Is not the commission man's profits dependent on his securing as much as possible for his consignees? I feel confident that the trouble arises from competition and not from the commission system when properly carried out. In conclusion my object has been simply to suggest ideas for more able minds to improve upon and I earnestly hope that this subject will be thoroughly discussed at our Boston meeting.

JOHN NIELS YOUNG.
Germantown, Philadelphia.

Seasonable Notes.

Carnations should now be making rapid growth, in fact from this date up to September 10th they ought to get in their best work of the season. I notice the space between the rows of plants is gradually becoming smaller, which of course means a proportionate increase in the size of the plants. The weather so far this season has been exceptionally favorable to a sturdy development and vigorous habit, the rains which have been abundant seem to have come about the right time in almost every instance, consequently the growth has been almost continuous from the very time of setting out.

It is quite an interesting study to note the great difference of habit that exists between the varieties, Silver Spray, for instance, seems bound to start upwards and it is only by dint of constant attention that this sort can be made to keep

any where near the ground, while Tidal Wave raised and sent out by the same firm, hugs the ground so closely that it does not appear to have a leg to stand on. Portia is also pretty much of the latter habit, while Grace Wilder if not watched closely is liable to wander off and become somewhat scraggy; drawing out the center of the main shoot early in the season, however, brings her ladyship to terms and will greatly aid in forming the basis of a stock plant.

It is important at this time of the year to look closely to the plants from time to time, say once a week at least, removing all buds that appear, also all shoots that show a tendency to start off into flower; constant practice of this kind will greatly assist in attaining a uniform growth, so that when the time comes for the regular August or September stopping an even field presents itself for our work. It is also very important that the ground be kept free from weeds; keep the hoe moving and mind that no grass or other weeds are allowed to establish themselves near the stem of the plant, as such can only be removed when large at the risk of disturbing the plant.

August is the month when carnations seem to enjoy themselves to the very fullest extent, the cool dewy nights of that month appear to act as a double stimulant, under the exhilarating effects of which they seem fairly to advance at the double quick. H. E. CHITTY.

Paterson, N. J., July 28, 1890.

Exhibit of Hardy Flowers.

We present herewith an illustration from a photograph of an exhibit of hardy flowers shown by Charles L. Burr at the annual exhibition of the Springfield Amateur Horticultural Society, Springfield, Mass.

Among the flowers shown were *Digitalis hybrida*, *peonias* in variety, twenty-five varieties of German iris, *galliardias* in variety, *Dictamnus fraxinella* alba, *Coryopsis lanceolata*, single pyrethrums in variety, *Potentilla formosa*, *Scabiosa caucasica*, *campanulas* in variety, Iceland poppies (*Papaver nudicaule*), oriental poppies, sweet williams in variety, lilies in variety, *Delphinium caschmieranum*, *aquequias* in variety, *Spiraea VanHouttei* and *Japonica*, honeysuckles, and a large collection of hybrid remontant roses.

Long Island Notes.

BY WM. FALCONER.

DOUBLE ZINZIA, TOM THUMB.—After a few more years' careful selection no doubt we may get something good, but now, apart from dwarfness, the little chap is poor enough.

DICTAMNUS FRAXINELLA.—If you want to get up a stock of young plants get some of this year's ripened seed and sow it at once; if you wait till next spring you may get disappointed.

DOUBLE PYRETHRUMS are hardy enough if grown on raised beds or thoroughly well drained ground. If your land is not of this kind make up a raised bed and lift, divide and replant the pyrethrums now, so as to give them a good chance to get well rooted before winter.

FRESIAS.—These are bulbs that don't deteriorate by cultivation, they rather improve and multiply exceedingly.

VERBENAS FROM SEED.—Friend Miller who grows about half an acre of mammoth verbenas for seed never sows seed from blues or purples, and still in the next year's crop he always gets a moderate percentage of these colors. The

brighter and purer the colors the more favored they are.

FRANCOA RAMOSA is a Chilean saxifrage and a very desirable greenhouse flowering plant. I raised a lot of it from seed last spring and planted them out in May and lost nearly all of them. Better to have grown them in pots and kept them indoors or in frames.

THERE IS MONEY IN CACTUSES.—Mr. E. S. Miller, of Floral Park, the most successful propagator of cactuses in the country, will read an essay on succulents at the Boston meeting. Now, if you want to know anything about cactuses, the most desirable kinds to handle and how to propagate them, and where to get the kinds you can not readily propagate at home, and any other pertinent questions you please, come prepared, and when you get Mr. Miller on the stand remember "He that questioneth much shall learn much."

TUBEROUS BEGONIAS.—The finest lot that I have seen this year are growing, planted out, in cold frames covered with sashes which are whitewashed and ventilated by being tilted up at the sides.

CHINA ASTERS.—Veitch's Empress and Burpee's White Queen are our earliest asters. Both are of dwarf, even compact form, very prolific and bear large, full double, pure white flowers of the finest kind. I don't see any difference between the two.

CLEMATIS DAVIDIANA is one of our best, non-climbing, hardy, herbaceous sorts, and it now is in full bloom. The flowers are blue, small, crowded into terminal and axillary bunches and very fragrant. I have always propagated it by division and also by root cuttings. But I was at Hallow's the other day and there saw thousands upon thousands of thrifty young plants that were raised from seed. It has never ripened seed with me, and we have a good many large, old, stock plants of it.

SINGLE HOLLYHOCKS.—No doubt it is because of my crude and uncultivated taste that I have no favor for these. And I know in hollyhock season that the double flowers only are sought for and this too by people who pride themselves upon their fine esthetic taste. From seed sown now we can get up a nice stock of young plants that we can winter over in little space in cold frames and plant out in spring to give us good flowering stock next summer.

MONTEBRETIA CROCOSMIFLORA.—"Let me give you a point in growing it," said Dr. Wolcott Gibbs, of Newport, to me the other day. "Leave it outside in the ground over winter and mulch it deeply." "I had a surplus last year and I did that, Doctor," I replied, "and the field mice had a perfect heaven there, cut to pieces every corn and honey-combed the ground." "Field mice! why we don't have any of them at Newport," he answered. Just so, Doctor, different conditions demand different treatment.

THE DOUBLE-FLORING CORN FLOWER.—I have lost all charity for this wretch and pronounce it the most unmitigated humbug offered this season among general novelties.

SALVIA SPLENDENS var. Ingenue. Clavenad is a novelty this year. We are told that its blooms appear two months earlier than those of the ordinary *S. splendens*. But this is not so. I tried *S. splendens* as an annual, sowing it in March and again in April for planting outside. I treated Clavenad in the same way, and both came into bloom at the

EXHIBIT OF HARDY FLOWERS

same time, and in any other respect I fail to find any difference between them. Pot grown plants of both came into bloom at ten weeks old.

THE DWARF gladiolus-flowered cannas have come to stay. But it isn't all gold that glitters. What with ripening seed, spent flower spikes and withered and decaying blossoms, these cannas in their most flourishing days display a good deal of raggedness. And if we would keep them looking their prettiest we should pick the dead flowers off every day.

SAVE YOUR canna seed and sow it and try to get something unusually good and new. Most of them set seeds freely and the young plants bloom the first year from seed. Don't think that all the good cannas are raised in France, the finest gladiolus-flowered canna in existence, so far as I know, has been raised from seed in America.

"ARTEMISIA ANNUA" furnishes "a great quantity of its charming foliage and beautiful green sprays of tiny buds, and of such delightful fragrance." No doubt opinions differ, and mine is this: This annual is a rank and stinking weed, objectionable as a garden plant and inadmissible among cut flowers.

"Ah, 'John' ah, 'John' thou'lt get thy fairin; In hell they'll roast thee like a herrie!"

TAM O'SHANTER.

Not a bit of it. I have just learned that you have given to the M. E. Church

Society of your village the ground on which to build a new church, also donated \$1,000 in cash to them to help build the church. This generosity we will accept in extenuation for your highly fragrant chamomile, your "Great Cyclone Plant" and your misnamed "Ipomoea gracilis."

"THE LAST" NOVELTY.—Henry Camell of England, has got a double-flowered calycanthema Canterbury bell, which he illustrates and describes in his catalogue this year. He styles it "The Last," and feeling assured of his safety placidly informs us that he won't be able to offer it for sale for three years to come. It may be interesting news to Mr. Camell that he is not alone in the possession of this novelty, I have got it in full bloom now (August 4) and it has been continuously in bloom since the middle of June last, and a friend at Flushing to whom I gave some plants also has it in flower. The three years' grace, if it will last for three years, consists in the great difficulty we experience in getting the plants to set seed; instead of setting seed like most any other Canterbury bell it keeps up a desultory blooming of misshapen flowers and ignores our anxiety for a crop of seed.

The Springfield, Mass., Amateur Horticultural Society.

This is a popular society, gotten up and conducted on popular principles. A prominent member of the society writes to me regarding it, and as his letter con-

tains a good deal of what is novel and suggestive in the getting up of a horticultural society, with his permission, I append the following:

"Our society is only eighteen months old, it was organized a year ago last January. It has over 400 members. The life-membership fees are 50 cents for men, and 25 cents for women. We have no annual dues, and have got to make all our money from our exhibitions, and joining the society. And instead of being bankrupt, as one might think, we have about \$400 to our credit. Besides paying our expenses we have one of the nicest little halls in the city that we hire and hold meetings—two a month—in for discussion of fruits, flowers, etc. Our great success is due to our interested, active members. We have got most all of the people who grow flowers to join the society, and when they came to the meetings they got interested and came again and so the thing has prospered. I think that every city of 10,000 or more people should have a society of this kind. On account of the great interest in flowers that has been inspired by this society, there has been an immense increase in the quantity of flowers planted in this city this season, over what was ever planted in it in any previous year. Our exhibition last month (June) was a grand success in every way, and we cleared between \$200 and \$300. We placed our tickets at the low rate of 10 cents each, and we had a large attendance." W. F.

A Rare Orchid.

A visit to the famous orchid "rendezvous" of W. S. Kimball, Rochester, N. Y., always reveals some unique and scarce orchids which his excellent "lieutenant," George Savage, has brought to the highest degree of perfection. The plant in question, *Renanthera Storiei* (Storie's), syn. *nephrolepis*, a relation of the grand vanda family of which *Vanda Sunderiana* is the most striking, was introduced from the Philippines about nine years ago. It is exceedingly rare and seldom in a healthy condition. W. S. Kimball's plant would give a reverse idea. It measures 8 feet in height, and when seen in flower bore an immense spike of flowers 2 feet in length and branching considerably. It could not have borne less than 110 flowers which were more than 2 inches across. Dorsal sepal and petals dark orange, lower sepal broad, of a brilliant crimson, lip small, deep crimson with small yellow bars.

Beside the above there were a great many species and varieties in flower, including grand varieties of *Odontoglossums*, of which *Harryana* was the most distinct. Some fine specimens of *Cattleya aurea*, the most beautiful of the golden cattleyas. The rare *C. Manglesii*, a delightful hybrid between *C. labiata* Luddmanniana X *C. Loddigesii*. The *lilias* were also represented by *L. xanthina*, *L. amanda*, a supposed natural hybrid, probably *C. intermedia* as one parent, the other with equal probability being *L. crispa* or *L. lobata*.

A grand galaxy of cypripediums was also in flower, the most prominent of which was a peculiarly tinted variety of *C. Curtisii*, etc., etc. A great many other species and varieties too numerous to mention were also looking their best.

The lily pond upon which great attention is bestowed, is filled with all the leading aquatics. The *Nelumbium speciosum* was apparently at home, as was also the ancient paper reed of Egypt, *Papyrus antiquorum*, used in the time of the Pharaohs. Among the last things we noted was a remarkable specimen of the Dutchman's pipe, *Aristolochia ridicula*, the latter name describing it to a T.

H. A. BUNYARD.

Mass. Hort. Society.

A delegation from the committee of arrangements went on a tour of inspection to the incomparable orchid houses of F. L. Ames and E. W. Gilmore at North Easton recently.

Wm. Robinson, gardener for Mr. Ames, acted as conductor and entertainer on this occasion, and the committee were well pleased with what they saw and enjoyed. Probably there is no one in this vicinity who is such an adept in growing orchids as Mr. Robinson, and it is a real pleasure to listen to his enthusiasm when going the round of the numerous houses over which he so ably presides. Although this is usually the barren season when but few orchids are in bloom, yet we saw some very fine specimens. A *Lycaste Deppii* with 100 blossoms was a fine plant. Some 15 varieties of cypripediums in bloom, one of which, *C. Wallisi*, was

exceedingly beautiful, the outside of the slipper being a soft buff in color and the inside white morocco with pendent petals two feet long. The cattleyas were in flower to some extent, there being 25 varieties showing bloom. The most beautiful one was *C. Dowiana*, a buff and crimson flower of superior elegance. *Epidendrum radicans* had been in continuous flower since February. *Oncidium Zebrium* was showing a flower stalk over 20 feet long and promised a fine effect when the buds expand. *Odontoglossums* and *masdevallias* in great numbers were in fine bloom, also *anacraums*, *vandas* and *cyclobambas*.

In the plant houses we found a great variety of plants in flower, such as tuberous begonias, *lapageria*, both *rubra* and *alba*, *gloxinias*, etc., intermixed with fine foliage plants, making one of the finest collections in the country.

Mr. Ames' houses and grounds are always open to the public and can be visited at all times, and visitors will always find there curiosities in plants and flowers that can not be found in any other collection. We were welcomed at Mr. Gilmore's by Mr. Greaves, but as our time was limited we made only a hurried survey. The usual neatness was manifest, and the orchids and plants presented a very healthy appearance and considerable bloom. Mr. Gilmore's houses are not nearly as extensive as Mr. Ames', but his collection has been made with great care and with a view of growing only the best in the limited space he devotes to plant culture. Both places are open to the public and visitors are always welcome.

Onesels and Onesels.

Conducted by CHARLES F. BAKER, Agricultural College P. O., Ingham Co., Mich.
Send specimens of unidentified insects and diseased plants to him at above address.

The Red Spider.

(*Tetranychus telarius*, Linn.)

Perhaps no insect can so vex the florist, when circumstances allow, as the red spider (*T. telarius*, Linn.). Almost every florist has had it to deal with and each can attest to the destructive character of its work. Leaves of plants in the greenhouse and garden, especially roses, are sometimes seen to be covered with yellow blotches. These may be due to some fungus, but more often, if closely examined with a magnifier, may be found to be covered with large numbers of the red spider in different stages of growth.

The systematic class *Arachnida* includes spiders, scorpions and mites, the last named constituting the order *Acari*. This order is divided into a number of families as follows: the *Trombididae*, including spinning and harvest mites; the *Bdellidae*, including snouted harvest mites; the *Hydrachnidae*, including water mites; the *Gamasidae*, including insect mite-parasites; the *Oxodidae*, including the ticks; the *Halacaridae*, including the marine mites; the *Oribatidae*, including the beetle mites, and the *Acariidae*, including subcutaneous, cheese, itch and gall mites. These families contain many very common and troublesome but interesting species. The *Arachnida* are not true insects and are distinguished from them in having four pair of legs instead of three, in having only two divisions to the body, a head-thorax and abdomen, instead of three, a head, thorax and abdomen, and in having no antennae and also no com-

pound eyes, but a number of simple ones. The mites are separated from the spiders and scorpions by several very striking characteristics. The mites never have the abdomen unpunctuated (joined to the thorax by a slender tube) like the spiders and their whole bodies are in one piece, there being no grooves to mark the places of separation. Of the family *Trombididae*, which contains the most highly organized species of *Acarina*, the red spider is a type. It is one of the best examples of the spinning mites. It is on account of this habit of spinning webs that it came to be called a spider, which in truth it is not.

The red spider (see Fig. 1) is a very minute insect, only one twenty-fourth of an inch in length, thus appearing to the naked eye like an animated speck. In color it varies from rust red to brick red and has two brownish yellow spots on the sides. The yellowish and green forms which are often found are probably simply immature. As the coats of the body are nearly transparent any colored material in the stomach would give a different appearance to the insect. The reddish colored individuals are the most familiar to the florist. Duges found on the hollyhock at the same time specimens of all shades of color. Johnston observed that on the grape vine their color varied much in intensity. This great variation at first led scientists to think them of different species, but they were afterwards supposed to be the same species, and this was proved by breeding them. These results might never have been obtained had color been taken as a species characteristic. Whether of the same species or not does not make any material difference to the florist, as they are all equally destructive. The body is oval in shape, with two pair of legs projecting forward and two back, the first pair of front legs being the longest. The eyes are two in number and very minute. Just under the hind portion of the body is a small conical projection, which is the spinning organ. The mandibles are short, and with their scissor-like terminal joints are fitted for cutting. Just between the mandibles is a barbed sucking apparatus. The mite eats away a portion of the leaf-skin by means of the mandibles and then plunging in its barbed sucker it draws up the cell contents. The appearance and relative positions of the mouth parts may be seen in Fig. 2, which shows the mouth and palpi, one mandible and the barbed sucker. The claws (see Fig. 3) are specially adapted to help in spinning the web, being very short, much curved and furnished with long stiff hairs, some of which may be very finely tipped with globular appendages. The legs are supposed by some to be an essential part of the spinning apparatus, on account of the claws and their hairs being used only in this connection. The threads are drawn out and guided by the motions of the insect, its feet moving with great agility. The movements of the insect itself, however, are not at all quick, and on smooth or polished surfaces it moves with great difficulty.

The egg of the red spider is spherical and colorless, and the size is proportionate to the size of the insect. In eight days the mite (see Fig. 4) hatches out. It is then exceedingly small, transparent, very light in color and, unlike the parent, has only three pairs of legs. After attaining maturity it sheds its skin when the fourth pair of legs appears. Duges says that undoubtedly it passes a short time just at this period in the immovable pupa state. The eggs are laid and the insects spend their lives on the under side of the

leaf, occurring on the upper side only by accident. When established on a leaf they spin a web, fastening the threads to hairs and prominences on the surface of the leaf. While doing this they support themselves by means of bristles which jut out beyond the claw. The threads are so fine that they can not be seen even with a common magnifier until after being worked into the web. If we examine the surface of the leaf beneath the web by means of a magnifier we should find hundreds of the red spiders in all

Fig. 1. (After Claeprede.)

stages of growth, from the egg to the perfect insect. It is not the feeding of a few that causes the injury, but of myriads. The leaves assume a yellowish color, or grayish green, marbled with paler patches above, while below the glistening web gives it a grayish appearance. The injury is not only shown on the present growth of leaves and flowers, but during the next year the twigs become stunted and weakened. The leaves are ultimately killed and fall prematurely. Sometimes their work causes the edges of the leaves to roll under slightly. In fact, it causes the whole plant to become sickly and finally die. The fact of their having been

Fig. 2. (After Claeprede.)

found under stones in October caused Duges to believe that they passed the winter in that or similar situations, concealing themselves when the infested leaves fall.

The red spider is probably found to a greater extent on roses than on any other plant, although there is hardly any tender garden or greenhouse plant that is exempt from its attacks. In Europe several species of fruit trees are subject to its attack, and in this country it has been found on the plum and quince. Other plants which have been injured by it are hollyhock, calla, viola, Spiræa Thunbergii, mitella, tropeolum, adlumina, bean and nasturtium.

The fact that often the red spider will get a firm foothold before discovered, would warn us to keep a sharp outlook for them. It might be given as a general rule that any plant showing a sickly appearance should at once be separated

from the rest, the cause ascertained and then be specially treated. The red spider thrives only in a hot, dry atmosphere. It is never found in numbers sufficient to be injurious in a moist atmosphere and a low temperature. This at once points out a good preventive. Means should be employed to keep the atmosphere moist and free access given to fresh air. Plants regularly and thoroughly sprayed will not be attacked, and all plants in glass and not in flower should be so sprayed. The presence of large numbers of the red spider then is indicative of ill treatment. Sulphur has probably been used more widely as a remedy than any other substance. This may be used in fumes, in solution or dry. It is not used very often, as the other methods are much more preferable. The solution is made by mixing one pound of sulphur and two pounds of quicklime and boiling the mixture in four gallons of water. Sulphuret of lime is also used by mixing four ounces of the sulphuret, two ounces of soft soap and one gallon of boiling water. The sulphuret and soap should be mixed and stirred while the water is poured in. It should be applied to plants by dipping them in it and to bark with a stiff brush. Sulphur should not be burnt in any quantity. It will exterminate the red spider, but is liable to also injure the plants, and so should only be used when the house is empty or else in very small quantities, which does not always answer the purpose. Painting the blighting pipes with a wash of sulphur and lime or sulphur and guano has been very successfully tried. The lime and guano are used to bring the wash to the proper consistency. This should be repeated every eight or ten days. This in connection with repeated forcible syringing of the plants will usually soon reduce the number of red spiders to a minimum. In order to prevent them from traveling to other plants by crawling up the stems, soot, caustic lime, sand impregnated with sulphur of tar, or any similar substance should be scattered around the base of the plant. When an infested house has been emptied of its plants sulphur may be burned so as to kill all the mites left. Then all cracks in poles or other supports and in the sides of the walls should be puttied so as to prevent any of the mites crawling in and to admit of a more thorough washing. The following mixture has been very successfully used in cleaning the walls: Add clay to a solution of soot in water until it is of about the consistency of thick paint. Then add one pound of flowers of sulphur or two ounces of soft soap to each gallon. This should be well mixed and the entire surface of the inside walls carefully painted with it. Tobacco smoke seems to have no effect on the red spider. Kerosene emulsion has been experimented with as a remedy, but no definite conclusions have been arrived at as yet. Prof. Lintner says it could not fail of accomplishing its purpose if it was properly applied. In the application of any liquid care should be taken to have it applied thoroughly and with force so as to reach the underside of every leaf. A few applications of whale oil soap in warm soft water will accomplish much. If this is used it should be applied late in the afternoon and the plants washed off the next morning with pure water. Gishurst's compound and solution of quassia have also been successfully used. The gardener and florist are often assisted in their warfare against the red spider by the larvae of the green lace-wing (*Chrysopa*). These devour the mites so fast and in such large numbers

that entire colonies will sometimes disappear before them.

T. telarius is not the only species of the genus that is troublesome to the florist and gardener. *T. cucumeris* works on the cucumber; *T. russulus* on cacti; *T. vitis* on the grape vine; *T. fici* on the fig; *T. socius* on clover; *T. rosarum* on the rose tree; *T. ferrugineus* in greenhouses on *Cyclamen*, *Comm.* and *perisperm*; *T. tiliarium* on the lime tree, and *T. autumnalis* on a variety of plants and also

Fig. 4. (After Claeprede.)

on human beings. In general what has been said of *T. telarius* will also apply to these.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XV.

ATTACHING AND ENJOINING.

You appear to be very much excited. Calm yourself and get down to facts. You say you have information that Sharp & Keane are secretly disposing of their property with intent to defraud their creditors. They owe you \$500 do they? On a contract I suppose. "Stocking their skating rink with ornamental plants and flowers and keeping the same in order" the bill reads I see. Well, you must attach at once.

In other words make a grab; such a grab as the law allows when the debtor is not a resident of the state, or being a resident has absconded, or concealed him-

Fig. 5. (After Claeprede.)

self to avoid payment of his debts or is secretly disposing of his property with intent to defraud. Your attorney will attend to the details. It will be necessary to give security before the court will grant you the order. Then the officer will proceed to make his levy and out of the proceeds of the sale, your claim will be satisfied. If there are several ahead of you, the chances are you will get nothing. In this world the first man is the best man. The law always awards a good fat worm to the early riser. I hope you will be the first to make a grab. We shall know in a few days.

In business matters it is often an easy matter to sell goods, especially on credit. The science of the thing is to collect your money. Now there are several ways to reach men like Sharp & Keane. Attachment is one. Arrest is another. Of course where the property is visible and tangible it is an easy matter to make levy. But sometimes the property consists of an interest in a corporation, money in bank,

etc. In such cases the sheriff merely serves a certified copy of the attachment on the president or cashier of the bank. That forces the bank to hold the money until judgment can be procured. Now if you know where these men, or either of them, have any interest in a stock company, you must attach it. You're right, you cannot attach property exempt by law.

Suppose as you say, you only find enough property to pay one-half of your claim, what then? Why, that amounts only to payment on account of so much money. The balance of your account still hangs over them. It is natural that some attachments should fail to "stick" as the lawyers call it. The party makes counter affidavits denying your charges and then it becomes a nice fight.

In most of our states whenever there has been a "conversion" an attachment will lie. By "conversion" I mean a fraudulent application of funds or property entrusted to your keeping for a specific purpose and no other. For instance, you loan me money on some personal property, I give you back a chattel mortgage and then you sell or remove the property, in other words "convert" it to your own use.

You ask me to explain the difference between attach and enjoin. They are quite different. Suppose some man bought a lot next door to you and began to manufacture some kind of an acid, the fumes of which killed all your flowers, you would be entitled to an injunction.

An injunction is tying up a wrong doer until the court can hear and determine the whole matter. Then the injunction is either dissolved or made permanent. Before the law will permit you to stop a man's business you must make out a strong case. It must not be speculative. It must state facts.

But in some cases you need not wait until the damage has been done. That would be too late. It is only sufficient that the person having the power to do the damage threatens to do it. That's all. For instance, the manufacture of acid next door to you might not injure you, so you must wait for developments. But if you had been engaged to a young lady and she had written you a number of letters and then there had come a break—a mere threat on your part to publish the letters would entitle her to an injunction. For you see the publication once made no act of the law could undo the harm. Now you have a trade mark which you use on your seeds. Here a mere threat to imitate would not entitle you to enjoin a person, but an actual imitation of your trade mark would.

But with injunctions as with attachments, the law exacts that you shall move quickly and not sleep on your rights. By so doing you appear to give and do give in the eyes of the law a permission to do the thing afterward complained of. I trust you'll not be obliged to have frequent recourse to either of these remedies, but when the occasion arises strike quick and strike hard. Often an attachment or injunction will at once bring the party to terms and he will step up and settle like a little man.

You've been long enough in business to know that a man rarely gets his rights unless he fights for them. Therefore without being too belligerent don't hesitate to demand what lawfully belongs to you. All the world loves a good fighter.

UNCLE BLACKSTONE.

SEE LIST of hotels at which arrangements have been made for delegates in another column.

CARLUDOVICA PALMÆFOLIA.

Carludovica Palmæfolia.

When a specimen of this plant was exhibited at the meeting of the Royal Horticultural Society on August 27, 1889, says the *Journal of Horticulture*, the Floral Committee at once awarded a first class certificate for it, a recognition that was well deserved, as the plant will evidently prove most useful.

Several fine *Carludovicia* are in cultivation and occasionally make their appearance at exhibitions in collections of fine foliage plants, where they have a capital effect. They are also sometimes employed in sub-tropical gardens, particularly *C. palmata*, which is of strong habit and well suited for that purpose.

The species represented in the illustration is one of the most elegant known, producing leaves 2 feet long and 1 foot wide at the broadest part deeply divided, and the divisions 4 to 6 inches across. It is a fine lovely green, and the arching leaves give the plant a graceful appearance. It will succeed in a stove or intermediate house in a compost of peat, loam and sand.

The *Carludovicia* are easily mistaken for palms, which they closely resemble, but they are regarded as the botanical allies of the screw-pine (*pandanus*) family.

Philadelphia.

Business is at a standstill at present and the boys are filling in the time with little trips to the seashore, fishing, howling, base ball, etc.

We are informed that in New York and certain parts of Jersey the bowling fever is very prevalent, it is hoped, however, the trip to Boston will afford some relief.

Quite a number of New York and Philadelphia brothers meet at a quiet resort on Barnegat Bay for a week's fishing about the first of August each year. This season the party comprised Messrs. May and son, Asmus and sons, Cowan, Wethered, Dimmock, Young and Dean, of New York, and Westcott, wife and son, Harris, Craig and Kitt, of Philadelphia. John Westcott was Commodore and how he did manage things. In the words of the song "Oh he is a jolly good fellow." The

VASE OF AURATUM LILIES ARRANGED AND PHOTOGRAPHED BY C. B. WHITNALL.
MILWAUKEE, WIS.

fishing was very good. Messrs. May, Westcott and Harris carried off the honors in the shape of large fish, while Cowan and Craig were strong on crabs.

Mr. Chas. Evans has just returned from a trip to Boston via the all-water route. He believes the boys will have an elegant time at the Hub; but the all-water route he found to be very undulating and he would not advise it.

The stable at Mr. George C. Evans' place was struck by lightning recently and set on fire; fortunately there was plenty of help at hand and the flames were soon extinguished without much damage.

A game of base ball between the florists and a nine composed of the employees of Messrs. Lonsdale and Burton, was played near their nurseries on Saturday, August 9, resulting in a score of 14 to 7 in favor of the florists. Quite a number of the trade were present and the lunch presented after the game was much enjoyed.

Mr. Watson, of Messrs. Gardiner & Co.,

was given a complimentary dinner by a number of his friends in the trade on his return from Europe a few days ago, it was a very enjoyable occasion.

W. L. Edwards, of Norwood, is erecting two houses 24x125. His specialty is cavations.

J. W. Colflesh is erecting a large addition to his dwelling.

Chrysanthemums in this neighborhood look very fine, the stocks appear immense, but the growers seem sure of a market if the plants do well.

A sure cure for the blues, a small bottle of Dan Farson's "Essence of Fun." B.

BALTIMORE.—James Pentland has a seedling pandanus, found in a batch of utills, which while identical in habit, is in color a rich gold shaded with lemon and with here and there a vein of red, toward the midrib, margined with green. It is a very striking object. Mr. Pentland has grown the plant three years, and during that time it has shown no ten-

dency to run back. He is justly proud of his "find" and has placed the plant among those marked "not for sale."

The August Meeting of the G. and F. Club of Boston.

A big crowd.

Some had to stand up.

Mr. Flynn asked several conundrums.

Frank Becker was full of enthusiasm.

Norton's generosity was all right until somebody stole his trump card.

L. H. Foster placed the club under obligations by agreeing to act as convention secretary.

Cunningham's dignity received much favorable comment.

Mr. Morton's earnest attention to details was only equalled by Pres. Calder's anxiety to explain everything.

Members in good standing can now salute the back-sliders with "I told you so."

The ladies at a Boston Gardeners' and Florists' excursion. Well "the world do move."

Mr. Sam Neil was quietly argumentative and Ward, of Salem, gave him good natured encouragement.

The committee which had just returned from a tour of inspection of the harbor showed no signs excepting a little sun-burn.

Treasurer Welch had a look of serious responsibility on his face. The treasury must be getting heavy just about this time.

W. J. S.

Transportation of Plants.

John Burton, a florist at Chestnut Hill, has brought suit against the United States Express Company to recover damages. Burton, in his statement of claim, says that on December 3, 1889, the express company undertook to transport for him from Chestnut Hill to New York City eighteen palm plants, twelve to be delivered to one address and six to another. The company carried the palms to New York, but the persons to whom they were consigned refused to accept them because they were frozen, and they were returned to Burton and he tried all means in his power to save them, but found them to be utterly worthless. He says that on the night of December 3 and the morning of December 4 the weather became intensely cold, and the freezing and destruction of the palms was due to the negligence of the express company, which hauled them through the streets of New York City in an open wagon, unprotected, in violation of their agreement that they would transport them safely. He therefore brings this suit to recover the loss sustained by him.—*Philadelphia Ledger*.

Boarding Plants.

With the increased use of large decorative plants, such as palms, agaves, etc., as lawn or verandah ornaments during the summer, comes a demand for greenhouse space during the winter to carry over such to the following season, and in some cities "boarding" plants through the winter has come to be quite a considerable item of the florists' business. This division of the business has not as yet been systematized to any extent in most places, the memory, wood labels and rough memoranda being largely relied upon. And in view of this we present as a suggestion a copy of a storage receipt used by Messrs. C. B. Whitnall & Co., of Milwaukee, in this department of their

No.

STORAGE RECEIPT.

Board Book Folio.

C. B. WHITNALL & CO.,

OFFICE: 428 MILWAUKEE ST.

Milwaukee, 18.....

Received of the following Plants:

NAMES OF PLANTS.

SPECIAL DESCRIPTION.

Pounds weight. Sq. ft. will occy.

(All plants in pots 8 inches and under will be 10 cents regardless of size or weight.)

Total.

..... pounds @ for labor, handling, etc.

Storage, feet of Greenhouse space @ for

Which are of the weight and size as written above, and which in consideration of the payment to us of \$..... for storage and labor charges, and for their proper care and keeping to the best of our ability during said season, we agree to deliver up to said upon surrender of this receipt at or before the expiration of eight months from the date hereof, at such place in the city of Milwaukee as may be directed, in good condition; loss or damage, if any, by fire, from water, hail, burglary or unprecedented storm or weather not being assumed by us.

Said \$..... to be paid to us at the time of delivery of said property at the expiration of said eight months; and it is further agreed that in case said property shall remain unclaimed beyond the period of eight months aforesaid, such failure to claim said property shall be construed as a further contract of Storage for an additional period of eight months, upon like terms above mentioned, for Storage only, omitting charges for labor and handling, viz: \$..... and that we shall at all times have a lien upon said property for the storage charges above described.

SIGNED

business. The blank receipts are found in book form, numbered and attached to stubs likewise numbered and with spaces for entering the date, name of party to whom receipt is given, names of plants, total weight and total square feet to be occupied by same and total charges. Also board book folio. The "board book" is provided with headings for date received, number and names of plants, description of same, how long to be kept, price to be charged, special charges, pots, boxes, extra labor, etc., date returned and total charges, thus making the record of all items complete. The system should certainly commend itself to all who "board" plants in any considerable numbers.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—Young man; single; good references; 3 years' experience. Address A. S. NICOL, Kingston, Luz. Co., Pa.

SITUATION WANTED—By October 1st in floral store by experienced German lady. References as to ability given. Address F. A. care Am. Florist.

SITUATION WANTED—By a florist of large experience, understands perfectly rose growing, bulb forcing and propagating. Address A. care American Florist.

SITUATION WANTED—By a young Scotchman in a good commercial or private place; 9 years experience; first class recommendations. Address K. care American Florist.

SITUATION WANTED—As propagator of roses and other florist stock. First-class reference as to ability, etc. Married. Address F. B. care American Florist, Chicago.

THE WORLD'S COLUMBIAN EXPOSITION.

In the July number of the *American Garden* we are instructed that the "horticultural interests of a World's Fair are worthy of a broader conception and treatment than our horticulturists have proposed for them." There should be a great ulterior aim in the project, but this seems farther above the conception of some advocates of an horticultural exposition than are the clouds above the tree tops. * * * It is evident that the leadership of this great enterprise should fall to the Department of Agriculture, for the department alone can furnish the inspiration and the impetus (the italics are ours). And in commenting on the nomination by the Chicago Florist Club of its president as Director of the Horticultural Department the *Garden* tells us that "if it is expected he shall assume the whole leadership of the enterprise it is fatal." The boldest comprehensiveness should characterize this endeavor.

We must admit ignorance of the views mentioned by the *Garden* as held by "some advocates of an horticultural exposition." Neither in Chicago nor in the east have we heard any narrow views expressed concerning the World's Columbian Exposition. We most heartily agree with the editor of the *American Garden* as to the necessity for a "broad conception" a "great ulterior aim" and a "bold comprehensiveness," but *why* the Department of Agriculture can alone furnish the inspiration for our horticultural department, and *why* it will be "fatal" for the leadership to be assumed by the nominee of the Chicago Florist Club is by no means made clear to us.

Granting unhesitatingly the necessity for the assistance of specialists and the value of the co-operation of a great international horticultural congress, yet it can not be denied that there must be executive leadership, some one man must be at the head, and when the editor of the *Garden* declares so emphatically that it would be fatal for that man to be the president of the Chicago Florist Club he must have some reason for this assertion. Either he must mean that he knows the candidate to be personally unfit and lacking in the needed broad gauge requirements, or else we must take him as intimating that it is impossible for any one calling himself a florist to have the bold comprehensiveness which should characterize this endeavor.

The Chicago Florist Club is composed of the combined nurserymen, gardeners and florists of Chicago and vicinity. Who can be more vitally interested than they in the success of the horticultural exhibit at the Columbian Exposition? Who should know better than they whether the west can furnish a leader capable of

making this exhibit a success? Their nominee is not wholly unknown outside of Chicago. He has received the cheerful endorsement of the leading florist clubs of the United States. The nurserymen and seedsman have not hesitated to endorse him. Has the editor of the *Garden* more vital interests at stake, or has he better sources of information than all these, enabling him to assert that the appointment of this particular man would be fatal? Or can it be possible he really seriously believes that the proper man can not be found outside the Department of Agriculture? The florists and the Florist Clubs of the country we believe are entitled to an explanation of the implied slur on their calling. V.

ILL-NATURED CRITICISMS.

In the August number of the *American Garden*, under the heading "Sub-Rosa," appear some comments upon the Society of American Florists which are a vast sight more disgraceful than was the unfortunate Hudson River excursion, the skeleton of which the editor has seen fit to drag from its grave.

The editor of the periodical named says he has "met before with the florists and was disappointed." He "found the convention an unwieldy mass, prone to claptrap."

We don't know how many of the conventions of the S. A. F. he has attended, but as he assumes to know what he is talking about, we presume he must have attended several. In any event his comments are direct insults to the members of a society which has more life and vim in it, and which has accomplished more solid, practical, really beneficial work in one session than any similar organization has in a decade.

Wherein has he found the convention an "unwieldy mass?" Has he found it the least particle more unwieldy than any other society with an equally large membership? Is the large membership a detriment? It is true that the majority of the members are "Hale fellows welmet," and to this fact may be attributed much of the success of the society. The members are not a lot of stiff-backed, theoretical visionaries—they are intensely practical and are not strangers to the art of combining recreation with instruction. Can it be possible that the writer of these insulting paragraphs understands the meaning of the word "claptrap?" Either he does not, or else he is so bound up in his own ideas that there is no sight in his eyes. Let him name an organization whose membership is more earnest in its work than that of the Society of American Florists. Let him name an association which makes less display and accomplishes more substantial results.

"Let us purify it, give it definiteness, straight-forwardness, and dignity," says this critic. The imperfections of this inference would be intolerable if it were not laughable, coming as it does from this exponent of grandiloquent and impractical projects.

The Society of American Florists is not perfect. It is young. It doesn't profess to know everything, and it always welcomes practical suggestions. But it has been modest in its demeanor and that it should be singled out for such absurd and unjust criticism is indeed strange. The society is doing a splendid work and if the writer of these spiteful comments would attend faithfully to the work of the society with the "comprehensiveness" he is so prone to advocate, he would be enabled to add very materially to the

practical value of the periodical he conducts.

WE HAVE received from Mr. John F. Rupp, Shiremanstown, Pa., a description and pencil sketch of an odd freak of the fuchsia. There were two perfect flowers of the Arabella variety, but both joined to the same ovary.

WITH THIS ISSUE the AMERICAN FLORIST enters upon its sixth year, and we are pleased to say that it is with the prospect of being able to still further enlarge its field of usefulness to the florists of America.

The Florists' Hail Association of America will hold its fourth annual meeting at Horticultural Hall, Boston, Wednesday, August 20 at 6:30 p. m.

A. H. PHILA., will find the desired information in our trade directory, price \$2. We can not print portions of the book in these columns.

MR. L. R. KRAMER, Wooster, O., sends us a number of blooms of the spotted calla, all curiously malformed, most of them double.

THE BOSTON daily papers are already devoting considerable space to advance notices of the coming convention of the S. A. F.

Catalogues Received.

J. M. Thorburn & Co., New York, bulbs; Jno. Laing & Sons, London, Eng., roses; Ellwanger & Barry, Rochester, N. Y., strawberries; Godfrey Leubeuf, Argen-teuil, France, dahlias; Chas. D. ALBERT M. McVULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

ROCKFORD, ILL., AUG. 1.—The Geo. S. Haskell Seed Co. succeeds the firm of Geo. S. Haskell & Co.

J. A. EVERETT who recently failed at Indianapolis, is reported to be offering creditors 25 cents on the dollar for their claims.

S. F. LEONARD, of Chicago, suffered quite a loss by the burning of his storage seed house on the night of August 9, insured.

NEW YORK.—The Peter Henderson Co. of Jersey City, has filed certificates of organization in the office of the Secretary of State at Trenton. The capital stock is \$500,000, and the object is to grow, buy and sell seeds, plants and herbs, and the conducting of the business of horticulture, floriculture and agriculture. The stockholders are Alfred Henderson, Charles Henderson and Robert Little, of Jersey City.

Overhead Heating.

[From a paper read before the Buffalo Florists' Club, by E. S. Bartholomew, Westfield, N. Y.]

Our glass roofs, practically, are the same as a thin sheet of ice, whenever the outside temperature is below 32°, admitting the cold very rapidly. The question arises, where shall we place our radiation, so as to meet this cold air and prevent its coming in contact with the delicate foliage of the plants under cultivation, causing disease, mildew, etc. Shall it be near the glass overhead, or near the floor of the house? Common sense and reason would say, place the radiation where it will meet the cold air as soon as possible after entering the house, warming it, causing air currents, thus diffusing the radiated heat, giving a very even temperature through the entire house. If the cold air or frost, coming through the glass be met at once by the heat radiated from the suspended pipes overhead, there can be no danger from frost in any part of the house.

In order to test the question under discussion, in my mind, I instituted some experimental tests to ascertain whether by placing the radiating pipes beneath the benches, we obtain the best possible results in plant growth and blooms, and whether the cold coming through the glass did not too often reach the plants, doing injury to the foliage. Another question arose, whether by underheating we did not surround the roots of our plants with too high a temperature with a comparatively too low temperature of the atmosphere surrounding the tops, to give large blooms with good substance of the petals. To assist in forming my conclusions I instituted a series of experiments as to the comparative temperature of the soil surrounding the roots and tops of the plants while producing their most active growth and greatest amount of blooms, out of doors as well as under glass, the amount of moisture being equal or nearly so. The several thermometric tests made indicated from 10° to 20° difference between the temperature of the soil and the atmosphere, when the plants were making their most active growth, giving a profusion of blooms. The soil indicated from 40° to 50°, while

the atmosphere was from 55° to 70°. These tests were made during spring time. The result of these experiments was the conclusion that radiating pipes suspended near the glass would give results more like outdoor conditions than the low down radiation. Two years of experience with overhead radiation has given me even better results than I anticipated. I have also become more satisfied that most of the diseases of our plants in our plant houses are directly traceable to a violation of nature's law in the methods of heating and ventilating plant houses as at present practiced.

The advantages, I have found so far, are: First, it does not require so great an outlay for piping a house of lineal foot of 1½ inch for steam is equal to a lineal foot of 4-inch pipe for hot water underneath the benches. With steam at two pounds pressure I have found that a lineal foot of 1½-inch pipe will give sufficient radiation, if steam is used, for three square feet of glass; if hot water, then 1½-inch pipe is sufficient for the same amount of glass. This for zero outside and 60° inside.

Second, I have found by thermometrical tests that the heat is very much more evenly diffused throughout the entire house, even within two inches of the floor, even under the benches not to exceed three degrees lower than at six feet above the floor.

Third, air currents are formed much more completely than by underneath radiation. The pipes being suspended just beneath the glass, the heat radiated from them immediately comes in contact with the cold air sliding along just beneath the glass, imparts heat to it and as it passes the line of pipes in its descent it receives more heat, which it carries along imparting it slowly until the entire atmosphere of the house is evenly warmed, forming upward and downward currents.

Fourth, The molecular or wavy action given to the air just beneath the glass by the radiation of the heat from the pipes, seems to have the effect of intensifying the light as it passes through it, and this intensification gives a greater amount of radiant energy, thus assisting in the diffusion of heat tending to the equalization of temperature or equilibrium. That this intensified condition exists is shown by the fact that on very cloudy days, without any change in the thermometric condition of the pipes, while dark and after light appears, when the atmosphere is very densely cloudy, the thermometer, as the light increases, will show a rise of several degrees according to the intensity of the clouds. That this takes place, to some extent, with under radiation is true, but not to the extent of the overhead. This intensified light has very much to do with the greater vigor and healthfulness of plants, for it is a well known fact that the most healthful plants, the most intense coloring in blooms are found on that portion of the earth where the atmosphere is clearest and the greatest number of rays of light strike the earth on a given amount of surface.

Fifth, By the overhead system of heating plant houses the soil on the benches is warmed from the surface downward, just as we find it out of doors, the evaporation from the surface is slower, carries away the heat, the roots of the plants are therefore in a cool, moist soil, consequently healthier than where the heat is applied directly beneath the benches in a soil that is dry, a high temperature which forces the moisture rapidly away. Watering is not needed so copiously at each

watering, very rarely so as to run through.

I am of the opinion that the atmosphere is, as a whole, moister, yet I have not used a hygrometer or wet bulb thermometer to determine that fact, judging by the sense of feeling. From my two years experience in the use of overhead radiation, the healthfulness of my plants, the abundance and size of the blooms, I am very sure I shall not return to the old system of heating.

To those who are disposed to be critical or prejudiced against any innovation on old time ideas, I will simply say, that in plant houses where pipes are not used under the center benches, or where solid beds are used, they are warmed by the general principle involved in overhead heating, viz: by diffused radiated heat, and I feel quite assured that the plants so grown on them, have ever been quite as healthy and given quite as abundant blooms, at least I know of roses that have been planted twelve years in a solid bed and are at this time perfectly healthy and giving abundant blooms.

News Notes.

READING, PA.—No loss from hail here during the recent storm.

NEW YORK.—J. Arnot Penman has removed to 7 Warren street.

NEW YORK.—James Purdy, the wholesale florist, has removed to 112 West 40th street.

PHILADELPHIA.—The recent hail storms did not touch this city. No damage reported by any of the florists here.

PHILADELPHIA.—Mr. Ernst Kauffman will return from his European trip in time to attend the Boston convention.

NEW CASTLE, PA.—No hail fell here during the recent storm. Paul Butz & Son are building a new rose house 20x100.

DOWLESTOWN, PA.—Mr. John Y. Smith's loss from the June hail storm amounted to \$2,000. It was covered by insurance.

HELENA, MONT.—Mr. L. B. Wells, the florist, was killed recently by being thrown from his wagon by a runaway team.

CRETE, NEB.—Florist W. J. Hesser, of Plattsmouth, made a beautiful display at the State Fair here, which received much praise.

KALAMAZOO, MICH.—G. Van Bochove & Bro. have completed four new houses, two 80x20 each and two 100x20 each. All heated by steam.

SPRINGFIELD, MASS.—An elaborate floral design in the form of a horse car was recently arranged by Florist W. F. Gale for the funeral of a street railroad magnate.

PHILADELPHIA.—Final arrangements for the coming trip to Boston were made at the meeting of the Florists' Club on the 5th inst. The delegation from this city will number from 75 to 100.

ALLENTOWN, PA.—The only florist who suffered any damage by the recent storm in this section was A. B. Ellsworth who had several ventilators blown down. The storm was not accompanied by hail here.

WILLIAMSPORT, PA.—On July 14 this city was visited by a severe hail and wind storm. Evenden Bros. lost from \$1,000 to \$1,500 in glass and vegetables. Only one mile west Harry Chapin lost only 50 panes of single thick glass.

INDIANAPOLIS.—The Indiana State Fair will be held in this city September 22 to 27. Premiums to the amount of \$750 are offered in the floral department. The schedule for this department was submitted to and endorsed by the Society of Indiana Florists before being printed.

WELLSBORO, PA.—Florist W. H. Whiting reports that on July 20 the thermometer registered 32° and on July 21 42°, not raising above 71° during the day. On last Christmas day it stood 75°. With floods to June 1 and frosts in July crop prospects, excepting hay, are very poor.

NEWPORT, R. I.—Newport is to have a grand flower show early in September. The Casino governors are to manage the affair and they will meet all the losses, and should there be a surplus it will go into the Casino treasury. Newport will be able to make a creditable showing, and the exhibits will be well worth seeing.

ALBANY, N. Y.—Mr. F. Goldring, formerly at Mr. Corning's, has formed a partnership with Messrs. H. G. Eyres and S. Goldring under the firm name of F. Goldring & Co. The new firm have leased the greenhouse establishment of Col. Hendrick, who has retired from the business. There is about 50,000 feet of glass, now devoted principally to roses, carnations and violets, but large stocks of palms and ferns will soon be added. The concern will confine itself to the wholesale trade.

WICHITA, KAN.—The College Hill Floral Co. has leased the Fairmount greenhouses built by Farnum, of New Hampshire. The company will change their name to the Fairmount Floral Co. The above house is the best built of any house west of the Mississippi, it has 5,000 feet of best 16-inch double glass and is being fitted up for steam and will place a boiler able to carry any desired temperature. This will give the company 8,000 feet of glass. They propose also to put a store and greenhouse in the business portion of the city and will issue a wholesale and retail catalogue January 1.

NORRISTOWN, PA.—A storm of unusual severity passed over Norristown on the evening of July 18 about fifteen minutes past six and lasting about fifteen minutes, doing much damage to skylights and garden plants. No such hail as fell has been seen about here for over 30 years. After the first heavy dash of rain hailstones the size of pensils, increasing in size, however, until they were as big as hickory nuts. Many of the hail stones were beautiful specimens. In the center of each was a nucleus of snow surrounded by clear ice through which radiated numerous little fissures. The sufferers are: E. Metcalf, five houses, loses 900 lights 10x12, no insurance, he also lost about 100 fancy fish from his lily pond by overflow; Wm. Yeager fortunately was repainting his sash from four greenhouses and had them piled up, thereby only losing 12 lights 8x10; Jos. N. King, one house, loses 45 lights 8x10, no insurance; J. Cunningham was kindly passed by.

INDIANAPOLIS.—The Society of Indiana Florists met August 1 and appointed Anthony Wiegand, Will Bertermann and John Riemann a committee to inspect Floral Hall, the new building on the State fair ground, and report whether it is what the society was led to expect. The committee was instructed to secure the use of the hall exclusively for florists,

in order to give room for the great display intended. The recommendation of the Chicago florists as to the appointment of J. D. Reynolds as commissioner of horticulture in the World's Fair, was heartily indorsed. It was decided to ask the Council for a lower rate of rent for Tomlinson Hall during the coming chrysanthemum show in November. It will be urged that the show is not a money-making transaction, and usually winds up with a deficit. The experiment of selling season as well as single tickets will be tried this year, and in order to work up a public interest meetings will begin to be held in October, at which essays relating to flowers and music will be the order. Amateur flower growers will be particularly invited to take part. President Langstaff, J. J. B. Hatfield and Will Bertermann were appointed to perfect arrangements for these meetings.

H. H. BERGER & CO.,
P. O. Box 1501, SAN FRANCISCO, CAL.

Baltimore.

The Gardeners' Club of Baltimore and the Washington Florists' Club of Washington held a reunion August 6 at Bay Ridge, about 350 persons being present from Washington and a large number from Baltimore—relatives and friends of the two organizations. The Washington Club entertained the Baltimore Club at dinner, while at supper the Baltimoreans were the entertainers.

The Washington Club, which came by special train and arrived at Bay Ridge a short time ahead of the steamer Columbia, met the Baltimore Club at the wharf and extended to them a cordial greeting. Mr. Robert Bowdler, president of the Washington Club, made a short address of welcome, to which Mr. Wm. McRoberts, president of the Baltimore Gardeners' Club, responded. Mr. Charles F. Hale was chairman of the committee of arrangements for the Washington Club, and Mr. Charles G. Campbell for the Baltimore Club.

At an informal meeting held during the day Mr. Wm. Fraser extended an invitation to the Washington Club to designate members of the club to act as judges at the flower show which is to be held in Baltimore in November next, from the 11th to the 14th inclusive. The invitation was accepted. Mr. Seidewitz also broached the subject of extending an invitation to the Society of American Florists, which meets in Boston this month, to make either Baltimore or Washington the place of meeting next year, the two clubs to unite in entertaining the society which ever place may be designated. Mr. Wm. Cadmus, of the Washington Club, cordially endorsed the suggestion. No definite action was taken, but will be at called meetings of the two clubs previous to the 14th inst.

Among the amusements of the day at the Ridge the two clubs had a shooting match, the Baltimore club carrying off first honors in the shape of a box of cigars, while the Washington Club took the second prize, a red lantern, which, as the club's secretary remarked, would serve to light them on to victory at the next match.

Australian Acacias.

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG YIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but, by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 20,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as HEADQUARTERS FOR THE BERMUDA EASTER LILY; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP OF 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine *Liliium Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand; "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Toronto, Ontario.

The exhibits at the annual flower show of the Toronto Electoral District Society were excellent and there was a gratifyingly large attendance.

In plants first premiums were awarded to John Chambers for 6 achimenes, 6 fancy caladiums, 3 cannas, 6 cannas, 3 leycopodiums, 6 stove or greenhouse plants, 6 stove or greenhouse plants in flower, 3 stove or greenhouse plants, 12 sub-tropical bedding plants, best collection of tea or Bourbon roses; to Sir D. L. Macpherson for 3 anthuriums, 3 exotic ferns, specimen orchid in flower, 3 palms; to John Cottrell for 2 hanging baskets filled with flowering plants, 2 hanging baskets filled with foliage plants; to George Reeves for 12 tuberous begonias, 6 foliage begonias, 6 exotic ferns, 2 specimen tree ferns, 3 varieties ficomias, specimen palm, 6 palms; to the Horticultural Gardens for 6 flowering begonias, specimen zonal geraniums, 6 single zonal geraniums, table 4x10 feet most tastefully arranged with plants in pots; to Central Prison for 6 coleus, 3 new coleus, plant trained on trellis, 12 stove or greenhouse plants distinct varieties; to Robert Murray for specimen fuchsia, 3 single fuchsias, 6 single or double fuchsias, 6 silver and golden tri-color geraniums; to Mantion Bros. for specimen double zonal geranium, 6 double ditto, 3 pelchids in flower, collection of orchids; to Joseph Graham for 12 distinct varieties of coleus; to Noah Sunley for 3 new varieties of geraniums; to J. Finlay for 3 lilies, 6 distinct varieties of palms, 6 single petunias, 6 double petunias, 3 selaginellas; to A. Gilchrist for ornamental leaved cannas, insectivorous plants.

SOMETHING
NEW.

BEAUTIFUL
AND
CHEAP.

GREVILLEA ROBUSTA.

This is an Australian tree, commonly known in its own country as "Silk Oak." It has been grown for years in California as an ornamental shade tree, planted on the lawn or along the sidewalk. It forms a beautiful plant, and is sure to find its way into general cultivation as an ornamental pot plant for house decoration. The leaves are in all appearance like the compound fronds of a fern; they are alternate and not deciduous, which fact makes the plant doubly beautiful. The curved, drooping habit of the Frondose leaves is a very graceful feature of the plant; as the new leaves appear they are pink, changing gradually to yellow, light green and dark green; the effect is most beautiful in the young plants. The plant grows with a straight, upright stalk, and no branching until it has gained considerable height; but by "pinching" out the head it can be made to throw out later branches at any height desired. For pot culture, to which we will be confined on account of low winter temperature, a plant headed back at two or three feet would soon form a specimen foliage plant, that would command as much admiration as a stately palm, a spreading tree fern, and be as useful for parlor or stage decoration. It is also beautiful when small for ferneries. It will take the place of Cocos for centers, and for many other decorations it takes the place of Adiantum ferns. The plants we offer are from 2½ to 3 inch pots.

We Will Send

Spikes and Gum.

A florist whose place of business is near Eighth avenue, has this card in his show window: "Gardens laid out, kept in order and free of cats." He says he is very busy from April till December. "I charge," he remarked, "from \$10 to \$15 in fixing up a front yard or a back yard, and \$2 a month for keeping the yard blossoming with flowers. When I was in business down town I never received any orders to beautify grass plots. People up here, however, think it is country-like, you know. What plants do I use in fixing up a yard? Why, geraniums, pansies, verbenas and other plants that bloom during the season. How do I keep cats out of a back yard? Spikes and gum, by gosh."—*New York World.*

Using City Steam.

Will some one who has tried it give me their experience in using city steam for heating greenhouses? Is there any danger of being cut off by accident?

THE AMERICAN FLORIST

CONVENTION SUPPLEMENT.

Vol. VI.

CHICAGO AND NEW YORK, AUGUST 15, 1890.

Supplement to No. 121

Key to Map.

1. Convention Hall.
2. Tremont House.
3. Music Hall.
4. Adams House.
5. American House.
6. Boston Tavern.
7. Hotel Brunswick.
8. Crawford House.
9. Parker House.
10. Quincy House.
11. Revere House.
12. Sherman House.
13. United States Hotel.
14. Hotel Vendome.
15. Young's Hotel.
16. Bunker Hill Monument.
17. Faneuil Hall.
18. Old South Church.

Boston Notes.

The Germania band will furnish the music.

Frank Becker, J. W. Manning and W. C. Strong will supply the plants for the decoration of Horticultural Hall.

The bowling contest will take place on Tuesday afternoon. The alleys at the Allen gymnasium are very fine, and there will be abundance of room for spectators.

The horticultural exhibition at Music Hall will be free to members on showing their badges.

The silverware for the large number of special premiums will be quite a show in itself.

One of the most interesting events will be the trip on Wednesday afternoon to historic Lexington, and the beautiful grounds of Mrs. F. B. Hayes. There will be a warm welcome from Mr. Comley.

If Mr. J. W. Manning makes one of his characteristic exhibitions of hardy herbaceous flowers there is a great treat and a valuable lesson in store for those who will examine it.

A large group photograph of the members will be taken on the grounds of Mr. H. H. Hunnewell on Thursday at 4 p. m. The picture will be made by Mr. Chas. Storer, of Boston, and a copy of the same will be presented to each member by the Herendeen Mfg. Co., of Geneva, N. Y., who make the Furman steam and hot water boilers.

Two new gladioluses of the Nancienne section, President Carnot and John Laing, have been certificated by the Mass. Hort. Society recently.

The officers of the Association of Cemetery Superintendents and of the Mass. Hort. Society have been invited by the Gardeners' and Florists' Club to participate in the excursion on Friday.

Boston sweet pea growers have reason to be proud of their accomplishments this season. The flowers produced this year have been about as near perfection as possible and enormous quantities have been disposed of.

Mr. Hugh Dickson, of Belfast, Ireland, will be present at the convention. Representatives of other noted trans-Atlantic

MAP OF A PART OF BOSTON.

houses are also expected. Much regret is expressed at the unavoidable absence of Mr. Dimmock, of Summit, N. J., who has been unexpectedly called to London. The boys are brushing up their greenhouses and giving the stores a little touching up in order to make a good im-

pression. Mr. N. F. McCarthy has even gone so far as to give his big yellow cat a fashionable clip. Nick says he would have had the animal shaved with a razor if he could only have held him quiet. As it was the job cost \$1.50 and the man earned his money. W. J. S.

Programme for the Boston Convention.

TUESDAY, AUG. 19, 1890.

FIRST DAY—Opening Session, 10 o'clock A. M.
ADDRESS OF WELCOME, BY THE GOV. OF MASS., AND THE MAYOR OF BOSTON.—
RESPONSE, ROBT. CRAIG, PHILA.—PRESIDENT JORDAN'S ADDRESS—REPORTS OF SECRETARY AND TREASURER—REPORTS OF STANDING COMMITTEES—REPORTS OF SPECIAL COMMITTEES—MISCELLANEOUS BUSINESS—DISCUSSION OF PRESIDENT'S ADDRESS.

FIRST DAY—Evening Session, 7 o'clock.

ESSAY—The growing importance of Easter trade, and how to prepare for it. JAS. DEAN, Bay Ridge, N. Y.

Discussion.

ESSAY—The Value of System in Business. D. B. LONG, Buffalo, N. Y.

Discussion.

QUESTION BOX.

WEDNESDAY, AUG. 20, 1890.

SECOND DAY—Morning Session, 9:30 o'clock.
Selection of place of meeting for 1891.
Nomination of officers for ensuing year.
ESSAY—Hybridization. E. S. CARMAN, River Edge, N. J.

Discussion.

Election of State Vice-Presidents by State Delegations.

SECOND DAY—Evening Session, 7:30 o'clock.
ESSAY—Best Twenty-five Hardy Herbaceous Plants for Florists' Use. J. WOODWARD MANNING, Reading, Mass.

Discussion.

ESSAY—Succulents. E. S. MILLER, Floral Park, N. Y.

Discussion.

Discussion on Landscape Gardening.

This subject proved to be most interesting at the Buffalo meeting, and an opportunity will be given to all who wish to express their opinions on the subject at this time.

QUESTION BOX. (see below.)

The Florists' Hail Association will meet at Horticultural Hall one hour previous to the opening of the Evening Session, Second Day.

THURSDAY, AUG. 21, 1890.

THIRD DAY—Morning Session, 9:30 o'clock.
Election of officers.

ESSAY—The use of Special Fertilizers Under Glass. PROF. S. T. MAYNARD, of Mass. Agri College, Amherst, Mass.

Discussion.

Review of plants of recent introduction.

THIRD DAY—Evening Session, 7:30 o'clock.
Final committee reports.
Miscellaneous business.

QUESTION BOX. (see below.)

FRIDAY, AUG. 22, 1890.

FOURTH DAY.

The fourth day will be devoted to social enjoyment. The Gardeners' and Florists' Club of Boston will tender to the members of the Society of American Florists a trip in Boston harbor and along the Massachusetts coast, to be followed by a banquet at Nantasket Beach. Other hospitalities which have been prepared for the pleasure of the delegates, including a number of invitations to notable private establishments, will be announced at the proper time.

QUESTION BOX.

The following subjects for the Question Box have been already sent in, and together with those placed in the Question Box during the session, will be assigned to gentlemen competent to reply to them. Five minutes will be allowed for each

reply, and they will be replied to at the three evening sessions, and will be grouped as nearly as possible so that subjects of general interest to the trade will be assigned to the first evening; cultural questions to the second evening; and questions relating to mechanical appliances, etc., to the third evening.

SUBJECTS.

1. Berry-bearing Plants for Fall Use?
2. Twenty-five Plants Indispensable to the Extreme South?
3. Acclimation of Southern Plants in the North?
4. Twelve Best House Plants for Window Gardening?
5. How must Liliun Auratum be Handled to make it a Permanent Success in Open-air Culture?
6. Can the Hellebores be Grown to Advantage by the Commercial Florist?
7. Can we Reasonably Expect a Race of Early Chrysanthemums, blooming in September and October, Valuable for America?
8. Best Method of Treating Callas during Summer to have them in bloom for the holidays?
9. Best Method of Forcing Early Hybrids?
10. Twelve Best Hardy Shrubs for Florists' Use?

11. Twenty Best Native Plants suitable for Florists' Use?

12. The use of Foliage in Connection with Cut Flower Work?

13. How to Increase Public Interest in the Society and its Objects?

14. Is the Selling of Flowers, etc. through Commission Men the best possible Plan of Marketing our Produce? (To be answered by a grower, a commission dealer and a retailer respectively.)

15. What can be used to make a Vapor that will Destroy Red Spiders and not injure Vegetation in Greenhouses?

16. Petroleum: Is it Profitable in Greenhouse Heating?

17. What can be said in favor of Overhead Heating?

18. Is Double Thick Glass the best and in the long run the Cheapest?

DON'T FORGET to have your railroad certificate countersigned by Secretary Stewart.

TRADE LIST ON APPLICATION.

Convention Notes.

THE HEADQUARTERS of the AMERICAN FLORIST are room 200, Tremont House.

BE SURE to get a certificate from the agent when you buy your ticket to Boston.

THE ANNUAL exhibition of the Mass. Hort. Society will be held in Music Hall, see map.

EXCURSION and banquet at Nantasket Beach with the Boston boys on Friday, the 22nd.

THE COMMITTEE on Nomenclature meets at the Tremont House Monday morning August 18.

A MEETING of members and all others interested in the American National Chrysanthemum Society will be held some afternoon during the convention, notices of which will be posted in the convention hall.

AS WILL be noted a map is especially necessary to strangers visiting Boston. Don't venture out alone without the accompanying one in your pocket or you may not find your way back to headquarters before the limit on your railroad ticket has expired.

THE MAIN part of the trade exhibit is in the hall below that in which the convention will assemble. The builders and other heavy goods will be found at Hunsford Hall, which is one block from the convention hall and is on the ground floor of Music Hall.

IF you would have "good luck" with your forcing stock, try

GARDINER'S.

Send a list of your wants, stating kinds and quantities, for estimate.

GARDINER'S GENUINE ENGLISH MILLTRACK MUSHROOM SPAWN.

"Underneath our green-house benches is just the place for Mushrooms. They are not a bulky crop, and a good sale for them, at a good price, is assured for all we can raise, for the supply has never been nearly equal to the demand."

"The proper time to begin is in August, September or October, with successive beds in November and December; this will give us an unbroken supply from the end of October till the end of April."

—W. Falconer, in "American Florist."

MUSHROOM SPAWN, GENUINE ENGLISH MILLTRACK.

John Gardiner & Co. make a specialty of genuine English Milltrack Spawn. Why waste your money on doubtful quality, when you can buy the Genuine English Milltrack at a reasonable price? Our spawn is prepared for us by one of the most celebrated makers in Worcestershire, England, and can be thoroughly relied on to produce a fine crop of the best Mushrooms. Four importations a season. Always fresh. The price commends itself. 50 lbs., \$5.00; 25 lbs., \$2.75; 10 lbs., \$1.20; by express at customer's expense. Sample by mail, post paid, 5 lbs. for \$1.00.

HINTS ON MUSHROOM GROWING.

Our eight page pamphlet, "Mushrooms for the Million," which gives in a concise form, all necessary information for the successful raising of the best Mushrooms, will be enclosed with sample orders, or mailed free for stamp to any one interested.

- 9 Alsophila australis, 2 to 10 "
- 7 Ficus elastica, - - 10 to 15 "

AND OTHERS.

For prices and information regarding the plants, apply to

WM. J. STEWART,
67 Bromfield St., BOSTON, MASS.

ZIRNGIEBEL NEW GIANT PANSIES.

HUGE JEWELS OF VELVET AND GOLD.—Boston
Traveller, May 10, 1896.

Have opened a new era in Pansies. The magnificent specimens that we have exhibited and sent to Boston, New York, Philadelphia, Detroit, Hartford, etc., have shown to what perfection of color and size the Pansy of to-day can attain when well grown. The display we made on May 10th in Boston has probably never been equaled even in Europe, not a few of the flowers measuring four inches across, and colors rivaling the best orchids.

OUR GIANT MARKET
is truly the variety for the million, being of immense size and bright colors. We have greatly improved, getting more variety of colors, especially in the lighter shades. 1,500 seeds.

THE GIANT FANCY
we find it impossible to improve on. They are certainly the ne plus ultra in Pansies now. They require high cultivation to develop well. 600 seeds.
Trade packages of either variety at \$1.00 each.
Full directions how to grow pansies with each pkg.

**Immortelle Letter and
Pin Fastener.**

CEFREY LETTER CO.,
GENTLEMEN:—I find the new machine-made
Immortelle Letters manufactured by you very
saleable and in many respects superior to any-
thing of the kind we have ever handled. Their
uniformity of shape, size and color, the convenient
form in which they are put up, and the excellent
device for fastening them to the work, are among
the most commendable points in your letters.
Please double my last order and deliver as soon as
possible. Yours truly, W. J. STEWART.

CEFREY LETTER CO., 13 Green St., Boston.
DEAR SIR:—Please ship me five thousand letters
as soon as possible. They are the best and most
practical letters in the market. The pin fasteners
are a long way ahead of the old fashioned way of
wiring. Yours truly, N. F. MCCARTHY.

CEFREY LETTER CO., Boston, Mass.
DEAR SIR:—Send at once ten thousand small let-
ters and five hundred large (two inch.)
GALVIN BROS., Boston.

We wish to announce to all florists that we have removed to much larger quarters, **No. 13 GREEN STREET, BOSTON.**

We make our letters by machinery; they are not only more perfect in size, shape and color, but are the best and cheapest in the market. Our 2-inch letters are only two and a half cents, and the 1½-inch letters are only two cents apiece. Your customers will have no o hers. Be up with the times! Send us your orders and we will ship you a supply for this winter. **They are the best in the market.**

Press of convention matter has necessitated the addition of four extra pages this issue, making it a 28-page number.

The Florists' Hall Association has recently paid J. J. Schumacher, of Sioux Falls, South Dakota, \$150, and S. D. Bradford, of Colorado Springs, \$33.45, for loss by hail.

As will be noted, our report of the Boston convention which appears in this issue consists mainly of a record of happenings of interest during the week. But we shall treat fully of the many essays and discussions in future issues.

We FEEL some little pride in being able to present such excellent engravings of the convention in session and views at the Mass. Hort. Society exhibition so soon after these events. The center of our full page illustration gives a general view of the exhibition. The mantel in the lower left hand corner is the one arranged by David Allan and which was awarded first prize; the one in the upper right hand corner was arranged by W. E. Doyle and received second prize. The other views show selected groups of decorative plants.

The Boston Convention.

The sixth annual convention of the Society of American Florists convened in Horticultural Hall at 10:40 Tuesday morning, August 19, with about 600 members present.

The session was opened by addresses of welcome from Lieutenant-Governor Haile for the State, and Mayor Hart for the city. The hall was crowded to overflowing, and the bright decorations of the Grand Army encampment, with the strains of the Germania Band, presented, indeed, a scene of welcome. On the platform with the Lieutenant-Governor and the Mayor were J. M. Jordan, President of the Society; A. P. Calder, President of the Gardeners' and Florists' Club of Boston; M. H. Norton, Vice-President, and several of the State Vice-Presidents and prominent members. Mr. A. P. Calder took the chair and introduced Lieutenant-Governor Haile, who, in a brief speech, welcomed the visitors. He said:

Members of the Society of American Florists. Ladies and Gentlemen:—It is my pleasant duty to extend to you an official welcome on this the first session of your convention. Your calling is one destined to accomplish a high achievement in civilization. As the pictures which adorn the walls of our houses act as educators in rearing to a marked degree, so the flowers in beautifying our homes and their surroundings are powerful forces in the evolution of a higher civilization. Your society is doing a noble work, the trend of which is the uplifting of humanity. How different are the purposes of this society, to which the State and city extend a welcome this morning to those of the great assembly of last week. Last week the quarter century milestone of the war was set up, and Massachusetts came forward to honor the soldier who fought for the Union. Today we welcome the florist who beautifies the land when the white-robed messenger of peace has full sway. I thank you for the compliment of inviting me here, and Massachusetts extends the most cordial welcome to every individual member of the society, and expresses her interest in the objects of the society.

After a selection by the Germania orchestra Mr. Calder introduced Mayor Hart, who also extended a cordial welcome on behalf of the city, to which Mr. Robert Craig responded as follows:

Mr. President—Ladies and Gentlemen: The members of the Society of American Florists have already been made to feel what it is to be the recipients of a New England welcome; they have thus early had occasion to realize that, with you, that term is not meaningless, but one full of significance. Our whole country has been thrilled by the demonstration of the extraordinary capabilities of Boston hospitality, as evidenced only last week, in the kind and generous treatment of the

multitudes of the veterans of the Grand Army of the Republic, every one of whom left your beautiful city with feelings of gratitude toward it which will endure as long as life shall last.

I want to assure the distinguished representatives of this State and city and the people of Boston, through them, that the members of this society appreciate in a like degree the evidences of kindly feeling with which they have been received on every hand; and I can only regret my inability to clothe in language sufficiently adequate for the occasion my response to the cordial greetings that have been so eloquently voiced by the Chief Executive of this commonwealth and by the Mayor of this city.

We are proud to be in Boston for many reasons—because it is an historic city, one full of places of peculiar interest to us and surrounded by memories that are cherished by all of us—because of its achievements, because of its institutions of learning, because of its magnificent libraries, because of the noted men and women it has produced. Some of the greatest poets, philosophers and statesmen that this country has known lived and labored in Boston or in its vicinity. We are proud of being here for another reason: because Boston is the centre—the acknowledged centre—of horticulture in this country. It is the home of the greatest, the most successful and one of the oldest horticultural societies in the land; a society that, ever since its organization, has numbered among its members some of the best citizens of Boston. In fact, horticulture has been recognized in Boston as it has not been in any other city in the Union. From early in the history of Boston the Commons of the city were set apart to be adorned by the florists' art, for the use of the people for all time to come; and from that day to our own horticulture has been given here that recognition to which its merits entitle it.

We anticipate the enjoyment we shall have in viewing the magnificent exhibition in Music Hall, which has been gotten up by the expenditure of so much well-directed labor—the sight of the exhibition alone is worth coming a thousand miles to see—and when we think of the marvelous collections of rare and valuable orchids and other plants we shall have opportunity to see, and when we remember that in the vicinity of Boston are undoubtedly the finest examples of landscape art in America, and probably not excelled by any in the world, we cannot sufficiently express our pleasurable anticipations.

Ladies and gentlemen, I will not detain you longer, but will conclude by repeating, again and again from the bottom of my heart our thanks for the greetings extended to us.

Both the welcome and response were received with long-continued applause.

Then followed President Jordan's address, from which we give extracts below.

President Jordan's Address.

Precedent has established the rule in this association that its president should deliver an annual address, on such subjects as he may deem of interest and the good of the society may demand.

The object of this society is defined in Article II. of the Constitution to be as follows: "The aim of this society is to lift up and carry forward all that tends to advance the interest of its members;" therefore we are at liberty to present any subject connected with art, literature or science, entering into an analysis of any of the economic questions of the day.

Much is expected of this society in its organized efforts, not only to instruct its members in their daily avocations, but to educate the masses in horticulture, by widening and deepening an interest in our profession, by increasing our membership, active and honorary, until we embrace all the leading men of the country who are interested in the various callings of horticulture; all men engaged in scientific research tending to advance the profession; the formation of kindred associations; encouraging exhibitions of plants and flowers, by bringing into closer relations the retail dealer with the grower and wholesale dealer; unless the retailer dealer can make a success of his business the grower can not hope to do so.

An eminent writer on economics realized this statement: "The profits realized in nearly all branches of business to-day are acquired from what was considered twenty years ago *waste*," and but a small percentage of waste has yet been saved, therefore it becomes us closely to examine our work and see wherein we can prevent or diminish this waste; waste of time, waste of money, waste of energy, waste of hours that should be spent in relaxation, amusements and recreation.

A large proportion of the wealthy men of this country are anxious to know how they can best benefit humanity with their accumulated millions; how they can best build a monument to their names more enduring than granite; how they can best prevent waste and reduce the friction in business, by lubricating the wheels of evolution that the fittest may survive.

Large fortunes have been bequeathed to religious institutions, but who can foretell the teachings of any one religious sect one hundred years hence? Libraries have been established in various cities, and schools have been endowed to carry out some wishes of their donors, and while we all believe that much good is accomplished in evolving a higher civilization for those who can avail themselves of the benefit of these institutions, yet we must acknowledge that those who are thus benefited are very few, compared with the great mass of people that frequent our parks and public grounds to take object lessons; where young and old, rich and poor, learned and illiterate meet on one common level to drink in nature's best gifts to man.

Indoubtedly these sentiments inspired Mr. Henry Shaw (who died in St. Louis, August 25, 1889) to bequeath to the public his immense fortune for all time to come, for the purpose of instructing the people in the ever-increasing knowledge of horticulture. Let me read you a few extracts of his will: After mentioning the trustees, he gives to the public a Botanical Garden, which shall be forever kept up and maintained for the cultivation

and propagation of plants, flowers, fruits, trees and other productions of the vegetable kingdom, a museum and library devoted to the service of botany, horticulture and allied subjects.

A school has already been established, under the direction of Professor William Telcense (who is connected with the Washington University), where young men are trained in the practical work of horticulture. They are paid for their work, besides furnished with lodgings and tuition free; they will be taught surveying, book-keeping and all necessary branches of knowledge to make them useful in any branch of horticulture.

Mr. Shaw did not forget the social side of life, and bequeathed one thousand dollars each year for a banquet to men eminent as teachers of science, literature and art; also four hundred dollars each year for a like banquet for gardeners and florists; five hundred dollars each year for a floral exhibition; giving the trustees unlimited power to spend large sums of money in extending the parks and pleasure grounds.

The subject of a higher education has been mentioned in our former conventions, and has elicited some sharp criticisms, and in presenting it again, will quote from Professor W. O. Atwood's report from the Agricultural Department at Washington, D. C., transmitted June 15, 1889:

"Within recent times, farmers and men of science interested in farming, have seen the advantages of using the resources of science to improve the practice of agriculture, and have established agricultural experiment stations.

"The objects of these stations are to experiment and to teach, to make a regular business of discovery, to promote agriculture, by scientific investigation and experiment, to diffuse as well as increase the knowledge which improves farm practice and elevates farm life. Modern science reveals the operations of nature in their truth and beauty, and lifts us by their contemplations out of ourselves to higher things. It finds as much that is wonderful in the growth of a blade of grass as in the motion of the planets, as much of inspiration in the process by which a clod of earth gives up its fertility as in the forces that keep the stars in their places in the universe."

The United States Department of Agriculture, situated in Washington, D. C., is supplied with reports from the different experiment stations (of which there are some forty odd at present); these reports are condensed, and a bulletin issued free to any applicant; any one engaged in horticultural pursuits can gain much useful knowledge by the reading of these bulletins. Each member of this society should make the acquaintance of the director of the nearest experiment station, furnish him with new plants or trees for testing, giving the director a report of such facts as you may have learned by your own experiments, and thus by this interchange of knowledge will we advance to that higher plane where we can reason from cause to effect.

There should be established some measure of qualification of young men entering into the employment of florists to learn the business, and with proper influence we could have graduated at many of our institutions of learning young men suitable for apprentices in our profession.

The death list of our members for the past year is unusually long. Some whose names have been shining lights for many

years have left us. In due time resolutions from the committees will be received and recorded. May the lessons of the past inspire us to fill up the full measure of our manhood, by endeavoring to do more for others than we expect individually to receive.

Recommendations for our future work will be made by the executive committee.

During the sessions of this convention may our deliberations be honest, earnest and decisive; each expressing his own individual opinions, either in speaking or voting on any subject that may be presented.

Hoping for a continuance of the prosperity of this society in the advancing of our standard of excellence, so that we may ever remain in the foremost rank in the pursuit of horticulture, the foregoing is respectfully submitted for your consideration.

Secretary Stewart reported that 775 members had paid their dues for 1889, and that during the year fourteen members had been reported by death.

Treasurer, H. H. Remond, reports during 1889 of \$1,957.97, and disbursements for the same term of \$1,231.90, leaving a balance of \$726.07 in the treasury on January 1, last. On July 1st, last, there was a balance of \$554.

The Committee on Nomenclature submitted the following report through Chairman J. D. Reynolds:

Mr. President: Your committee have made every effort in their power to collect all available data for the revision of plant nomenclature. Not content with such cases of misnaming as had come under their own personal notice twelve hundred circular letters of inquiry were sent out with addressed postal cards for reply. Only three of these came back from the dead letter office, having failed to reach their destination. One hundred and twenty-eight answers were received. Sixty-three of these were to the effect that the writers knew of no cases of misnaming, and sixty-five gave lists of from one to a dozen or more supposed synonyms.

To the remaining 1069 circulars no reply whatever has been received.

Your committee met at the Tremont House, in this city, August 18, and devoted a long morning session to carefully examining and sifting the sixty-five lists sent in. The larger lists were mainly of cases where there has been confusion and conflict of authority as to the right botanical name. Of course these were generic or specific names, and, while it is in the highest degree desirable that the conflict should be settled and a correct scientific botanical nomenclature be arrived at, yet your committee feel that they have neither the authority nor adequate facilities, and they take it that such work is not at present expected of them, hence the only work undertaken at this meeting has been an attempt at lessening the existing confusion in varietal names and especially the examination of cases when it is alleged that new names have been sent out under new names with fraudulent intent to sell them at an enhanced price.

It must be said here that such cases are far less numerous than has been commonly asserted, and of the few instances that have been brought to the notice of the committee not a single one has been accompanied by any sort of legal evidence that the accusations were true. In most cases names were withheld, and where names were given these were simply the unsupported assertion of the writer, sometimes even accompanied with the

THE SOCIETY OF AMERICAN FLORISTS IN CONVENTION AT BOSTON.

request that the communication be considered confidential! While your committee have every desire to expose and punish fraud, and will fearlessly make the attempt if furnished with proper evidence, yet it can hardly be expected of them that they will undertake the work of "showing up the villains" by making public charges which they would be unable successfully to maintain in defending a suit for libel.

Of the cases of supposed misnaming submitted by far the larger number—fully seventy-five per cent.—are simply cases of mistaken identity, arising from substitution, either intentional or accidental, by the person the plants were bought of; or else the mixing of labels, which is well known to be a most fruitful source of error.

Your committee makes no claim to being infallible, and, in all probability, when their list of supposed synonyms comes to be printed and circulated, it will be found that their judgment in some cases has been erroneous and that further revision is necessary. This is not a work that can be done at once or which can ever be declared perfect, but it is hoped and believed that perfection can be nearer approached year by year, and that what has been so far accomplished will not be considered without value.

There are, of course, a number of instances where the committee are in doubt as to whether two names are or are not synonyms. These cases can only be proved

by testing, growing the plants side by side under the same conditions for a sufficient time to make exhaustive comparison. The chairman of your committee entered into correspondence with the horticultural directors of the agricultural experiment stations, and a number of them have signified a willingness to undertake such work for us and make official report of the results. It is, however, the nearly unanimous opinion of the committee that this proffered assistance should not be accepted, since it is doubtful if the results would be accepted as final and conclusive, and it would be better that the work of testing should wait till it can be done by practical men within the society.

The six sub-committees have made painstaking reports, giving all known cases of misnaming in their different classes, which reports are herewith submitted.

Toronto, Ontario, was selected as the place of meeting for 1891 and officers for the ensuing year elected as follows: President, M. H. Norton, Boston; Vice-President, John Chambers, Toronto; Secretary, Wm. J. Stewart, Boston; Treasurer, M. A. Hunt, Terre Haute, Ind.

The many essays and discussions on same will be treated in subsequent issues.

The Florists' Hail Association.

The Florists' Hail Association met in

Horticultural Hall at 6:30 p. m. August 20. The report of the secretary shows the amount of glass insured to be 2,132,118 feet. The reserve fund amounts to \$1,233, and the balance on hand of assessment fund \$553. The following directors were elected for the ensuing year: B. F. Dorrance, Julius Roehrs, Edwin Lonsdale, J. D. Cismody, James Horan, J. M. Jordan and J. C. Vaughan. At the meeting of directors held subsequently the following officers were re-elected: J. M. Jordan, president, J. G. Esler, secretary, J. C. Vaughan, treasurer. Although the fund for payment of losses was still above the legal limit it was deemed wise in view of the large amount of glass now insured, to make an assessment on all members who joined prior to April 1 last. This will give a strong cash fund to meet any losses. Many new applications were reported. Full reports will be printed in a later issue.

The Entertainments

A CARRIAGE RIDE.

On Tuesday afternoon the ladies in attendance at the convention were treated to a carriage ride through the city and suburbs by the Gardeners' and Florists' Club of Boston which was very greatly enjoyed. The party filled a tally-ho and thirty-four carriages. Their route took them through Commonwealth avenue

and the Back Bay Park and out to Franklin Park, where refreshments were served at the Overlook. Thence the drive was to Cambridge, where the pottery of A. H. Hews & Co. was visited. Here the party was welcomed by Mr. Hews and shown over his establishment, a light lunch being provided also and a souvenir napkin-holder vase was presented to each individual.

AT LEXINGTON.

Wednesday afternoon a special train carried the S. A. F. to historic Lexington in response to an invitation from Mrs. F. B. Hayes to visit her beautiful estate. Arriving at Lexington they repaired to the town hall and listened to an address of welcome by Rev. A. B. Staples. Mr. Staples also enumerated and explained the interesting historical events for which the town is noted, in a pleasing manner. The company then proceeded to the house and viewed the historic boulder and the famous John Hancock house. Arriving at the home of Mrs. Hayes, after a ramble over the beautiful grounds and an opportunity had been given to thoroughly admire the magnificent trees and other objects of interest, a collation was served under a large tent in the yard. Alderman Wilson welcomed the visitors in behalf of Mrs. Hayes in a few well chosen words. After the collation had been served the visitors assembled on the slope in front of the house and were photographed. About 6 o'clock the company took the train for Boston, pronouncing the occasion a very pleasant one.

AT WELLESLEY.

Thursday afternoon the members of the society were taken by special train to Wellesley, where they were met by Mr. H. H. Hunnewell at his magnificent estate, certainly the most beautiful and interesting in America. Several hours were spent in admiring the beautiful landscape, the elaborate bedding, the rare plants and flowers to be seen in wonderful profusion, the grapevines and fruit forcing houses, the curious garden of clipped trees, the conservatories, the views over Waban Lake and the many other gems of natural scenery. It was an educational afternoon. In response to a bugle call the visitors ascended on the lawn in front of the residence where they were photographed in a group, and afterward an elegant lunch was served in a tent which had been erected on the grounds for the purpose. Mr. Hunnewell is a royal host and he had an able lieutenant in Mr. Harris his head gardener. We shall have more to say about this beautiful place in an early issue.

BOWLERS' BANQUET.

Last Thursday evening the New York bowling team gave a supper at the Thorndyke to properly celebrate their success in carrying off first prize in the bowling match. It was an informal affair and those present enjoyed themselves most thoroughly. All the clubs which participated in the match were toasted individually and the Florists' Clubs of America collectively. The huge silver cup won by the New Yorkers was filled with champagne and each one present drank from it to the continued prosperity of the Boston Club, and at the same time made a speech, sang a song or told a story. The modest Bostonians were fairly overcome by the numerous eulogistic speeches and kindly wishes for their future welfare. Mr. Craig recited a "poem" which proved that success in any contest awaits those who aim high and put forth their best endeavor. A New York gentleman favored the com-

pany with a song entitled "Riding on the elevated railroad," which was an alarming expose of "high life" in the metropolis, and which evoked much laughter and applause. Mr. Lonsdale gave a revised version of the "Good old Duke of York," and Mr. Farson related in tuneful verse the exploits of the "Bold McIntyres." All those who could not sing said something wise or witty. Friday morning had got a fair start before the company separated.

EXCURSION AND BANQUET.

Friday was devoted entirely to pleasure. As guests of the Gardeners and Florists' Club the society enjoyed a delightful sail in Boston harbor on the steamer New York, followed by a banquet at Nantasket Beach. The time set for the start was 9 o'clock, but large bodies move slowly, and it was nearer the hour of 10 before the jolly crowd, numbering nearly 1,000, had snugly ensconced themselves aboard the boat.

The sail afforded many especially those who came from the west, their first sight of old Neptune's domain, and not a few of them paid him tribute. Heading for Nahant and then shaping her course for Minot's ledge light, the vessel gave ample opportunity to note the many points of interest in the harbor. At 2:30 p. m. the wharf at Pemberton was reached, where a special train was in readiness to convey the party to Nantasket.

On their arrival at the beach Landlord Verrelli of the Hotel Nantasket, catered to the wants of the inner man in the large skating rink. Here for over an hour the voyagers rested, being regaled with the delicacies of the season, enlivened by strains of sweet music from Landall's band, which had accompanied the party on the steamer, and wrought up to a pitch of enthusiasm at the close of the dinner by the speech-making which took place.

The post-prandials were begun with brief remarks from retiring President Jordan, who proposed three cheers for the entertainers, the Boston gardeners and florists.

They were given with energy. Then President A. P. Calder, of the Gardeners' and Florists' Club of Boston, acting as master of ceremonies, said that although the Society of American Florists had been cordially received by state and city officials, the Gardeners' and Florists' Club had proposed to outdo city and state by making them thrice welcome.

"When we heard at the convention in Buffalo," said Mr. Calder, "that Boston was to have the next convention, the wellspring of our desire overflowed, and our thought was, 'How can we best contribute to the happiness and enjoyment of the members and advance the interests of the society?' We have done what we could, and now we have but one more wish to express, which is that your visit here may long be remembered and remain fragrant, fresh and bright among your best recollections in the annals of the association."

Mr. Calder then called on President Jordan, who expressed his pleasure at the success of the convention, complimented the Boston reception committee on their untiring devotion to their guests, and said the past week, and especially this day, had been one of the happiest occasions of his life.

President-elect M. H. Norton was the next speaker. He joined with the president of the Boston club he said in giving the visitors a welcome. He believed no city could entertain them more fittingly,

and that no body of men could appreciate such cordiality more thoroughly than the florists. "If you are satisfied," he concluded, "I am sure we are all satisfied too!"

Edwin Lonsdale was next introduced, and presented to Secretary Stewart a purse of gold containing \$400, in token of the esteem in which he is held by his fellow-members. Mr. Stewart was overcome. In response he said: "I do not understand this matter at all, but if there is one thing more than another that could make me happy it is to see you all here with me. My heart is eloquent, but I can not express what it contains. Whatever I can do to show the florists of our country our feeling of love towards them I want to do. Yours is one of the noblest of callings, and you are never satisfied unless you are making somebody happy. God bless you all."

Mr. Calder then announced that the ladies attending the convention had held a meeting on board the boat, and had passed a vote of thanks to Mrs. F. B. Hayes, of Lexington, Mr. Hunnewell, of Wellesley, Mr. and Mrs. Hews, of Cambridge, Mr. J. Tailby, of Wellesley, and the ladies of the Boston convention, for their uniform courtesies during the convention. Mr. John Thorpe, of Pearl River, N. Y., was then introduced as the "father of the society." He spoke of the former conventions of the society, and said that the one in Boston "beat them all." He expressed his heartfelt thanks to the Boston Florists' Club. Mr. Patrick Norton, of Dorchester, Mass., was the next speaker. He said: "Last week the Grand Army were here in their warlike splendor, but this week records a peaceful and a like auspicious gathering. We hope to meet next year in Toronto, Ont., in the same strength, but also in a peaceful way." Mr. F. G. Foster, of Toronto, Ont., then said: "Although we can not compete with Boston in such generous and princely hospitality as we have enjoyed, Toronto will give you a hearty welcome and will give you a chance to enjoy yourselves in your own way. The visit will do us good and will do the Society of American Florists good in general. It will enlighten their minds to the capabilities of Canada and will smooth the rough ground supposed to exist on that imaginary line between Canada and the United States. It will increase the membership of the society, as the people of Canada will not only see the good fellowship existing among the members of the society, but will be quick to recognize the financial benefits resulting from membership in such an organization." Mr. W. R. Smith, of the Botanical Gardens of Washington, D. C., then spoke. He referred to the generous hospitality of Boston, and said that such a collection of plants as had been exhibited in their honor could not be equaled in any city in the world. Mr. J. D. Reynolds, of Chicago, referred to the coming World's Fair in that city, and urged co-operation on the part of the members to the end that the horticultural exhibition might be one in which all Americans could take just pride.

After the exercises in the rink a ball game won by a Boston picked nine in a contest with all comers by the score of 8 to 4 was played.

Those who did not care to witness the ball game strolled about the beach and whiled away the hours pleasantly until 7 p. m., when the return trip was made, the party reaching Lewis wharf shortly before 9 o'clock, thus bringing to a close a most enjoyable day.

Notes.

VOTES OF THANKS were tendered to the Gardeners and Florists' Club of Boston, Mr. H. H. Hunnewell, Mrs. F. B. Hayes, the Mass. Hort. Society, the press of Boston, and all others who had so generously assisted in entertaining the society and contributed toward the success of the convention.

THE DELEGATION from Chicago and the northwest came very near being pitched into eternity on the trip down through a broken axle on a forward car while running at a high rate of speed. Fortunately the accident resulted in merely a few hours delay in reaching the Hub.

MESSRS. John Thorpe and E. G. Hill were appointed delegates to represent the S. A. F. at the meeting of horticultural societies in Chicago, called to consider matters in connection with the World's Columbian Exposition in 1893.

BY A RESOLUTION offered by Mr. John Thorpe, Mr. Jas. D. Reynolds was in-dorsed by the society for the position of director of the horticultural department of the World's Columbian Exposition to be held in Chicago in 1893.

WHEN President-elect Norton and Secretary-re-elect Stewart appeared on the stage together they were greeted with tumultuous applause. Neither of them are great talkers, but both are good workers.

THE PLEASURES of the occasion were somewhat marred for President Jordan by the receipt of a telegram stating that a portion of his greenhouses had been destroyed by fire during his absence from home.

THE SHORT VIEW of the Nantasket Beach attracted the attention of the members from the interior who were so anxious for closer inspection that they could not wait for the speeches.

EULOGIES were pronounced upon the lives of John and Peter Henderson, Henry Bennett and other members who had been removed by death since the last meeting of the society.

MR. JAMES HENRY LAING, of John Laing & Sons, Forest Hill, England, attended the Boston meeting. Mr. Hugh Dickson, of Alex. Dickson & Son, Belfast, was also present.

PITCHER & MANDA's show of cypripediums at the trade exhibition was remarkably fine. Mr. Manda was present and assisted materially in all the festivities.

THE special prizes, consisting of silver vases, cups and other similar articles, occupied a glass case in the center of Music Hall and made a glittering show.

AN AMENDMENT to the by-laws increasing the secretary's salary from \$500 to \$750 per annum was adopted by a unanimous vote.

THE HOSPITALITY of the Boston friends was simply magnificent, and the management of the various excursions was most excellent.

MR. D. B. LONG's essay on system in business was liberally illustrated by large sheets showing his method of book-keeping.

MR. J. W. MANNING, of Reading, Mass., made a beautiful display of rare conifers in the halls of the Tremont House.

MR. JAS. DEAN, of Bay Ridge, N. Y., was nominated for the presidency, but declined in favor of Mr. Norton.

MR. E. S. CARMAN's essay on cross-fertilization and hybridization will be given in full in an early issue.

THE DINING-ROOM at the Tremont House was handsomely decorated with palms and similar decorative plants.

MR. W. K. HARRIS expressed the belief that double thick glass is the best and in the end the cheapest.

THE NEW YORK and New Jersey florists banqueted those who traveled with them to Boston by boat.

THE invitation to meet next year in Toronto was extended by Mr. J. H. Dunlop of that city.

THE DISCUSSION upon marketing cut flowers brought forth nothing especially new.

THE "only" Dan Farson, of the Quaker City, was there. "Nuff sed."

A PORTRAIT of President M. H. Norton will appear in next issue.

"JIM THE PEMMAN'S" score was the glorious sum of 234.

THE WEATHER was perfect during the entire week.

WE SHALL visit our Canadian friends next year.

Annual Exhibition Mass. Hort. Society.

The Boston Music Hall is but a few steps from Horticultural Hall, and in it the Mass. Hort. Society held its annual fall exhibition of plants and flowers. In Boston we expect to see something unusually superior in the way of fine plants, because of the many large greenhouse gardens in and immediately around it, and the general interest taken in fine gardening. But the present exhibition has been conceded by both the Boston people and strangers to have eclipsed in excellence any previous effort. Every plant shown was a good plant, and there was a complete absence of ill-grown or trashy stock. The palms were splendid, and so, too, were the cycads. The orchids, considering the time of year, were a bank of loveliness, and well merited the admiration of the many visitors who continually crowded in front of them. The crotons were especially fine, not so much on account of their large size as of their fullness, abundant, large and splendidly colored foliage. The dracaenas were not large; their merit rather consisted in their broad, massive leaves from the base up.

Large as the music hall is, there was not nearly room enough in it to display the plants to good advantage, but this disadvantage was more than counterbalanced by its nearness to the hall in which the convention was held.

Besides the prize-winning plants there were many other superb specimens. Frank Becker, of Cambridge, and W. E. Doyle, of Boston, contributed a large assortment of fine palms, dracaenas, laurels and other plants used in furnishing. The Harvard Botanic Garden sent a group of large ferns, mosses and cactuses, and Mrs. F. B. Hayes, of Lexington, a fine specimen of *Dasylirion acrostichum*. A large plant of the perforated leaved *Monstera* (*Philodendron*) *deliciosa*, with large, boat-like flowers and long, cone-like young fruits from J. H. White, elicited much interest.

Mr. Denys Zirngiebel, of Needham, contributed the very large group of China asters in bloom in pots that decorated the upper stage, and they were very fine.

One end of the hall was partitioned off into four compartments in each of which one table and one mantel decoration was arranged, and these rooms were by far the most frequented and apparently appreciated part of the whole exhibition. These rooms were always crowded with visitors. Sixty and forty dollars were

the first and second premiums offered for table decorations, and these had to be kept fresh and in good condition for four days. Galvin Bros., J. Newman & Sons, Twombly & Son and W. E. Doyle, all of Tremont street, had each a table. Galvin Brothers' table had a center-piece of pink roses—Mermets and Duchess of Albany, relieved at each end by dishes of Grace Wilder carnations all openly and tastefully arranged, and made up around with maidenhair fern. There were scrolls of Blanche Ferry sweet peas, and the favors were pink roses. *Asparagus plumosus* was draped about the lamps. Awarded second prize.

Newman & Sons' table had as a center-piece a vase built of double sunflowers with a bunch of Papa Gontier roses at top, and the base was trimmed with adiantum ferns. In the end baskets a dish of fruit was set in the middle, and built about with pink roses and ferns, and the center of the table for four feet wide and a good part of its length was lined with mirror glass on which were strewn pink pond lilies and their leaves and some fern fronds. The favors were of Papa Gontier roses.

Twombly & Son's table had a large Adiantum Farleyense as a center-piece set on mirror glass with pink pond lilies strewn on it, and a tracery of pink roses foliage and fern fronds was run all around the middle of the table. The favors were of Perle roses.

In W. E. Doyle's table the center-piece was a large flowing but airy specimen of *Phoenix rupicola* with small plants of *Cocos Weddelliana* and *Pandanus Veitchii*. This table was uncommonly wide and gave an opportunity for a larger use of plants and flowers than was the case with the others. Around the center plants and in an oblong square along the table was arranged a solid belt of speciosum lilies. And the favors too were of these lilies. Awarded first prize.

Two prizes, of \$75 and \$50 respectively, were offered by the Society of American Florists for a mantel decoration, and these elicited four competitors, namely, Galvin Brothers, J. Gormley & Son, Tremont street, David Allan, Mount Auburn, and W. E. Doyle.

Galvin Brothers filled the base with Veitch's pandanus, ferns and asparagus, in the fireplace was a *Cissus discolor*, double sunflowers and pandanus furnished the mantel shelf, with a *Croton Chelsoni* in the center, and over the mirror palms, dracaenas and pandanus were arranged.

John Gormley & Son occupied the same room in which was J. Newman & Son's table decoration. The base of their mantel decoration was filled with green dracaenas, screw pines and ferns; the mantel shelf was banked with Perle and Mermets roses, interspersed with ferns and a few croton leaves and draped with ferns and asparagus; two sunflower-made vases at the ends were filled with red and pink roses and a spray of *lapageria*, and there was a flower-made time piece in the middle. At the top was a center plant of variegated cypripedium with an adiantum on each side. Caladiums on pedestals occupied each end and the gas lamps were draped with smilax.

David Allan's mantel decoration was in the same room with Twombly & Son's table decoration, and it was a marvel of loveliness, richness and elegance. The materials used in its construction were of the finest kind, and they were arranged with such delicate effect that not a pot or vestige of one was seen, and everything appeared rich and nothing heavy. Up

each side of the mantel crotons, *Cocos Weddelliana* and variegated alocasias were arranged, and in the fireplace umbels of the white agapanthus were stuck among *Adiantum trapeziforme*; the mantel shelf was banked with *Fareyense* ferns trimmed with orchid blossoms and draped with long sprays of red *Lapagerias*; depending over the mirror sprays of white *Lapagerias* hung from a border of ferns and orchids. The decoration was surmounted by a Croton *Queen Victoria*, relieved on either side by a plant of *Pandanus Veitchii*. Splendid pitchers of *Masterei* and other *nerpentes* trimmed the lamps, and yards of plumose *asparagus* was freely used. The orchids used were *Odontoglossum vexillarium*, *O. Alexandre*, *O. Sanderiana*, *Grammatophyllum Ellisii*, *Cypripedium Curtisii*, *C. Lawrenceanum*, *C. Harrisianum*, *C. Stonei* and *C. Crossianum*. This mantel was awarded first prize.

In front of and in the fireplace in W. E. Doyle's mantel were arranged *dieffenbachias*, violet-leaved alocasias, green and variegated small *pandanus*, *Cocos Weddelliana*, a *Cordyline indivisa* and *Calladium pictum*. The mantel shelf was banked with double flowered sunflowers and white speciosum lilies on a bed of green. Sunflowers and white lilies were also arranged about the mirror, with small plants of *pandanus*, *cocos* and *dieffenbachia* and an alocasia as the centerpiece. A fine specimen of speciosum lily set on a pedestal hidden among small palms and ferns was set on each side of the mantel. Received second prize.

The pond lilies were one of the loveliest and most appreciated features of the exhibition. Chipman Brothers, Sandwich, Mass., sent a tubful of the rose colored variety of *Nymphaea odorata* right from headquarters. Professor Fairman, Rogers, Newport, R. I., sent *N. Devonianum*, *N. dentatum*, *N. cerulea* and *N. candidissimum*, also the Japanese *Nelumbium album* and a form of it with red striped margins. Mr. Benj. Grey, of Malden, who makes a specialty of aquatics, sent *Nymphaea stellata*, *N. Zanibarenis* in variety, the rose-colored *N. odorata*, *N. Devonianum* and *N. dentata*. Of *Pistia stratiotes* he showed immense heads. And Mr. E. D. Sturtevant, of Borden-town, N. J., who is said to have the largest variety of ornamental aquatic plants in the world, brought scores upon scores of his splendid Egyptian lotus blossoms.

Mr. L. W. Goodell, of Dwight, Mass., filled a large tank with beautiful lilies, also some rarities. He had *Nymphaea Marliacea chromatella*, the new yellow one, and which is supposed to be a natural hybrid between *N. flava* and *N. candidissima*. It is day-blooming, slightly fragrant, hardy, free growing and very free blooming, continuing to blossom from early summer till late fall. A pretty little white lily was *N. albo-pygmaea*, said to be a natural hybrid between these two species, and also hardy and copious. Among other lilies he had *N. alba*, *N. candidissima*, *N. scutifolia*, *N. Marliacea*, *N. dentata*, different varieties of *N. odorata* and of *N. Zanibarenis*. Among the last named was a very deep colored sort from N. Z. rose, which he has named *purpurea*. A leaf of *Victoria regia* was spread in the middle of the basin, and *Azolla Caroliniana* floated about like duckweed and *Limnobia Humboldtii*, water chestnuts (*Trapa*) and *Eichhornia crassipes* were at home in the tank. The new and rare *Eichhornia crerulea* was prettily in bloom; it is bluer than *E. crassipes*, and the plant creeps about in

matted fashion in shallow water in about like manner as do *verbenas* on dry land. *Myriophyllum proserpinoides* hung in lace-like fringe over the edges of the tank. *Limnanthemum Indicum* attracted attention because of its vigorous growth, and its pretty little white flowers whose surfaces are beautifully fringed or bearded. *Sagittaria Japonica* fl. pl. was in full flower, its large, extremely double, pure white flowers are very attractive and good to tell, the plant is hardy and easy to grow. *Limncharis Plumieri* was worthy of notice. It has very large foliage and a bunch of flower buds terminating a stout scape, but only one flower at a time is open. The zebra-striped rush, the variegated sweet flag and other plants went to help the display, and leaning over the tanks were huge specimens of the Egyptian papyrus plant.

SPECIAL PRIZE OFFERED BY THE AMERICAN FLORIST, AND AWARDED TO J. W. MANNING.

From Mr. Hunnewell and the Harvard Botanic Garden likewise came tubs of pond lilies in bloom.

Mr. Tricker from Staten Island, brought flowers and leaves of *Nymphaea "Mexicana"*. The flowers are yellow and somewhat fragrant and bear a close resemblance to those of *N. flava*; indeed, judging from the flowers, leaves, style of growth and other characteristics, such an expert as Mr. Sturtevant considers it identical with this species. Its very stout flower stems, however, are a little puzzling.

Mr. F. L. Ames, of North Easton, Mass., took first premium for six orchids with beautiful specimens of the following: *Cattleya Eldorado* having a dozen flowers, *C. Gaskelliana* with ten blooms, *Laelia callistoglossa*; bearing three spikes of splendid flowers, *Odontoglossum grande* with seven spikes, *Cypripedium Morganianum* with two spikes of three flowers each and a handsome specimen of *C. Veitchii*. Mr. J. L. Gardner, Brookline, was second with *Laelia crispata*, *Dendrobium Denarii*, *Vanda suavis*, *Miltonia spectabilis*, *Oncidium volax* and *Calogyne Massangeana*.

For the best collection of orchids in bloom Mr. Ames secured the leading prize. In this lot were the yellow flowering *Oncidium Kramerii*, the striking *Odontoglossum vexillarium superbum*, *Cypripedium macropterum*, *Bulbophyllum umbellatum*, *Odontoglossum albo-sanguineum*, a unique plant bearing one spike with thirteen decidedly marked blossoms on it, *Cypripedium centaurium superbum*, *C. lo-grande*, *Promenaea stapheloides*, a specimen of *Erides* affine with a drooping spike twenty inches long, and many other choice sorts.

Mr. Ames also got first premium for the best three orchids, these included *Cypripedium Curtisii* with five very large dark flowers, *Cattleya Warscewiczii* imperialis with two spikes bearing five immense blossoms, and *Odontoglossum vexillarium* with ten arching spikes of lovely glistening flowers. With *Laelia elegans Littleiana* Mr. Ames took first premium for the best single plant of orchid in bloom. It was a beauty, nearly four feet high and had a spike of eight brilliant blossoms. For the best single orchid plant to be judged by the following points, namely, condition, symmetry and size, 3 points, beauty, quality and quantity of flowers, 4 points, value and rarity of specimen, 3 points, Mr. Ames was awarded the premium for *Laelia crispata superba* bearing five spikes carrying forty-five flowers.

For a pair of palms in tubs not less than 24 inches in diameter, Mr. H. H. Hunnewell secured the leading honor with grand specimens of *Phenacophorum Seckellianum* and *Cocos Bonnetii*, and Mr. J. H. White, Brookline, was second with *Kentia Belmoreana* and *Areca lutescens*. For a pair of palms in tubs of 20 inches or less in diameter Mr. White got first honor with a splendid *ritchardia* and *latania*. Mr. White also got first premium for a pair of palms in 16-inch tubs, these included an *Areca Bausei* and a handsome *seafarthing*. And Mr. Ames got first and Mr. White second prize for a pair of palms in 12-inch pots.

Mr. Hunnewell got the first premium for the best six stove and greenhouse plants with *Phyllotomium Lindenii*, *Euphorbia villosa*, *Cissus discolor*, *Ficus Parcellae*, *Davallia Fijensis* and *Croton Williamsii*. Mr. J. L. Gardner, Brookline, and Mr. N. P. Kidder got the second and third prizes, respectively. Conspicuous among their exhibits were *Alocasia Sedeni*, *Maranta Lindenii*, *Cycas revoluta* and *Queen Victoria* and other crotons.

Mr. White got first premium for the best single specimen flowering plant which was a massive *Allamanda Hendersonii* in full bloom and trained close down on a trellis. Mr. J. L. Gardner got second prize for a specimen of *Agapanthus umbellatus* with 28 flower spikes.

In the ornamental foliaged plants class Mr. N. P. Kidder took first premium with *Maranta rosea-picta*, *Alocasia Thibautii*, the variegated *Ficus elastica*, *Philumium variegatum*, *Pandanus Veitchii* and a handsome *dieffenbachia*. Mr. White who got second honors had well grown and variegated plants of *Ficus elastica*, *cosproma*, *curya*, *alocasia*, *dieffenbachia* and *phormium*.

For the finest single specimen of variegated plant Mr. Ames was first with *Dracaena indivisa variegata*, Mr. Kidder was second with *Maranta illustris*, and Mr. G. A. Nickerson third.

In the class for six ferns exclusive of *Adiantum*, Mr. Kidder got first premium for *Nephrolepis davallioides furcata*, *N. pluma*, *N. rufescens*, *Microlepia hirta cristata*, *Davallia Fijensis* and *D. Mooreana*; Mr. Ames got second and Dr. C. G. Weld third. Among their collections were superb plants of *Nephrolepis cordifolia*, *Didymochlena umulata*, *Nephrolepis exaltata*, *N. rufescens trippinatifida*. For six *Adiantum* ferns Mr. Kidder was first and Dr. Weld second. Their collections included *Adiantum gracillimum*, *A. cuneatum*, *A. concinnum*, *A. Flemingii* and *A. tetrasporium*. Tree ferns were not represented by the tall thick stemmed *dicksonias* or *alsophias*, but by the dwarf *Lomaria Gibba*, fine plants with 6 feet wide heads of fronds.

SKETCHES AT THE EXHIBITION OF THE MASS. HORT. SOCIETY HELD AT BOSTON DURING THE CONVENTION OF THE S. A. F.

For selaginellas Mr. Kidder was first and Dr. Weld second. Prominent among the varieties were *S. plumosa*, *henioides*, *Mertensii* and *S. Wildenovii*. Fisher Brothers, of Montvale, Mass., sent a sample lot of lovely little plants of *Adiantum Farleyense*, and the Botanic Garden, Cambridge, sent a varied lot of large plants for decorative purposes.

For six drooping Mr. Hunnewell got first premium for magnificen, *Youngii*, *Bella superba*, *indivisa variegata*, *Robinsoniana* and *Shepherdii*. Dr. Weld got second for *Goldcana*, *Sedeni*, *Wellesleyana*, *Mooreana*, Mrs. H. H. Hunnewell and *Youngii*.

Mr. Kidder secured the premium for crotons in 12-inch pots; he had Earl of Derby, *Evsianium*, *Baron J. de Rothschild*, *Queen Victoria*, *nobile* and *Andraenum*. For crotons in 6-inch pots Dr. Weld was first, Mr. J. G. Gardner second, and Mr. G. A. Nickerson third. Among the best colored of their plants were variegatum, *revolutum*, *Queen Victoria*, *maculatum*, *Baron Rothschild*.

The finest croton in the exhibition was a specimen of *Queen Victoria* contributed by Mr. Geo. A. Nickerson, Dedham.

Mr. Ames got first premium for pitcher plants. They were splendidly grown in suspended baskets, and the pitchers were unusually large and deep colored; the kinds were *Nepenthes Burkei*, *N. Curtisii*, and *N. Mastersiana*. The United States Nurseries staged a lot of cut leaves of *Nepenthes*, as well as an interesting set of *sarracenias* and a nice pan of *Dionaea muscipula*.

The display of cut flowers was disappointing, neither annuals nor perennials averaging as good as one would hope to find in Boston. The dry weather was said to have been the cause of this.

The prizes offered by the AMERICAN FLORIST for the best collection of cut flowers of hardy perennials were secured by J. W. Manning, first, and Temple & Beard, second. These collections included *Rudbeckia purpurea* and several yellow *Rudbeckias*, *Liatris*, *monarda*, blue and cardinal *lobelias*, summer hyacinth, *Gallardia*, *phlox*, tiger, specimen and auratum lilies, *Helenium autumnale*, *Clematis Davidiana*, double and single multiflorous sunflowers, white day lily, red and white yarrow, butterfly weed, *Heuchera sanguinea*, *Plumbago Larpende*, *Senecio pulcher*, *Boltonia latispicata*, *clematis coccinea*, *Veronica subsessilis*, blue and cardinal delphiniums, blue and white campanulas, blue scabios, *Amorally Halii*, *Aconitum uncinatum*, *Eranthis Fraseri*, *Euphorbia corollata*, white musk mallow, *Stokesia corymbosa* and some white *chrysanthemums*.

Mrs. E. M. Gill got first prize for a collection of cut blooms of annuals with a miscellaneous assortment of unnamed common kinds of no great merit. *Verbenas* and some other annuals were so poor that the committee would not award them any prize. The recent dry weather was against great excellence in sweet peas, still some very pretty ones, *Blanche Perry* and *Weld* were shown. Dr. C. G. Weld got the Drear first prize for *gloxinias*. He had about 100 bottles with three blooms and a spray of maiden hair fern in each. Mr. J. W. Clark was first and Dr. Weld second for *gladioluses*, which were very pretty so far as they went, but rather lacking in variety.

Mr. W. Winter, of Mansfield, showed a collection of *dahlias* and one of *tuberous begonias*, the flowers in both cases being small. Apart from the bank of plants of *China asters* shown by D. Zirngiebel, there was nothing striking in this year. *Zinnias*

were ill-represented, and Drummond *phloxes* were not astonishing, but it was pleasant to find *salpiglossus* in favor. E. Sheppard & Son, Lowell, had a meritorious bank of cut flowers, the delphiniums and perennial *phloxes* among them being particularly good. From the Arnold Arboretum came a group of flowers of hardy heaths and Osbeck's *sumach*.

Both J. W. Manning and Temple & Beard had collections of sprays of foliage of hardy trees and shrubs. They placed particular stress upon variegated foliage, like *red-color beech*, cut-leaved foliage, like *Japan maples*, &c. Temple & Beard, W. C. Strong and J. W. Manning each furnished an assortment of evergreen coniferous trees in pots and tubs, and which were arranged outside the doors and about the hallways. Most of the plants had, evidently, been lifted from the open ground and potted for the occasion. They consisted mainly of *retinosporas*, *yews*, *spruces*, *firs*, *pinus*, *junipers* and the like.

The Trade Exhibit.

This valuable feature of the annual conventions of the S. A. F. shows material improvement each year and the exhibits this year were unusually full and complete. All the recent improvements in and additions to the rapidly lengthening list of articles necessary to the trade were to be found in one of the two halls. The growing importance of the trade is well shown by the great variety of material now used by the florist and this is brought to us with added force when they are all gathered together in an exhibit of this kind.

Following is a complete list of the exhibits:

Cefrey Florist Letter Co., Boston—Immortelle letters, inscriptions and designs and wheat sheaves with inscriptions in immortal letters.

Welch Bros., Boston—General line of florists' supplies and box for shipping cut flowers. The latter is made in several sizes and holds a number of metal bottled trays.

Ernst Kaufmann, Philadelphia—Wheat sheaves, metallic wreaths and a general line of florists' supplies.

August Rolker & Sons, New York—Wreaths of metallic flowers.

L. B. Brague, Hinsdale, Mass.—Lycopodium, cut hardy ferns, sphagnum and Christmas trees.

Thos. F. McCarthy, Boston—Florists' wire designs.

Dan'l B. Long, Buffalo, N. Y.—Photographs of floral arrangements.

J. Horace McFarland, Harrisburg, Pa.—Specimens of printing for florists.

United States Nurseries, Short Hills, N. J.—A very large and handsome display of orchids and decorative plants including a splendid collection of blooming *cyripediums*.

H. S. Miller & Co., Newark, N. J.—Animal bone fertilizers especially adapted for florists' use.

John Gardiner & Co., Philadelphia—Mushroom spawn.

Bowker Fertilizer Co., Boston—Plant food.

N. E. McCarthy & Co., Boston—General line of florists' supplies.

Hartford & Nichols, Boston—Lycopodium, cut ferns, moss and Christmas trees.

F. E. McAllister, New York—Bulbs and florists' supplies.

C. J. Kogge, West Hoboken, N. J.—House preserver consisting of a strip of duck about an inch wide saturated with rubber. It is wound around weak spots in

the hose and can be applied in a moment by any one.

W. C. Krick, Brooklyn, N. Y.—Immortelle letters, inscriptions, etc.

Parker & Wood, Boston—Bulbs, seeds, tools and general florists' supplies. A collection of cut blooms of sweet peas also shown by them was excellent. A folding wire plant stand which they had on exhibition received much favorable comment. It folds quite flat in a very ingenious way and promises to be very convenient.

H. Bayersdorfer & Co., Philadelphia—Baskets, wheat sheaves, metal wreaths and a very full line of general florists' supplies.

M. A. Bennett, Boston—Whale oil soap.

J. C. Vaughan, Chicago—Seeds, bulbs, tools and florists' supplies. Also plants of the new polyantha rose *Clotilde Souper*.

Ed. Jansen, New York—A fine display of novelties in baskets.

W. P. Simmons & Co., Geneva, O.—Trusses of 23 varieties of geraniums.

Aug. Jahn, New Bedford, Mass.—Gloxinias.

F. Becker, Cambridge, Mass.—Palms and like decorative plants.

C. Thurston, Paterson, N. J.—Specimen plants of a new begonia in the way of metallica.

H. E. Chitty, Paterson, N. J.—Blossoms of the new white carnation *Lizzie McGowan*.

Charles D. Ball, Holmesburgh, Philadelphia—An excellent display of palms, ferns and like decorative plants of the trade sizes of most in demand.

W. K. Harris, Philadelphia—Iron plant stand. The same that was illustrated in the FLORIST some time since.

H. A. Dreer, Philadelphia—Forcing bulbs and a large display of palms, ferns and like decorative plants of trade sizes. Also cut flowers of *gloxinias*, double fringed *petunias* and *cannas*.

Joseph Breck & Sons, Boston—Forcing bulbs, tools and implements. Also Smith's Hot Bed Mat, which is made of heavy water proof paper. It will probably prove very useful.

F. R. Pierson, Tarrytown, N. Y.—Bulbs of *Lilium Harrisii* and *freesias*. The display of *Harrisii* was very fine, some of the bulbs being of immense size. He also had photographs of houses and fields of bulbs in bloom and a fascinated stem of a lily which had borne 193 flowers.

R. & J. Farquhar & Co., Boston—Seeds, bulbs, tools, mushroom spawn, etc. Also the Xponset waterproof paper flower pot.

J. A. Penman, New York—The Dictionary of Gardening and Book of Ferns.

Willdin Pottery Co., Philadelphia—Flower pots in all sizes, including one with a new style of bottom which provides for ample drainage.

E. A. Ormsby, Melrose, Mass.—Ventilating apparatus.

Barlett & Dow, Lowell, Mass.—The Elliott Wheel Soak Hoe.

G. E. Adams & Co., Glens Falls, N. Y.—Pot washing machine.

A. T. Stearns Lumber Co., Boston—Cypress slash bars, gutters, etc.

Benj. Chase, Jr., Derry, N. H.—Plant stakes and labels.

E. Hippard, Youngstown, O.—Ventilating apparatus.

Quaker City Machine Works, Richmond, Ind.—The Evans' Challenge Ventilating Apparatus.

Richardson & Boynton, Chicago and New York—The Perfect Hot Water Heater.

D. E. Howatt, Poughkeepsie, N. Y.—The Acme Water Heater.

Gurney Hot Water Heater Co., Boston—The Gurney Hot Water Heater.

National Hot Water Heater Co., Boston and Chicago—The Spence Heater, Pierce, Butler & Pierce, Syracuse, N. Y.—The Florida Hot Water Heater.
—Hitchings & Co., New York—Hot water boilers and section of greenhouse fitted with the Hitchings ventilating apparatus.
F. W. Foster & Co., Boston—Heating apparatus.

Herendeen Mfg. Co., Geneva, N. Y.—The Furman boilers.

Waterbury Rubber Co., New York—Steel armored hose.

Jacob Hoffman Wagon Co., Cleveland, O.—Delivery wagon for florists.

Smith & Smith, Kenton, O.—Mailing and express boxes for plants.

Jas. R. Wotherspoon, Philadelphia—Watering pots and fumigators.

Chas. Fottler, Dorchester, Mass.—The Boston Rose Spray Hose nozzle.

John L. Diez & Co., Chicago—Sash bars, gutters, ventilators, etc.

Benj. Hammond, Fishkill-on-the-Hudson, N. Y.—A full line of his well known insecticides.

A. H. Hewes & Co., North Cambridge, Mass.—Flower pots, ornamental plant jars and vases.

Lockland Lumber Co., Lockland, O.—Cypress sash bars.

Edwin Lonsdale, Chestnut Hill, Philadelphia—Palms of trade sizes.

John Burton, Chestnut Hill, Philadelphia—Palms of trade sizes.

Siebrecht & Wadley, New Rochelle, N. Y.—Palms, ferns and like decorative plants.

Craig & Bro., Philadelphia—Palms, ferns and like decorative plants.

Wm. C. Strong, Brighton, Mass.—Conifers.

J. W. Manning, Reading, Mass.—Conifers.

Awards at the Trade Exhibition.

The Society of American Florists made the following awards at the trade exhibition:

First class certificates—Pitcher & Manda, for specimen cypripediums and anthuriums; Ed. Jansen, for baskets and wheat sheaves; H. Bayersdorfer & Co., for display of florists' supplies; Henry A. Dreer, for display of French cannas, glaxias and petunias.

Honorable mention—R. & J. Farquhar & Co., seeds and horticultural goods; Joseph Breck & Sons, general garden supplies; Smith & Smith, mailing and cut flower boxes; F. E. McAllister, collection of bulbs; Charles J. Kogge, house tender; Parker & Wood, garden implements; Craig & Bro., general collection of palms, etc.; Edwin Lonsdale, general collection of palms, etc.; J. C. Vaughan, collection of bulbs; H. E. Chitty, new carnation; T. F. McCarthy, wire designs; Siebrecht & Wadley, general collection of palms, etc.; Parker & Wood, Lilium Harrisii bulbs; W. C. Krick, hand made immortal letters; R. & J. Farquhar & Co., Lilium bulbs; Parker & Wood, folding plant stand; D. B. Long, floral photographs; Bartlett & Dow, the Elliott wheel hoe; F. R. Pierson, bulbs; F. E. McAllister, florists' supplies; E. Kaufman, florists' supplies; John Burton, collection of palms, etc.; Charles Fottler, hose nozzle; Jacob Hoffman Wagon Company, delivery wagon; Frank Becker, collection palms; James R. Wotherspoon, watering pots and fumigators; Charles D. Ball, palms, etc.; Cefrey Immortelle Letter Company, patent florists' letters; Henry A. Dreer, palms, etc.; Henry A. Dreer, bulbs.

The Bowling Match.

Standing room was at a premium at the bowling alleys of the Allen Gymnasium on Tuesday afternoon of the convention. It was a jovial, good natured crowd, and there was a great deal of pleasant badinage. Certain members of the society who are usually long on dignity were discovered occupying points of vantage and attired in smiles of eager anticipation.

The boys who set the pins had evidently prepared to do quick work, but on some of the alleys their task was evidently not quite as laborious as had been anticipated. Some of the clubs had been unable to bring their bowlers with them and had to make up teams from those members who happened to be present.

The New York club took the cup offered by the G. and F. Club of Boston, with a score of 976. The first Foster prize, a gold medal for best individual score made in the first game went to Robert Craig, of Philadelphia, who had a score of 191. The second Foster prize, a silver badge, went to E. J. Mepsted, of Buffalo, on a score of 175. No less than four were tied for third Foster prize, a silver badge, each having a score of 172, but on playing off the tie with three balls it was taken by Wm. Robinson, of the Boston club. The games were played on the six alleys, on the first string the three lowest to drop out, on the second string the lowest to drop out, the remaining two to play off. Following are the full scores:

NEW YORKS.

Theodore Roehrs	168	158	161
J. A. Pennan	136	169	234
Alexander Burns	139	159	147
W. S. Allen	142	131	128
C. H. Allen	165	165	128
Julius Roehrs	172	144	176

Club totals	912	913	976
Average	152	152	164

BOSTONS.

M. H. Norton	145	135	158
T. Cox	165	173	166
W. Edgar	128	172	168
J. Rought	142	163	95
W. Robinson	172	145	120
D. Allan	127	155	167

Club totals	879	943	904
Average	146	157	150

NEW JERSEYS.

J. N. May	153	158	Bowled out
I. Fosterman	154	160	
W. A. Manda	151	133	
W. Henshaw	152	134	
P. McDonald	138	121	
Joseph Manda	172	149	

Club totals	900	855	
Average	150	142	

BUFFALOS.

W. Scott	175	Bowled out
E. J. Mepsted	152

John Burton	131	
R. Craig	101	
W. K. Harris	86	
F. W. Young	76	
J. Westcott	127	

Club totals	756	
Average	126	

CHICAGOS.

G. L. Grant	149	Bowled out
W. Vilets	103	
F. J. King	109	
A. Adams	118	
J. T. Anthony	93	
J. C. Vaughan	67	

Club totals	639	
Average	106	

Mr. Taylor's brace, administered to the New York club just before the final string-

gle is undoubtedly what pulled them through. The Boston club braced too early.

The janitor at the alleys said it was the "hottest" bowling match he ever saw.

After the heavy weights had concluded their games, three special prizes, the first a silver fruit dish offered by the Gardeners' and Florists' Club of Boston and the second and third medals offered by F. W. Foster & Co., of Boston, were competed for by those who had not bowled in any of the teams.

The first prize was taken by Ed Jansen, of New York, with a score of 171, the second by Wm. Martin, of Boston, with a score of 157, and the third went to W. W. Coles, of Lansdowne, Pa., with a score of 147.

The Poison Hog-Meat Plant.

(*Aristolochia grandiflora*.) At the convention at Boston, Mr. E. D. Sturtevant, of Bordentown, N. J., showed me photographs of flowers and flower buds of this most wonderful plant, taken from a specimen now in bloom in his greenhouses at Bordentown. He had it under the name of *A. pellicum*, an appellation often applied to this species on account of the similarity in shape of the unopened flower buds to the body of a pelican at rest.

Mr. Sturtevant's flowers of it are unusually fine and larger than those we are told about in botanical books. When fully open, the broad part of the flower is twelve inches wide by 18 inches long, and to this length is added a long, slender tail-like twisted appendage, forty-two inches long, thus making the flower sixty inches long! Mr. Sturtevant described the open flowers to me as being of a deep wine color, mottled with creamy yellow, and so malodorous or stapelia-scented that flies lay their eggs in them and breed magots. The plant is a luxuriant tropical vine with large, cordate leaves. It has not seeded with Mr. Sturtevant, probably, he says, because the right insects have not yet come around to assist in fertilizing it. He raises his stock from cuttings.

Regarding this remarkable plant I find the following interesting communication in the *London Garden*: "This species, figured and described long ago in the 'Botanical Magazine,' seems to have been lost to English gardens. Until the recent introduction of an African species, *A. Goldianna*, the flower of this plant, was often quoted as next, in point of size, to the gigantic *Rafflesia Arnoldi*, which is the largest of known flowers. Like that, it possesses the disgusting odor, and the general color of color, too, is the same. The young buds are much bent and have the appearance of the head and beak of a pelican when that bird is at rest. The expanded limb of the perianth is terminated by a tail sometimes more than 18 inches in length (by measurement those of Mr. Sturtevant's flowers are 42 inches long, W. F.). Dr. Lunan relates

* * * that a whole herd of swine were poisoned by eating the roots and young leaves of the plant. From this it derives its English name, Poison Hog-meat. Mr. Myers was often led to compare the large, fœtid blossoms on the bushes to colored pocket handkerchiefs laid out to dry. It is a native of the West Indies and South America. And referring to the still larger flowered kind, *Aristolochia Goldianna*, let me quote from the same article in the *Garden*: "The flowers are enormous, the one figured (in the Bot. Mag.) having measured 26 inches by 11 inches. The perianth externally is greenish, barred and veined with maroon red, the inside is reddish

brown, marked and splashed with orange yellow. It is named in honor of the Rev. Hugh Goldie, of the United Presbyterian church missionary society, and living plants were first sent to Great Britain by him from the Old Calabar River. Gustav Mann also found it near Sierra Leone." WM. FALCONER.

The Growing Importance of the Easter Trade and How to Prepare for It.

By JAMES DEAN, HAY RIDGE, N. Y.
[Read at the Boston Convention of the S. A. F. August 19.]

Easter, the anniversary of our Lord's resurrection from the dead, is the greatest of all festivals of the Christian church. Occurring each year between the 22nd day of March and the 25th day of April, it has been observed by all Christians as a festival of joy; and in many ways have the Easter holidays, at different periods of our history, been spent; in joyous sports, in processions, in attendance at church, in almsgiving, in the liberation of prisoners, and in the use of the Paschal or Easter eggs to such an extent that the price of the eggs advanced greatly, and in none of the works which refer to Easter in the earlier period of our history can we find where the price of flowers advanced, or where flowers were used to any extent at the festivals or decorations occurring during the Easter holidays; and indeed we can rapidly leave the earlier period and refer to a time within the memory of most of us when flowers or plants were seldom used either in church decorations or as gifts during the Easter holidays. Now the custom has become almost universal and the floral decorations of the churches and the larger cities at Easter are magnificent and on a scale of grandeur unthought of fifteen years ago and the Easter of to-day might well be called a festival of flowers. The custom of sending an Easter gift of cut flowers seems to have advanced to such an extent that dealers in choice Easter cards complain that it has seriously affected the sale of their cards at Easter.

Twenty years ago we had no Easter trade worth speaking of. At that time we grew a few plants of azaleas, L. longifloras, roses, mostly Plantiers, spiræa, dentzia and some Dutch hyacinths, but all of the above plants we grew in very limited quantities and mostly small plants. For the next five or six years the increase in Easter plants was very slight and hardly noticeable. From 1878 until 1888 the demand for Easter plants and flowers increased rapidly, and in some years exceeded the supply. For the past two years I have not noticed any increase in the Easter trade of New York City. It may be that there are more plants and flowers grown. It is certain that some of the New York City florists had any difficulty in supplying themselves with all the plants and flowers that their business required and that at reasonable prices. It is generally thought that, outside of New York and perhaps Philadelphia, the increase of Easter trade will continue for some years to come, especially so in the smaller cities, which will follow the customs of the larger ones.

Before entering on the subject of how to prepare for Easter there are a few questions which I shall read and every florist interested in the growing of plants and flowers for Easter will or should answer them for himself.

First, Is there a paying market in your vicinity for Easter plants in excess of the quantity that was grown for last Easter?

Second, To what extent would the market warrant the increase in the output of plants and flowers?

Third, What varieties can be grown and sold at a profit?

Fourth, As the shipping of Easter plants to a distance when in full flower is both expensive and risky, and as the flowers are liable to injury, the grower will have to depend largely on a home market for the sale of his plants.

First I shall take up the Easter lily, which in importance is placed at the head of the list of Easter plants, and under that head I include both longiflorum and Harrisii. Fully three quarters of all the lilies that are now forced are Harrisii, which is a great deal more profitable to grow, as it flowers more freely than the longiflorum, and the plants are not liable to come blind. It can be forced with safety at a higher temperature than the longiflorum, and if the plants are removed to a temperature of 50° at night and given air during the day two weeks before the flowers open they will be just as firm as the longiflorum and you will be able to cut nearly double the number of flowers. Most of the lily bulbs come from Bermuda, arriving here during the months of July and August. On the receipt of the bulbs they are potted in a light sandy loam to which has been added about one-third of well rotted manure, using a 5½ and 6-inch pot for the 5 to 7-inch bulbs; a 6½ and 7-inch pot for the 7 to 9-inch bulbs, and a 7 and 8-inch pot for the 9 to 12-inch bulbs. In potting the bulb we place it about one inch below the surface of soil. They are then set close together in a frame out of doors, given a good watering and covered with a mulch of hay or straw which prevents the soil from drying out so rapidly and saves watering. They can remain out of doors until frost comes, although a degree or two of frost will not injure the plants. From the time they are brought into the greenhouse until New Years a night temperature of 40° to 45° with plenty of air during the day is all they require. After New Years they may be removed to another house or the night temperature increased to 60° or 65° and even to 70° if the weather proves bad and there is little sunshine. Try to have the flower buds well above the foliage six weeks before Easter, so that standing in the doorway of the greenhouse you can plainly see all the buds. Bearing constantly in mind that it is a great deal easier to hold the flowers back by shading and giving plenty of air which hardens and stiffens them and enables them to bear transportation better than when you are compelled to hurry them into flower by steaming the pipes and watering them with warm water. Under such treatment they are fit only for the rubbish heap. Before delivery we cover each flower separately with fine tissue paper, cutting the paper into squares of 10 inches. The buds or unopened flowers are treated in the same way. In fact, we wrap up every plant we send out for Easter, and although it takes a great deal of time in the rush of Easter work we find it pays well as we have little complaint of flowers damaged in transportation.

The azalea is second in importance on the list of Easter plants, with its symmetrical head covered with flowers of the most gorgeous colors. It is a most decided favorite for Easter decorations. The most of the azaleas we force come from Ghent in Belgium, where the plants are grown in immense quantities. They are shipped here during October, and although packed carefully they do not

always arrive in such a condition that they can be used the same season, often dropping their foliage and flower buds, in which case they have to be grown another year before flowering. The successful Easter grower never depends on his last importation of azaleas, for the plants he will force for Easter, but always carries at least one year's stock of plants ahead, in case of loss or damage. The azalea during the winter months can be kept in a night temperature of 40° with plenty of air during the day until eight weeks before Easter. If Easter comes in March 55° will answer at night; if Easter comes in April 50° will be enough. It will be necessary to set some of the late varieties, such as Souv. de Prince Albert, Louisa Pyniert, Leonie Van Houtte and Souv. de Prince Albert alba, into heat two weeks earlier, and here I want to say, do not stand your azaleas in the shade of some convenient tree during the summer months and expect them to flower with you the following winter. Give them the open sunshine. Plunging or planting them out in a frame where you have grown your pansies will answer. If the soil is heavy add sand and leaf mold, as the azalea delights in a light loose soil. Mulch but do not use manure as it would injure, if not kill the plants. Water and syringe to keep down red spider. Treated thus they will make a good growth and mature their flower buds and give you a good crop of flowers when wanted. Be careful that the azaleas are housed before frost, as that would injure the flower buds.

The hydrangea is pushing our old friend, the azalea, very close for second place on the list as an Easter plant. And certainly a specimen plant of Ottaka is a sight to behold; covered with its immense clusters of bright pink flowers, often measuring over 12 inches in diameter, of a color that shows equally as well by gas as daylight, it is indeed a rival not to be trifled with. Thos. Hogg is still an old favorite with us all, with its many clusters of pure white flowers, and will always retain a prominent place among the plants grown for Easter.

Hydrangea rosea with its beautiful rose colored flowers as its name implies, deserves to be grown in all collections, although the flowers are not as large as Ottaka, or the plant such a vigorous grower. The color and the freeness with which it produces its flowers will always give it a place as a market variety. We have one or two new hydrangeas that promise to rival if not surpass Ottaka, but they have not been thoroughly tested. By mixing iron filings with the soil where the plants are grown during the summer, and when potted watering with alum water, you can change the color of the flowers of Ottaka or rosea to a blue.

The hydrangea is easily propagated from cuttings. A cutting struck in March, planted out before the first of May in a good rich soil and mulched and watered regularly, will by October make a plant fit to go into a 7 or 8-inch pot. Do not pinch or top the hydrangeas after the middle of June that are wanted for Easter forcing. It would be well to secure the hydrangea against frost as it is liable to injure the flower buds. I lift mine by the 10th of October, pot them in good rich soil and place them until New Years in a cold frame, giving air during the day and covering the frames at night to protect them from frost. They are brought into the greenhouse at New Years and given a temperature of 60° at night with air during the day for three weeks, then increase the temperature to 65° at night

with little air during the day, until the flowers begin to color. Then gradually give them more air during the day and reduce the temperature at night, which will give a bright color to your flowers and harden the plant, enabling it to stand out in the air without wilting, as a great many of our city florists have to display their plants in the open air in front of their stores. This rule ought to hold good for all plants that are forced for flowers, especially so with the hydrangea and Plantier rose, both of which if grown in a warm temperature and exposed without being hardened will wilt very badly if exposed to the cool air out of doors. The hydrangea when in growth requires plenty of water, and an occasional watering of liquid manure will be a benefit to the plant.

The genista, or as some prefer to call it cytisus, comes next to the hydrangea in importance as an Easter plant. There are two varieties grown. Genista Canariensis is best grown in its natural state and best suited for decorations where large plants are required. Genista racemosa is not of such strong growth as Canariensis and is better adapted for small plants and easily kept in shape by trimming which it stands well. The flowers are a little larger and of a deeper yellow than Canariensis. The genista is easily grown from cuttings. The plants grow freely in a light soil to which has been added some well rotted manure. Shifted as they require they soon make salable plants, but be careful not to overpot. Do not plant the genista in the open ground during summer as they lift very poorly, very often losing all their foliage. Plunge and mulch the plants out of doors during the summer, and see that they are watered and not allowed to get dry. They can be brought into the house the latter part of October. They will require very little forcing for Easter. 40° to 45° at night with plenty of air during the day until the first of February, when the temperature can be increased to 50° at night and less air given during the day, is all they will require. From the first of February they will need plenty of water, and one or two waterings with manure water that is not too strong will be of benefit to the plants, especially if they are grown in small pots.

The above four varieties of plants are those that are mostly grown and find the readiest sale at Easter in New York. There are other plants also largely grown, such as spiraea, deutzia, callas, roses, rhododendrons and geraniums. The cultivation of the above plants is so well understood even by the novice, that it will not be necessary for me to go into details. There are a large number of bulbs also grown for Easter, consisting of Dutch hyacinths and tulips, mostly double; narcissus and valley. The cultivation of the above is well known by all, and I shall only speak of the cultivation of the valley in pots. Plant 15 slips in a 5-inch pot 21 days before Easter and place them in the dark under the bench in a warm greenhouse for two weeks. At the end of that time they can be bunched and given light and air, which will give the foliage its natural color and harden the flowers. It makes a beautiful as well as an appropriate gift for Easter, and is in great demand and can be sold at a handsome profit.

There are also used at Easter large numbers of palms and other foliage plants; but as they are not grown especially for Easter but carried in stock, they can hardly come under the head of Easter plants. After Easter a great many of the

plants and flowers that are used for decorations in the churches are distributed among the hospitals and the sick.

Grow only the amount of plants that you can dispose of at Easter at a profit, for often the lily flower that will bring 15 cents for Easter will not bring half that amount the day after, and if Easter comes early it will be almost impossible to sell plants of azaleas, hydrangeas and many of the other plants, at any price, that are left over after Easter.

After New Year's the grower with Easter plants to force will often find himself with a house of plants that may have enough flowers on to make him hesitate to throw them out; he may reason that there is time to finish cutting the crop and by extra firing he will be in time with his plants for Easter, but does he count the cost of extra fuel? Or the danger he runs of getting late with his plants, or the injury that he does his plants by the high temperature that he will have to maintain to get them in flower in time? I think not, or he would at the proper time have thrown them out and given his Easter plants the time and attention which they require. Every grower will have to a great measure rely on his own judgment in the forcing of his plants, largely depending on the advanced state that they are in at New Year's which is the time we generally start to force for Easter and the house that he will use to force his plants in. If the house has a southerly exposure less time will be required than if the house is situated so that it only catches the sun for a short time during the day.

I have attempted to make this a practical paper and have given without reserve the manner in which I prepare and grow my plants for Easter, and if I have added anything new that will assist my brother florist in his Easter business, I shall feel that the time given to the preparation of this essay was not lost.

OBITUARY.

HENRY BENNETT.—A cablegram received August 15 contained the sad announcement that on the 12th, Henry Bennett, the famous rosarian of Shepperton, England, had passed away. Mr. Bennett had a host of American friends who will be deeply grieved to learn of his death.

Regarding his valuable work in the improvement of the rose, Mr. E. G. Hill writes as follows:

"In the death of Henry Bennett, floriculture loses a man who has been a positive force; a most conscientious worker has left its ranks and gone to his reward beyond this sphere of action. Rosarians have lost a most valued colleague, and his work is cut short at a time when it could ill be spared.

"Henry Bennett was a scientific and careful worker in every line to which he turned his attention, always seeking some definite object; how well he succeeded can be judged by the splendid productions which he has given the rose world.

"His life up to some twelve years since was principally devoted to stock raising and the production of fine cattle; he argued with himself that the same results were to be had in the raising of new roses that had attended his more than successful efforts in the improvement of his herd.

"In rose growing, he first sought to produce a free-flowering type with the characteristics of the Hybrid Perpetuals as to color and form, and the perpetual character of the Tea varieties. If many

of his first set of roses were somewhat disappointing, he it said, however, that they represented a type for which we had long been longing and looking, and which, previous to this time, had been represented only by three or four varieties of Hybrid Teas, and these were accidental seedlings, probably produced by insect agency; it may be said, however, that Beauty of Stapleford is still grown and much admired.

"The advent of Mr. Bennett's first set of Hybrid Teas had the good effect of stimulating the other raisers of seedling roses to seek crosses of a similar strain and to-day we grow many beautiful varieties, which, except for Mr. Bennett's efforts, we should never have possessed.

"His second set contained Lady Mary Fitz-Williams, Grace Darling, Countess of Pembroke and Heinrich Schultheis, four magnificent varieties, the latter being an H. P. The first named is justly esteemed in Europe as being, perhaps, one of the very finest varieties in cultivation, and to see it in the English rose nurseries is a sight never to be forgotten; if it did equally well in America we should place a much higher estimate on the labors of our friend who has done so much for another Hybrid Tea which has placed Mr. Bennett's name high with those who cultivate the rose in the open ground. We cannot pass without noticing Viscountess Folkestone, Meteor, Mrs. Jno. Laing, Wm. F. Bennett—all most remarkable varieties. Who, except perhaps M. Pierre Guillot, can show so many valuable additions to the lists of our roses?

"Her Majesty, Puritan, and Princess Beatrice were disappointing to those who purchased them for the special purpose for which they were so confidently recommended. That there are roses of considerable merit, no one will question, but no forcing roses, they failed in many necessary requirements.

"The disappointment attending their careful trial in America was very sorely felt by Mr. Bennett, and he was keenly sensitive to the resulting criticism of his American friends. He had a right to expect great things from Princess Beatrice as a forer by its growth and behavior at Shepperton; for, to say the least, it is a remarkably fine bud when nicely grown; it has made good record in the Southern States and also in California as a splendid out door rose.

"Just previous to his death, Mr. Bennett had received certificates for his seedling H. P. Rose, Capt. Hayward, a magnificent scarlet crimson, of fine form and heavy texture, as the writer can testify.

"Mr. Bennett's achievements command our admiration, and any faults into which he may have fallen, were those of the head and not of the heart, for he was above anything that was questionable or that savored of trickery.

"He was honest, earnest and thoughtful in all his undertakings, and he deserved better treatment than he received from the no small number of English rosarians who imagined that they and they alone knew how to produce seedling roses. So bitter and vindictive in their attacks were some of these assailants, that they proved to be no small factors in hastening the death of this good and honorable man.

"He never tired of referring to the kindly welcome given him by his co-laborers and florist friends in America, and he held them in grateful remembrance for the warm reception given him by the Chicago convention.

"A year ago it was the writer's privilege to spend a day under Mr. Bennett's hospitable roof and to learn from him

much that was valuable and interesting respecting roses and the production of new varieties. Out of the many thousands of young seedling plants then at Shepperton, and the great number of ripening seed pods, we shall be greatly disappointed if there do not issue from his latest work, results that cannot fail to add lustre to Mr. Bennett's name; and that will make him the foremost rosarian of his day and generation."

A portrait of Mr. Bennett appeared in our issue of June 1 last.

Scarcity of White Flowers in Fall.

As Mr. S. Taplin, in the *FLORIST* of August 1, wisely observes, a dearth of white flowers frequently troubles the florist. Particularly is this noticeable during September and part of October. This year the dearth will be more generally felt than ever on account of the dry weather experienced in many localities. And it is probably safe to predict that all outside flowers will be few and far between during the coming fall.

Mr. Taplin speaks of double white primroses and white azaleas as flowers of sufficient merit to supply this want. But to this assertion we the east would be reluctant to agree. Of all finny flowers an azalea is the worst, and as it cannot be cut with a stem, it is absolutely useless for our trade as at present developed, and the day is long gone by when any florist of this section will use them as cut flowers, provided anything else is obtainable that will answer his purpose.

Primroses may be of service. At one time they were grown around New York in some quantity, but now seldom are any seen. Other flowers that pay better have superseded them.

Besides, when chrysanthemums are in, white flowers are then plentiful. No man would use a primrose or an azalea for any purpose as a cut flower in preference to a chrysanthemum. Neither would any of our customers buy them instead.

It is during the month of October that the want of white flowers is most generally felt. And our aim should be to provide those flowers that are not only of use for funeral purposes, but can also be of advantage for boxes of cut flowers and corsage bouquets. No flower is of merit now unless it can be had with a stem, and is of some stability in its texture.

The flowers which best answer this description and which by judicious planning can be had in bloom during October, are carnations, candytuft, sweet peas, mignonette pyrethrum, and early geraniums. With the exceptions of carnations, all these should be prepared specially for October flowering, and as a second crop. The seed sown and the plants tended with this end in view. The expense is but trifling, but the convenience is great. There is no difficulty in having all the flowers above enumerated, as plentiful in October as in July.

This year, however, many calculations as to the supply of flowers for this month, will probably fail of success. The drought is so lasting and severe that all outside plants suffer greatly in consequence.

No better carnation for early work can be had than President De Graw. An old variety, but one of many merits. The flower buds set early, and as the plant is a fast grower it is usually of large size by the fall. Cuttings started in December, planted outside the following April, and not pinched back after the first week in August, will be sure to be covered with flowers by October.

Portia, for a scarlet, can also be had in flower in early season. Carnations

brought into flower in this way need not be used for winter work. They can be grown as an extra supply, and when their time of service is over, be thrown away or potted, stored in cold frames, and then sold as pot plants in early spring.

Albany, N. Y. ALFRED E. WHITTLE.

SITUATIONS, WANTS, FOR SALE.

THE BOSTON MEETING.

For six years the florists of America have met and for five times it has been a pleasant duty to accord each succeeding occasion the greatest success. This sixth reunion at Boston can only fill its proper place in the line when viewed from another side, not from that of actual convention work accomplished. It is in the magnificent exhibitions and decorations; in the delightful excursions to ideal country homes; in the lengthened opportunities for making and renewing acquaintances that we may claim this gathering has through the eye given us broader and more ennobling ideals than any former years' work. But in the line of essays and discussions, particularly the latter, there was much room for improvement.

It is no new criticism to say that members will straggle and prove dilatory at the business sessions, while to compel discussion has been at all times difficult. Is it strange then with two fine halls packed with exhibits of every class, with some variation in hotel arrangements and a few lost in the crooked streets that the actual attendance was lighter than it should have been. Out of it all we read that there is both work and study for our officers to make the next session at Toronto what it should be. How it shall be done should be stated to our members in season and in a convincing manner to induce a full attendance with our generous hearted Canadian friends.

THE PAPER upon Easter Plants by Mr. Jas. Dean, which was read before the Boston convention and which we print in this issue, is one of the most valuable that has been developed in the meetings of the society. Mr. Dean's reputation in his great specialty—the growing of Easter plants—is so well known that anything from his pen will be read with interest, and this particular paper should be kept for reference, as it gives full instructions with the dates for starting and temperatures to be maintained so completely as to leave nothing to be desired.

THE ANNUAL exhibition of the Mass. Hort. Society held in Boston during convention week, was simply grand. Competent judges declared that it has never been equalled in America. Every plant shown was a specimen and the grouping was admirable. Our page of illustrations of this exhibition will, we believe, be highly appreciated by our readers, though it can give but a faint idea of the beauty and educational value of the exhibition.

Quite a NUMBER of interesting communications have been crowded out of this issue by press of convention matter. They will appear at an early date.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XVI.

"ACTS OF GOD" ETC.

Oh, yes, I remember those orchids very well indeed. They were hybrids which you had produced after several years of experimenting and they reflected great credit upon your skill and patience as a student of nature. Quite likely to get you into a law suit are they? Let me hear all about it.

I understand then, you sold them for \$500 to Judge Cheatham who left them in your hot house while he and his family were in Europe and they were destroyed by the fire which broke out when your place was struck by lightning late in the summer. The Judge now threatens to sue for the \$500. Well, take courage, he'll not do anything of the kind. You insured them against fire, that was as far as you were called upon to go. The descent of the lightning was what the law denominates an "act of God."

Let me define an "act of God" for you. It is some occurrence taking place in the natural world which is not brought about by any human agency and which no human foresight could have prevented or which can not be attributed to any carelessness or negligence. Now a stroke of lightning, an earthquake, a cloudburst, a tornado, a tidal wave, a sinking of the earth's crust, etc., are all "acts of God."

Lightning rods? Unless there was a special contract to that effect no warehouse man would be obliged to put rods on his building. In fact, scientific men are not at all agreed that rods afford any protection, and many even claim that they serve to increase the danger by attracting the destructive fluid.

But before the law will accept a so-called "act of God" as an excuse you must show that the damage was the direct and immediate result. For instance, suppose the lightning should strike next door and the building be wrapped in flames, if you showed negligence or carelessness in removing the property of others entrusted to you for safe keeping you might be liable. It would depend somewhat upon the contract of storage.

Or again, suppose for some reason the ground where your hot houses stand should begin to subside. The law would expect you to take warning and remove all property charged for storage by you to a safe place. Nature often gives warning of contemplated blows. A sudden and extraordinary darkening of the sky ought to be sufficient warning for you to remove your delicate plants to a place of safety.

You ask me what the law would be in case you made a contract to deliver so many thousand cut roses and then fell dangerously ill. It would not be such an act of God as would save you from a suit for damages unless you could show that the contract contemplated roses grown by your own personal care and attention. The law never attempts to make a man do an impossible thing.

For instance, let us suppose that I am a famous portrait painter and make a contract to paint your portrait within one year from date, but just after making the contract I have an attack of rheumatism which stiffens my index finger. Equity in this case would let me be a judge whether I could paint the portrait or not.

Now to come back to this matter of act of God, as you ship goods by railway and steamboat it may be worth your while to listen for a few moments. A common carrier is always responsible for any loss or injury happening to goods while in his keeping for the purposes of his contract. Mark my words well. Now the exceptions are "acts of God" and the public enemies.

The common carrier is required to see to it that no loss or injury comes to the goods in his charge by reason of his negligence or his design, either personal or constructive. That is to say, if you ship a lot of rare fruit trees and a "cloudburst" sinks the track, derails the train and a carboy of acid is broken and your trees destroyed by it you'd have no cause of action. But on the other hand, if the track was merely washed away by the breaking of a dam, no matter how securely built, the carrier would be held for the damage. Now there's another point. After the happening of the "cloudburst" if you could show negligence in removing your goods to a place of safety you could recover.

You ask me whether the depredations of train robbers may be excused as acts of God or the public enemies. Of course not. The carrier might after paying such a loss fall back upon the county or state for his damages. True, if there was war between this country and England and a party of Canadian guerillas should swoop down upon a railway train and carry away your shipment of cut flowers you'd have no redress against the company. A carrier would not be held to protect your goods against the whole British Empire.

You say there is another phase to Judge Cheatham's demand against you. He takes the position that you guaranteed to him that your hot houses were fire proof. I don't think the use of the words "fire proof" means any absolute guarantee of indestructibility. No building can be absolutely fire proof. The words are merely descriptive of a certain class of buildings. A maker of "burglar proof safes" would not be able to do business very long if he had to pay back all the money stolen from his "burglar proofs." They may be "burglar proof" provided the skilled mechanic who enters the premises can not explode his dynamite, but not otherwise.

Has our friend Judge Cheatham any other points? No? Well then I think you are pretty safe, but my advice to you is that you print on the receipts which you give for plants stored or left with you for culture and training the conditions under which you receive them. But this will not be sufficient. You must add a clause like this: "Above conditions are hereby agreed to," and make the owner put his or her name or initials on a duplicate receipt.

Trouble? Of course it's trouble to breathe in hot weather and to keep warm in cold, but it must be done. A little more trouble one way or the other makes very slight difference. But there is one good thing about trouble. It pretty generally pays.

You remember that rose bush in front of my door? Well, you told me that unless I sprayed it with insecticides every morning I'd have no roses. I took your advice and you recollect what a crop of beauties I had. My neighbor Slowman refused to take so much trouble. He had a splendid crop of worms.

Well, what is the question? I may answer by saying that in most of the

states of the union the destruction by fire of leased premises breaks the lease and puts the parties where they were before its execution. In all important leases, however, it is customary to provide for such a contingency.

AMERICAN FLORIST CO., Chicago.

The Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president. JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

MR. H. L. VILMORIN, of the Paris seed firm, Vilmorin Andrieux & Co., is visiting this country.

KANSAS CITY, MO.—T. Lee Adams and the Harnden Seed Co. were damaged by fire and water about August 20.

OAKSHOTT & MILLARD, well known seedsmen of Reading, England, are reported to have failed, and offer to settle at 25 cents on the dollar.

MR. J. COMONT, representing Messrs. Jas. Carter, Dunnett & Beale, of London, is now on his annual visit to this country and attended the Boston convention.

MR. CHAS. HENDERSON, Mr. John A. Watson, Robert George, A. D. Cowan, J. E. Robinson, R. & J. Farquhar, L. L. May and other seedsmen attended the Boston convention of florists.

INDIANAPOLIS, IND., August 31, 1890. Am. Florist Co., Chicago, Ill., *Gents*:—You stated in your August 1 issue that I had "lately assigned." This is false, as I did not make an assignment. Now August 15 you say I am "offering 25 cents on the dollar. I am not at this present time, but have settled with everybody. Don't owe anything. It is time you get settled on this matter. The J. A. Everitt Seed Co. is continuing the business. Do you understand?

Truly, J. A. EVERITT.

Insects and Diseases.

Conducted by CHARLES F. BAKER, Agricultural College, P. O., Igham Co., Mich. Send specimens of unidentified insects and diseased plants to him at above address.

The Lily Disease.

(*Polyctis cana*, Berk.)

The great bane of the lily grower's life is the so-called "lily spot" or "lily disease." In England florists have been troubled with it a great deal more than they have in this country. It is, however, becoming prevalent here, as letters from florists in different parts of the country show. The disease is caused by a fungus growth. The fungus is a *Botrytis* of the *Polyctis* type, and among mycologists is known as *Polyctis cana*, Berk. It was brought to the notice of vegetable pathologists in 1869, and was first studied by Rev. M. J. Berkeley, and in 1881 was described by him in the *Gardener's Chronicle*. Others have also spent considerable time in the study of it. We are, however, indebted to the later and more thorough investigations of Prof. Marshall Ward for the greater part of our knowledge in regard to it.

A good idea of its action, when most virulent, may be gained from a letter written by a florist in Walthamstow, England. He says: "At first it was supposed that the plants had been struck by lightning, because others in beds near by were not touched. The next day those that had looked black the day before were blacker than ever and the buds of the green ones were all covered with small light brown spots. On in-

specting the plants the third day it was found that not only were the plants first attacked, completely spoiled, but that it had spread like 'wild fire' to plants thirty yards distant." Mr. W. G. Smith, of Dunstable, England, in describing the work of this fungus says: "The lily stems are left like dead, brown sticks and the leaves hang around the withered discolored stems like fragments of ragged, brown, sodden tissue paper." Only the spots appear during dry weather, but a wet spell will cause a heavy growth of a grey fungus—mould-like in appearance—to spring up around the spots. After this decay progresses very rapidly and the growth of the fungus increases. It does not always make its appearance on the outside, but often grows on the inside of the leaves and stems as mycelium only. A vertical section through a decayed bud or badly diseased patch shows the grey growth around the spots to be large numbers of straight branched conidiophores (Fig. 1) which break through the skin of the plants from the inside, and which finally bear the conidia (Fig. 1 B) or spores. These conidiophores (Fig. 1 C) get to be from one to three millimeters in length. After they have bored their way through the walls and cuticle of the epidermis cells (Fig. 2) and made considerable growth, they send out from two to five branches (Fig. 2 A) at the end, which are short and stout. During this time the main stalk has become sepia-brown in color and divided (Fig. 1 D) by partitions. Soon there appear on the enlarged ends of the branches little projections which ultimately become the conidia (Fig. 1 B). By exam-

Fig. 1. (After Smith.)

ining a cross section of a decayed bud the hyphae are to be found in every part. The mycelium entirely fill all the cell cavities and lacunae of the calyx and corolla, and also the tissues of the anthers and ovary. Where the fungus thus occupies the tissues, no perfect cells can be found, because the effect of the hyphae so completely occupying the tissues, is to change the whole into a brown homogeneous decayed mass. Through this run the strands of the mycelium. The mycelium, as it exists fresh in the plant, and branches freely, has many partitions and is colorless. With age, however, it may take on a pale sepia tint. The colorless branches which come to the surface to form conidiophores, on growing older, turn brown, as do also the conidia as they ripen. When a conidium (Fig. 1 B)

has attained maturity it is ovoid, pale brown in color, and is 1.50 to 1.40 mm. long by 1.70 to 1.60 mm. broad. A small portion of the sterigma (Fig. 1 B) which held it to the conidiophore may often be found at the smaller end of the conidium. They are produced and ripen very rapidly.

This fungus seems to attack the living tissues directly, and that below the sur-

Fig. 2. (After Ward.)

face. Unless the conditions are favorable the spores will not be produced and only mycelium can be found. In this case it would be difficult for the fungus to spread from plant to plant. The growing young plant may possibly carry the spores up from where they have lodged in the soil, or they may be blown directly to the plant by wind. It is an extremely variable fungus. Sometimes it might be said to be stemless, while at others it is extended to a considerable length. It may produce a large number of spores on each branch, or the branches may be much drawn out and only have one spore each. An interesting fact, and one which was somewhat misleading at first, is that the lily spot is almost identical in appearance with the carnation spot, which is produced by nematode worms. Mr. W. G. Smith has even stated that the nematode worms are almost invariably found in connection with the lily disease. Besides attacking most species of lily, *Polyctis cana* has been known to occur on tulips, humea and scrophularia.

A number of florists state that from their experience the lily disease does not attack the same plants year after year. This is not known, however, to be the rule in every case. Its ravages are not confined to the open air, as it also attacks plants in the greenhouse. Here the conditions of damp air, damp soil and sudden changes of temperature, which seem to greatly aggravate the disease, can be regulated. If, however, we wish to rid the lilies of the disease—thoroughly and effectually—more strenuous measures must be employed. In considering the question of remedies the fact must be taken into account that the mycelium of the fungus grows underneath the skin of the plant, and consequently any remedy applied to the surface could only destroy or prevent the formation of spores, and so save some plants and protect others. Prof. L. K. Taft has kindly furnished me with the following account of the mode of treatment: "Carefully gather and burn the diseased leaves, buds and stalks after they have died down. The next spring as soon as the plants have made a

good start spray them thoroughly with ammoniated solution of copper carbonate, made by dissolving one ounce of copper carbonate in one quart of ammonia (20°) and diluting with twenty gallons of water. If this is repeated every ten days it will greatly reduce, if not entirely prevent, the attack. Care should be taken not to touch the interior of the open flowers with the solution, as it would spot them. A solution of liver of sulphur—one-half ounce to the gallon—has also a good effect."

The Cemetery Superintendents.

The Association of American Cemetery Superintendents held a very successful meeting in Boston on same dates as the convention of the S. A. F. There were many essays and discussions of great practical value to those having charge of the "silent cities of the dead," and the social feature of such gatherings was not forgotten. The convention visited the beautiful cemeteries in the vicinity of Boston, and found much to interest and instruct.

A round hand bouquet consisting of six white water lilies of medium size and one scarlet gladiolus flower in the center with a border of ferns is retailed by the Italian fakirs in New York City for five cents.

AMERICAN FLORIST CO.,

32 La Salle Street, CHICAGO

SEATTLE, WASH.—Nearly all the florists of this city are putting up new houses. Meany & Ward are putting up three 60x11 feet each. The Seattle Floral Co. is erecting one large house adjoining the one they already had on the corner of Second and Cedar streets. Mr. C. W. Lawton, the pioneer florist of this city, is putting up a fine new house with deep and heavy brick foundation, the only one in Seattle with such a foundation. Mr. Hoffmeister, of the Washington Floral Co., is putting up a new rose house. He is going to heat with steam, because he will need steam power to pump water into the tank he is erecting. He expects to have an independent water system of his own. Mr. Lawton will use hot water in his new house. The Seattle Floral Company will use steam, and Meany & Ward are putting in flues. Louis Ziegler, formerly head gardener for E. F. Witter, has leased the greenhouse belonging to W. H. Davis, proprietor of the Cloverdale Nursery, and will hereafter conduct it.

LONDON, CAN.—The Western Fair for 1890 will be held in this city September 18 to 27. In the horticultural department prizes are offered for plants in pots to the amount of \$260, and for cut flowers and floral arrangements to the amount of \$206, a total of 466 for plants and flowers. But the prizes are cut up into rather small amounts by the large number of items.

KENOSHA, WIS.—Lewis Turner has built a new house 100x14.

Geo. Jackman & Son

Begin to offer a large and well grown

Stock of the following:

ORIGINAL AND LARGEST GROWERS OF
LILIUM HARRISII, BETTER KNOWN AS **THE BERMUDA EASTER LILY**.

BULBS NOW READY FOR DELIVERY.
 THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "*Bermuda Easter Lily*"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

→ HALF A MILLION BULBS. ←

Be sure you get the genuine *Liliium Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand; "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Foreign Notes.

AN ENGLISH National Orchid Society is being haiked of.

BEGONIA HAAGEANA or Schirffi is meeting with favor in England.

ROSE SHOWS were held at 38 different points in England during June and July.

A PROJECT is on foot in England to erect a memorial to the late B. S. Williams.

AN ORCHID journal will soon be published at Rio de Janeiro, in both Latin and Portuguese.

EARLY IN JUNE a rose show was held at Vienna at which about 100,000 cut blooms were shown.

THERE is a society of Florists in York, England, which has had an unbroken existence of over 100 years.

THE SUM of \$500,000 is annually expended for the maintenance and improvement of the parks of London.

ROSE LA FRANCE DE 1889 is said to approach Paul Neyron in size, but is more beautiful. Its color is rose magenta.

PELAGORUM Gloire du Plessis, sent out this year, is claimed to be a decided improvement on Souvenir de Mirande.

MR. JOHN STEWART, for twenty-five years secretary of the Royal Caledonian Horticultural Society died recently, aged 76.

THE PARKS and open spaces of London under municipal control have increased during the past twenty years from 178 acres to over 3,000 acres.

THERE was a beautiful exhibition of ferns at Chiswick July 22 and 23, on the occasion of the Fern Conference at which several valuable essays upon ferns were read.

THERE was a very fine display of flowers at the exhibition of the National Carnation and Picotee Society of England, in spite of the fact that the season has been very unfavorable.

THE PROVINCIAL show of the National Rose Society of England held at Birmingham, July 17, was the best ever given by the society, both as regards quantity and quality of blooms displayed.

ENGLISH GARDENERS are having the same trouble with *Primula obconica* that we have had here. Reports of poisoning from this plant are now frequent in English horticultural periodicals.

AN ENGLISH gardener who was discharged by his employer without notice, sued him for a week's wages in lieu of a week's notice, and he was non-suited by the judge. A discussion is now going on as to the justice or injustice of this ruling.

OUR ENGLISH cousins are strong on societies. They have their Rose Society, Chrysanthemum Society, Dahlia Society, Carnation and Picotee Society, Primula and Auricula Society, and in fact a society to look after the interests of nearly every one of the popular flowers.

PANSIES.

A FEW POINTS TO CONSIDER.

QUALITY the important feature in pansies is well taken care of in my strain; in fact so well that many of my customers say there are no better ones. Those who bought a few hundred on trial last season are placing their orders now for a fully supply.

THE PLANTS are nice stocky seedlings that can be mailed or expressed safely long distances and at a moderate cost. Samples will be mailed for 10 cts.

QUANTITY I can furnish them in any number, 100 or 10,000, all from the same beds and same seed. A trial order is respectfully solicited.

PRICE Free by mail 100, 75 cts.; 500, \$3; by express 500, \$2 50; 1000, \$5; 2500 and upward to per cent discount.

CACTUSES.

The most characteristic of prominent American ornamental plants, and the most neglected.

In the August and September issues of THE AMERICAN GARDEN the genus is more fully treated than in any book yet published.

THE TITLES OF THE ARTICLES FOLLOW:

Ackermann's Phyllocactus (*Phyllocactus Ackermannii*); 2 pages, illustrated.
 Cactuses in-doors and out; 8½ pages, illustrated.
 Opuntia Fruit as Food; 1 page, illustrated.
 Cactus Landscapes; 3 pages, illustrated.
 Cactuses under Culture; 1 page, illustrated.
 The Cactus Family; 3½ pages, illustrated.
 The General Management of Cactuses; 2 pages.
 Cactuses in Place and Out of Place; 1 page.
 A Wonderland of Cactuses; 4½ pages, illustrated.
 The Propagation of Cactuses; 1 page, illustrated.
 Native Florida Cactuses; 3 pages, illustrated.
 Epiphyllums; 1½ pages, illustrated.
 Cactus Growing in Florida; 1 page.
 Spines and Prickles; 3 1-2 pages, illustrated.

These issues of the magazine also contain 183 other articles and 82 illustrations on gardening subjects.

Price 20 cents per number; the two Cactus numbers together for 35 cents.

SUBSCRIPTION TERMS, \$2.00 PER YEAR; \$1.00 FOR SIX MONTHS.

SPECIAL OFFER: These two Cactus numbers sent **FREE** to any new subscriber sending \$2.00 now for a year's subscription. This offer continues only so long as the present limited supply lasts. If these are gone when your order arrives, the numbers for the *BEST OF THIS YEAR* will be sent *GRATIS* and your time extended to January, 1892.

No free "specimens." The magazine now averages over 100 pages a month, containing over 142 articles and 45 illustrations. It costs more to produce, and is the largest and most prominent horticultural magazine in the world.

THE RURAL PUBLISHING CO., Times Building, NEW YORK.

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the S standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN.** We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from 1½-inch to 7-inch inclusive, and 250 pots each from 8-inch to 12 inch inclusive, making 7,250 pieces, made from the same molds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

A. T. CEFREY'S

Patent Improved
Florists'

Immortelle Letter and
Pin Fastener.

CEFREY LETTER CO.

GENTLEMEN:—I find the new machine-made Immortelle Letters manufactured by you very valuable and in many respects superior to anything of the kind we have ever handled. Their uniformity of shape, size and color, the convenient form in which they are put up, and the excellent device for fastening them to the work, are among the most commendable points in your letters. Please double my last order and deliver as soon as possible. Yours truly,
W. J. STEWART.

A. T. Cefrey

CEFREY LETTER CO., 13 Green St., Boston.

DEAR SIR:—Please ship me five thousand letters as soon as possible. They are the best and most practical letters in the market. The pin fasteners are a long way ahead of the old fashioned way of wiring. Yours truly,
N. F. MCCARTHY.

CEFREY LETTER CO., Boston, Mass.

DEAR SIR:—Send at once ten thousand small letters and five hundred large (two inch).
GALVIN BROS., Boston.

We wish to announce to all florists that we have removed to much larger quarters, **No. 13 GREEN STREET, BOSTON.**

We make our letters by machinery; they are not only more perfect in size, shape and color, but are the best and cheapest in the market. Our 2-inch letters are only two and a half cents, and the 1½-inch letters are only two cents apiece. Your customers will have no others. Be up with the times! Send us your orders and we will ship you a supply for this winter. **They are the best in the market.**

THE CEFREY LETTER CO., 13 Green Street, BOSTON, MASS.

Passiflora Constance Elliott.

H. C.—Without knowing the condition of the plant and the precise cultural conditions under which it is grown we are unable to say what is the matter with this particular specimen. Constance Elliott, as a rule, blooms freely enough. Vigorous young plants do not bloom as freely as do those of restricted growth, or old plants. For instance, pot bound plants after being planted outdoors soon come into bloom and flower freely till they begin to grow rankly, then they stop blooming till towards fall when they begin again. Old plants wintered in pots and in a frame or greenhouse and planted out in spring act in the same way. But plants that have lived outside over winter make a rapid and full growth as a rule before they display any effort to bloom, and they seldom begin flowering before midsummer, often not so soon.

THERE is probably no more popular hardy shrub to-day than Hydrangea grandiflora, and until recently the supply has nearly always been unequal to the demand. But the large stock of well grown plants to be seen in the nurseries of the Dingle & Conard Co. at West Grove, Pa., would indicate that for the present the shortage, if any, will not be nearly as great as in the past.

A PROJECT is on foot to establish a cut flower exchange in Boston.

FLORAL * DESIGNS.

A book which tells how to make them
and shows how they look. Fifty tinted
plates of approved designs, in fine shape
for showing to customers in place of the
bare wire designs; it "gets there" much
better, and looks pretty while doing it.
It is a good investment for any working
florist at **\$3.50**, postpaid, and can be
had of

J. HORACE McFARLAND,
Box 55. HARRISBURG, PA.

LOOK OUT FOR FROST.

MR. MAY also sends a note of the same tenor as that received earlier from Mr. Craig, and which we print elsewhere.

CONSIDERING the many difficulties encountered in securing a clear, sharp photograph of a large group of people, the one we reproduce on another page is certainly most excellent.

IF THE PRESSMAN does his full duty the portrait of President M. H. Norton, which appears on another page, will be the best portrait we have ever published. The engraver's proof shows a beautiful piece of work.

Sober Thoughts After Boston.

The convention is past and gone. The gathering was such as might reasonably be expected, but it was plainly seen that so great were the attractions outside of the convention proper that the meetings with one exception were not as fully attended, neither were the papers discussed as at previous conventions.

Papers and essays to be of value in discussions should be pert, crisp and short. There are papers, like Mr. Dean's, that could not be discussed, from the fact that there was nothing left unsaid. The executive committee will do well to consider how to get only good essays and papers.

The committee on nomenclature made an excellent report as far as their material would allow. It is pleasing to note that the so-called fraudulent substitutions are not nearly as numerous as reported. In fact the cry of wolf came from the rustling of the leaves by a very small mouse in nine cases out of ten.

The exhibition of the Mass. Hort. Society with its magnificent array of glorious plants, its grand display of water lilies and other aquatics, the elegant table and mantel decorations, was worth to every visitor all the years waiting, all the money it cost and the time devoted, if there had not been even so much as a meeting in convention or a paper read.

Some members thought that the attendance at the sessions ought to have been much larger. Where was the most information to be found? To a few in the convention, to many in the exhibition. As yet the society has no mortgage on its member's locomotion—and it never will have.

Then somebody says the society ought to do this and do that; very often these somebody sit on the fence and bark instead of coming into the ring to wrestle with the wrongs. No, the Society of American Florists isn't perfect, it doesn't want to be, and it never will be, as it hopes always to have some work to do.

That old ghost of ours will not down, and it seems to me he will never be laid; at least I hope not. Just think what he did and how he appeared. First at Mr. Hews of Cambridge; second, Mrs. Hayes of Lexington; third, Mr. Hunnewell's, Wellesley; fourth, on Nantasket Beach. Isn't it dreadful.

But what delightful remembrances many have of the week at Boston, and they will be fresh at Toronto next year.

JOHN THORPE.

Floral Arrangements.

The dinner table decorations at Boston were a pretty pointed illustration of the fact that it was a dinner table decorated with flowers and not a decoration of flowers upon a table that the society

wished to encourage. The floral decorations should never interfere with the usefulness of the table as a dinner table for this is its primary object, and the decorations of plants and flowers upon the table should never be so heavy as to preclude from one another the full view of guests sitting opposite each other.

Another point taught us at Boston was that vases, clocks or other stiff figures made of flowers are not in favor. Even the poor negro minstrel with his banjo, all so life-like and painstakingly built of blossoms was considered unfit company for aesthetic Boston, and after the second day like a drunken piper he was removed from public view and shut up in a back room.

The mantel decorations were also an impressive lesson. No tyro could fail to appreciate the superiority of the fine material, studied plans, careful workmanship and elegant arrangement of the first prize mantel. Furthermore it was a lesson to some of us that there is room in the florists' business for several other kinds of flowers besides roses and carnations, not one of which was employed in this decoration. Our business has got to widen out. The lovely lapagerias never before appealed more eloquently for public favor; they were presented to us in their spotless beauty and appropriate usefulness. Orchids tell in all fine work. And Pandanus Veitchii and Cocos Weddelliana made one of the brightest marks of their existence. And in this decoration two plants in particular, namely, the white-flowered agapanthus and Alocasia macrorrhiza variegata were used with telling effect. The white blossoms brightened up the sombreness of the ferns and so too had the white variegated leaves of the alocasia a cheerful bearing. And Mr. Allan tells me this agapanthus is as easily grown as the blue-flowered one, and too that it comes true and readily from seed.

W. F.

Boston Notes.

The annual meeting of the Gardeners and Florists' Club was held at Horticultural Hall on Tuesday, September 2. The following officers were elected to serve for the ensuing year. President, Lucius H. Foster; Vice-President, Jackson Dawson; Secretary, J. J. Cunningham; Financial Secretary, W. H. Elliott; Treasurer, P. Welch.

The general committee of fifty which has had in charge all arrangements for the S. A. F. convention made a final report which was accepted with thanks.

On September 1 occurred the annual entertainment provided by Mr. Ed. Hatch for a few of his friends at his cottage on Scituate Beach. The invitations announced that the object of the meeting was "the best method of disposing of clams." The subject received due attention.

At the weekly show at Horticultural Hall on August 30 Mr. T. Rowland showed a specially fine collection of cut blooms of tuberous begonias.

One of the most interesting plants shown on Saturday September 16 was a seedling *exepidulum* raised by Fitcher & Manda. It is a hybrid between *C. Veitchianum* and *C. concolor*. It is stated that this is the first distinct hybrid *exepidulum* raised and flowered in America. It has been named *Arnoldianum* in honor of Mr. Hicks Arnold, of New York, into whose hands it has passed to become a part of his already large collection of rare *exepidiums*. A silver medal was awarded to it by the Mass. Hort. Society.

It is to be regretted that in the account published in the preceding number of the *Florist* describing the visit of the S. A. F. to Lexington the elegant spread provided for the visitors should have been located in "the yard." Those who were so fortunate as to participate in that pleasant entertainment will remember the beautiful shady grove where the tent was spread as being not exactly a yard, and the magnificent estate over which Mr. Comley presides as head gardener, with its hundreds of acres of lawn and woodland, will not be soon forgotten by those who were there. W. J. S.

The Award on Pots at Boston.

ED. AM. FLORIST.—In the last number (September 1) of the *Am. Florist* I notice in the advertisement of A. H. Hews & Co. a statement that the committee on Standard Pots were not impartial in their award. It is due to that committee to say that each member is regarded by the trade generally as being both competent and honest, and I know that in this instance they discharged their duties with painstaking carefulness. It will be difficult to get judges to serve in the future if such attacks on their character are permitted to go unrebuked. ROBT. CRAIG, Philadelphia, September 8, 1890.

M. H. Norton.

Mr. Michael H. Norton the newly elected President of the Society of American Florists, was born in Roxbury, Mass. which is now a part of the city of Boston, and has always lived in Roxbury or Dorchester, hence is a Boston boy. He obtained his education in the Boston schools and when quite a young man served two years on the Cushing estate at Belmont under that famous old Boston gardener C. M. Atkinson. After leaving Mr. Atkinson's wing, he, together with his brother Mr. Patrick Norton started in business in Dorchester under the name of Norton Bros. Their first venture was in growing vegetables for the Boston market, the whole outfit at the beginning being three hotel sash. The following season they erected greenhouses and began the cultivation of bedding plants and violets, the latter being quite a venture at that time. One of their first and best advisers was the late Peter Henderson, and that his advice was sound is demonstrated by the abundant success of the young firm from the very start. It was not long before the Bon Silene, known then as the "Boston Rose," claimed their attention, and for some years they were the largest growers of that most popular bud, their whole cut being taken for some years by New York firms. Some fifteen years ago Norton Bros. opened in the city a retail flower store, and there the subject of our sketch has presided ever since, while his brother has attended to

the greenhouse department. They do a prosperous business and enjoy a reputation in the trade excelled by none. But beyond this Mr. Norton is esteemed by his acquaintances and friends for his genial manner and whole-souled hospitality. He is a man whose friendship is highly esteemed, his advice is always sound, whose company is a perpetual sunshine and whose popularity among his acquaintances is probably unequalled by that of any man in the society to-day.

Mr. Norton is a past president of the Gardeners' and Florists' Club of Boston, also a member of the flower committee of the Mass. Hort. Society. He is 48 years of age.

The season has now arrived when all roses that are expected to produce flowers for the coming winter should be planted without delay. In doing so good strong vigorous plants only should be used; otherwise it will be only loss of time and trouble to plant at this late season, but if good strong plants from not less than 4-inch pots are chosen and planted in shallow benches of not over 3½ inches of soil (3 inches would be better) and treated reasonably well, they will produce a good crop of flowers by Christmas, and continue bearing well for the rest of the season; and where flowers are wanted as late as July next year this method will produce the best results. As soon as possible after planted press the soil good and solid, then cover the same with a very thin mulching of well decomposed cow or sheep manure (not over half an inch); this helps to keep the soil in the right condition for the roots to begin working through it at once.

Great care should be exercised in the ventilation at this season as a moist, stagnated atmosphere, or a strong draught through the house, will be almost sure to produce mildew. Should this show itself apply sulphur at once to check it. One of the best means we have found to do this is to close the house early enough in the afternoon to run the temperature up to 80° or 85°, then take a good sulphur bellows and fill the house full with sulphur; this method, if rightly understood, takes comparatively little sulphur; it is necessary to have the sulphur quite dry, and we have found that sifting it through a fine screen, such as a muslin netting, or similar material, greatly helps, as the object should be to produce a cloud like appearance, so that every leaf in the house gets a small portion of the dust on it. Then if the above temperature can be maintained in the house for twenty-five or thirty minutes all the fungoid growth will be destroyed. This method need only be followed till fire heat is applied; after that sulphur on the pipes will effectually destroy mildew.

When the roses are already planted more care will be required now in the watering, as the days grow shorter, that they are not over watered. Nothing will give them a worse check than this at this season of the year; their roots have not

yet fully spread all through the soil, therefore it is very easily soured if too much water is given. Keep all weeds and dead leaves cleaned off; the former robs the plant of its nourishment and the latter harbor and increase insect pests. Keep the plants tied up as they need it; this allows free circulation of air all through the plants, which is very necessary to keep them healthy. Give all the air possible on all favorable days, do all watering as nearly as possible early in the day so as to allow all surplus moisture to dry off before night; otherwise if a damp close atmosphere exists during the night it will soon produce a prolific crop of black spot, mildew and other kindred diseases.

Should the nights get chilly now it is far better to put enough fire heat in to expel the raw air; as often when the temperature outside indicates from 50° to 55°, that of the greenhouse may stand 56° to 58°, warm enough actually, yet in the early morning a very heavy dew can be seen all over the plants and the younger leaves will hang with drops like pearls. Many think this shows a healthy growth, so it does to some extent, but if these conditions continue for four or five nights in succession the chances are that some fine sunny morning the young leaves and shoots will begin to curl up, slightly at first, but before the day is over it may spread over a large part of the house, and ere another day is over the green leaves will fall off as if struck by an electric shock, and the grower stands with a wry face and wonders what has struck his previously fine looking house of plants. Where a house gets hit this way it simply means half the year's produce is gone, all of which can be avoided by giving just enough fire heat to expel the damp atmosphere. To many of our readers this undoubtedly will seem like superfluous information as it has been described several times in our columns before, yet as I write this several letters before me show that all your readers do not yet understand the importance of it, hence the repetition. JOHN N. MAY.

Summit, N. J.

Early Hybrids.

Where these are wanted no time should be lost in preparing the plants by carefully drying them off to ripen them thoroughly. Some varieties differ in their requirements in this line. *Magna Charta* will stand almost any amount in reason, while *Mrs. John Laing* would be positively injured under the same conditions. The main object should be to get good solid wood without causing the shoots to shrivel at any time during the process of ripening. There are many small details about this branch of rose forcing that can only be learned by experience, and as our seasons vary so much exactly the same treatment will hardly ever answer for two seasons, therefore it might be well for the beginner to note well all the conditions of his plants as he goes along, then where he makes a good success of it he can imitate it as nearly as possible the next season; and where it fails he can avoid the same also. There is no rule of thumb to follow and yet the same general principles are applicable at all times. JOHN N. MAY.

Hybrid Perpetual Roses at Roger Williams Park, Providence, R. I.

We try to make the roses one of the features of the park and have three borders each containing about 350 plants of

M. H. NORTON

the standard old varieties and some of more recent date. The winter of 1889-90 was not favorable to them and the prospect at the first of the season was anything but good, but by extra care and attention we managed to secure an extraordinary bloom fully two weeks late which continued till the first week in July; then came the hot weather and the blooms were soon gone. Then commenced the fight with that arch enemy of the rose in this climate—red spider. Powerful syringings every day and they began to make new wood and bloom again and at this writing the plants are doubled in size, constantly showing bloom since the first of the season.

Among those to make the best showing are Paul Neyron, Mme. I. Pereire, Gabriel Luizet, Prince Camille de Rohan, Celine Forestier, Coquette des Blanchés, Merveille de Lyon, Eugene Appert, Countess Serenye, Baron Rothschild, Alfred Colomb and others just as well known. They have been a constant source of admiration from the beginning of the season and they are likely to continue to be so till frost comes. We have given the borders two dressings of phosphate and two of liquid manure through the blooming season. For one, consider the possibilities with the hybrid perpetual rose great even in this climate. G. H. TASKER.

Roger Williams Park, Providence, R. I., August 18.

Roses in Solid Beds.

"The best Mermets that come into the Chicago market are grown by George Klehm at Arlington Heights and they are grown in solid beds," appeared in February 1 issue of the *FLORIST*. In the same

account it is also stated that these Mermets are four years old; furthermore, which is of great importance, it is said: "He is cutting great quantities of magnificent bloom and beautiful color. The blooms have so much substance that they last in good condition a remarkably long time after being cut."

There is much in the above system of growing roses to make it worthy of consideration by every rose grower in the land, for when we hear that the best Mermets that come to the Chicago market are grown in a solid bed we wonder if they can not be grown elsewhere with like results, for it should be every grower's aim to send the best; and when you combine the best with great quantities of magnificent blooms of beautiful color it leaves nothing to be desired except a better foliage. E. S. Bartholomew also says in his article on overhead heating of August 15, "I know of roses that have been planted twelve years in a solid bed and are at this time perfectly healthy and giving abundant blooms." I have also seen abundant Mernet blooms, magnificent Perles, good Niphetos, Gontiers, Bons and the best Brides and Bennetts, all grown in solid beds and I am fully convinced that cuttings taken from solid beds, under the same treatment as those taken from the bench, will make stronger growth if planted on bench the following season. I would like to have the experience and views of brother florists on the subject of roses grown in solid beds, for there is certainly much less labor attached to roses grown in this way.

GRANT J. MARPLE.

Swarthmore, Pa.

It seems to have been satisfactorily settled that while each of these systems

has its advantages, either will prove satisfactory in most cases, provided the treatment of the plants is adapted to the conditions under which they are growing. But the raised bench has a great advantage in the fact that in the dark days of winter the quantity of moisture in the soil can be more accurately regulated, and that a chance over-watering will not prove such a permanent damage as it would on a solid bed.—Ed.]

Number of Blooms Cut

Mr. J. A. Balmer, Vincennes, Ind., sends us the following record of blooms cut, showing the comparative productiveness of five varieties of roses as grown by him, and which he has given us permission to print in full.

The table covers seven months of the season of 1889-90. The plants were 3-inch stuff, benched June 20, all in same soil and all had same treatment, temperature and light and were in the same house.

Winter Blooming Plants.

The florist who does a local trade often finds that a little extra variety in his cut flower stock is a great advantage, not only on account of the better effect he is enabled to create in an otherwise hackneyed design, but also from the fact that a certain degree of economy in flowers may thus be secured just at the time that economy in flowers is a special object.

Of course it is well understood that there are many plants that are well suited for a local trade that would not prove profitable if grown in large quantities and sent into a wholesale market, and it is with this understanding in view that the following brief notes have been written.

Euphorbia Jacquiniiflora is one of these winter blooming plants that deserves more recognition than has been accorded it of late years, being easy to manage and seldom failing to produce at least two crops of its graceful sprays of bright scarlet flowers during the winter.

The flowers of this *euphorbia* last well after cutting, and the contrast between its dark green leaves and brilliant petals (or bracts rather) is very striking and attractive. If more convenient to do so, *Euphorbia Jacquiniiflora* may be grown as a pot plant, and if a little liquid manure be given from time to time as the growth progresses some fair spikes of bloom may be obtained, but to secure the best result the plants should be planted out on a bench during the summer so that they become well established before winter sets in, selecting for this purpose a warm corner in a rose house, or house of similar temperature and full exposure to sunlight.

A light loam enriched with some dry

cow dung is all the compost necessary, in addition to which some liquid manure may be given as the condition of the plants may require.

Cuttings of the plant in question are best made of half-ripened wood, and will root readily in a warm house, providing they are not over watered before they become calloused.

A few of the free flowering shrubby begonias are also very useful for this purpose, for when planted out on a bench in a warm house they grow very rapidly, and are scarcely ever out of bloom.

Of these *B. Saundersiana* is probably the best of the red varieties for general use, its drooping clusters of flowers and buds varying from deep pink to bright red.

If space can be spared for it to develop *B. rubra* is also an excellent species when treated in the manner recommended above. But *B. rubra* is such a rampant grower when in congenial quarters that it soon takes up too much space, and for that reason is not always desirable, though its flowers are large, brightly colored and very effective.

Among the large number of good pink flowered begonias there are a few that are specially prominent for winter use, and in the latter list should be included *B. insignis* and *B. Ingramii*, both of which are excellent, while among the white varieties *B. nitida*, *B. odorata* and the very well known *B. semperflorens* may be classed with the most useful.

Another useful plant to the local florist (and indeed to the wholesale grower also) is *Cyclamen persicum*, long and favorably known to many growers, yet but little used on this side of the ocean until the past two or three years.

The many shades of color, from dark crimson to pure white that may be found among a lot of seedling cyclamens of a good strain, are found very convenient and effective in cut flower arrangements, and by a little good management the plants may be brought forward in successive lots so as to secure a constant supply of flowers during the winter and spring.

Daphne indica alba is another first rate winter bloomer, and produces its Jasmine-like flowers in close trusses and in great profusion. The flowers are not only attractive in appearance, but also delightfully fragrant and last well when cut.

This plant does well under similar treatment to that given to camellias, and like the latter grows best when planted out in a solid bed, only being particular in regard to drainage, as the *daphne* will not endure stagnant moisture at the root.

The propagation of *daphne* is readily effected by means of cuttings made from half-ripened growth and placed on moderate bottom heat, the chief precaution necessary to success being to avoid the wilting of the cuttings at any time.

W. H. TAPLIN.

The S. A. F. at Wellesley.

Our full page illustration is engraved from the photograph taken on the grounds of Mr. H. H. Hunnewell at Wellesley, Mass., Thursday afternoon, August 21, and shows in a group the majority of those who were in attendance at the Boston convention of the Society of American Florists. The view is from the steps in front of Mr. Hunnewell's residence, overlooking the broad expanse of lawn which extends to the road in the distance, where are faintly outlined some of the vehicles which conveyed the party from and to the station.

Catalogue Classification.

As we are approaching the chrysanthemum season a few remarks on their habits and the desirability of certain varieties for certain purposes may not be amiss. It is an undisputed fact that we have a number of varieties that are worthless for general purposes, and these same varieties are the cream of all the chrysanthemums, when grown in a way that will reveal their merits.

In catalogue descriptions we are informed of the color and size of the flower, but in very few cases, in fact none to my knowledge, where a poor grower is plainly so stated. I mean a poor grower for general purposes, or grown in the way that nine-tenths of all the chrysanthemums are grown, planted out in the open ground. I believe aside from the evil of not describing the habit of the plant, the seller is doing an injury to himself by selling to the purchaser a variety unsuitable for his purpose, although the variety may be the very cream of his collection when grown in a certain way and for a specific purpose. I believe that if chrysanthemum specialists in compiling their catalogues would class them in a way that the buyer could select those varieties that are suitable for out door culture, and vice versa, there would be less complaints of the following nature. I made a list at the exhibition from So and So's collection and sent him an order but did not get the varieties ordered. I have personal knowledge of instances of the above nature. When the parties received just what they sent for, but they want of a knowledge of the habits of the different varieties and their requirements, produced very different results from what they expected. I feel certain that the evil done in this way is the means of disgusting large numbers of amateurs, and professionals too. There are a number of the finest varieties of this Queen of the Autumn that ought not, and can not with any degree of success be planted out of doors, whereas if planted in a bed or on a bench in a greenhouse, the plants and buds properly thinned they will be a joy and a delight to their possessor.

Where large quantities of seedlings are grown and it is undesirable to house so many of them, a good way to test them is to take cuttings from the strongest points, number the plant and cuttings with the same number; when the cuttings are rooted put in small pots and when established plant on a bench in the greenhouse six inches apart, keep all side shoots pinched out as soon as they appear, and whenever the buds are large enough to handle pinch off all but the center one. In this way all varieties worth keeping can be determined and the old stools saved for cuttings without the trouble and expense of housing the worthless varieties.

The devotees of this popular class of plants will have to exercise considerable care in selecting from the large number of seedlings annually sent out, although generally they have each their peculiar merits. A general knowledge of the

merits or demerits of all the varieties is quite out of the question. It is therefore imperative that the disseminator describe the habit of the plant in addition to the color and size of the flower. Good varieties that have their peculiarities of growth would receive the attention their merits deserve, the frequent complaints of trickery in this branch of the trade would be less common and varieties of sterling merit would receive proper cultural attention.

JOHN DALLAS.

Seasonable Notes.

I have just returned from a visit among chrysanthemum growers and am sorry to say that I found a great many plants more or less crippled. In many plants no less than from six to eight shoots are blind and crippled. Now it is no use to leave a shoot that is blind or imperfect; cut it clear out to the first healthy growth. Crippled shoots always have very thick imperfect leaves; these leaves get thicker and thicker until they will soon be the 32nd part of an inch thick; the sap these leaves absorb is the sap that ought to go to make fine flowers. The off at once the crippled thick leathery leaves that are where fine buds should now be forming.

Watch carefully for perfect buds and as soon as selected take off those not required. Be careful in thinning out the lateral growths; do not allow any growth to extend beyond the height of the flower buds selected to remain; flower buds must have the coign of vantage from this out.

Cautionously water all plants that remain outside in pots; don't forget that the equinoctial storms are about due and that it may rain for four or five days. Mix as much brains as you can in watering for the next three weeks.

Many grow plants in the open ground for decoration and even for exhibition. All plants growing in the open ground should be dug around one week previous to lifting; this cutting the roots will result in new feeders being formed within the space between the digging and the stem of the plant. If plants are intended to be put in 12-inch pots they should be dug around so that there is a 12-inch ball to be potted. After digging around I water thoroughly and when ready to lift I prefer to do it in dry weather rather than wet.

JOHN THORPE.

AGAVE VIRGINICA.—"J. E. B." Ky., sends a specimen of this for name, and remarks: "I was riding up a high clay and lime stone hill at sun up in June and was exhilarated by the odor from some flower. I searched and found a bed of this in bloom. The fragrance was delightful." It is a hardy herbaceous native species of modest pretensions. Its leaves are annual—most perennial as is the case with the agaves so common in cultivation, and unlike them too, this species blooms every year. The flowers are small, yellowish and scattered along simple or branched scapes three to five feet high and arising from a tuft of fleshy, rough margined leaves. An interesting plant for amateurs, but not one that commercial florists could handle to advantage except as one of a large assortment of plants.

THE NEXT annual convention of the Association of American Cemetery Superintendents will be held at Detroit, opening September 10, 1891.

THE SOCIETY OF AMERICAN FLORISTS, AT MR. H. H. HUNNEWELL'S, WELLESLEY, MASS. AUGUST 21, 1890.

Long Island Notes.

BY WM. FALCONER.

CHINA ASTERS.—All spring sowings are now past, but those sown out of doors May 28 are coming nicely into bloom.

NICOTIANA AFFINIS sown during the first week of June are in fine bloom and the plants in perfect condition. Older sowings have been cleared away because they had become so seedy.

HELIANTHUS RIGIDUS.—If there is one summerflower more than another you should get it is this one. The flowers are bright, comely, elegant, and the plant is a hardly perennial of the easiest cultivation, 4 to 6 feet high, very copious, and never a weed.

FOR BRIGHT COLORING. all summer long on light land what can surpass the dwarf, striped single petunias?

DAHLIAS.—Some folks who a year or two ago grew dahlias beautifully are now wondering why their plants don't blossom as well as they used to.

OLD DELPHINIUMS that were cut back as soon as they had done blooming are, more or less, in flower again.

If you forgot to plant some bulbs of *Crocus speciosus*, *Colchicum speciosum*, *Amaryllis Belladonna* or *Sternbergia lutea* last spring you have missed a treat in the way of fall flowers.

POLYGONUM CRISPATUM and its lesser form *P. c. var. crispum* do spread tremendously, but when they are in full bloom, as they now are, our hardest feelings against them are considerably softened.

PANSIES are coming up thick in the beds occupied by pansies last spring. Now, is it advisable to save your stock for winter and spring blooming from these self-sown seedlings? That depends. If you plucked and sold your finest flowers last spring your seed must necessarily have been produced by the remaining poor flowers. And as you sow so shall you reap. The very best seed obtainable is none too good for you, then get it and don't trust to luck.

FORGET-ME-NOTS.—My plants for early blooming are fine large stock, but those for blooming outside next spring are the self-sown seedlings from around last year's plants. They are now being gathered and planted in a cold frame.

CHRYSANTHEMUM MAXIMUM raised from seed imported from two different European seed houses last spring is now in scattering bloom. Both kinds are alike, coarse in growth and weedy in bloom, and totally unlike the splendid flowers we had last July from plants which we bought for the genuine maximum.

FRENCH MARGOLDS are finer in September than during any earlier month.

GLOBE AMARANTHIS increase in fullness and beauty as the summer advances, but September is their heyday.

ROSE MADAME GEORGES BRIANT grows with the vigor of a weed, and as it grows it blooms also, but what a pity, it is covered with mildew. And there isn't a speck of this disease on *Rosa rugosa* itself.

MINA LOBATA is one of the most ungrateful plants we grow. No wonder it had been dropped from cultivation for so many years before its reintroduction. And it will be dropped again.

"**LET ME ALONE**" seems to be the motto of *Lilium speciosum* and *album* as grown with us. Clumps of them in the azalea bed growing up against the bushes and where the ground is also mulched with leaves and litter are 5 to 6 feet high and

many of the stems have had as many as twenty flowers. These clumps have been undisturbed for many years.

CENTAUREA AMERICANA is an annual species from Texas, and although long in cultivation is seldom met with in gardens. It is of tall, erect habit, 4 to 6 feet high, sparingly branched and bears very large—4 to 6 inches across—showy lilac-purple flowers. A variety of it called *Hallii* has deep wine purple flowers. Quite pretty to grow in the garden, but also used as cut flowers. I merely mention it because of the great attention it receives from visitors here, on account of its very large, showy, handsome flowers.

CLEMATIS RECTA—It is in full bloom here about the middle of June and past about the end of the month. As soon as it has done blooming, for tidyness' sake I have the spent flower heads cut off, but do not cut over the rest of the body of the plants till fall as it is quite fresh and green and keeps so till October. By mistake, however, one of the workmen this season instead of cutting off the old flower heads cut the plants down close to the ground. After a little while they started to grow again, and have kept on growing and now are in bloom a second time. But I would disavow such practice as it weakens the plants.

FUNKIA GRANDIFLORA and *Funkia lancifolia* both are in good bloom. The first named is the lovely white flowered day lily so often seen in old gardens and which can be made excellent use of by florists; the *lancifolia* is a lesser, narrow-leaved species with blue flowers, and quite desirable as a garden plant. Both are hardy, long-lived perennials and delight in good ground and a shady place. Florists doing a local business should have lots of this white day lily; they generally have shady places under trees, etc., where carnations or roses won't thrive and which would be just the home for this beautiful late bloomer.

THALICTRUM ADIANTIFOLIUM is a hardy herbaceous perennial with beautifully fine cut foliage like that of a common maiden hair fern, hence its specific name. It is easily raised from seed, easily grown if on well drained soil, and a useful plant for florists. Mr. J. T. Temple, of Davenport, Iowa, is very eulogistic in its favor, he uses it as pot plants in place of maiden hair ferns, and finds that it stands as well, looks as well and gives as much satisfaction as the ferns to his customers.

STACHYS LAXATA is another of Mr. Temple's favorites. It is a hardy herbaceous plant of spreading habit and has thick, woolly leaves. The flowers are of little account. Mr. Temple uses the leaves as an outer border to cheap bouquets and is high in his praise of them for this purpose.

EGOPodium PODAGRARIA POLYVARIATUM.—This is the variegated form of the troublesome great weed or bishop weed of Europe. It is a hardy herbaceous perennial, luxuriating in moist soil and preferring a faintly shaded spot; the variegation is white, well defined and retained the summer through. Although the plant is a pest in Europe this variegated form seldom gets beyond bounds in this country. It is another of Mr. Temple's pets. He uses it for hanging baskets. Grown in this way and well watered he assures me that it makes a splendid growth, retains its leaves well and well and furnishes the baskets or vases more densely than any other plant of the kind he knows. Very easily propagated by division. Hot, sandy land and dry summer weather are killing to it.

MANETIA BICOLOR.—"So you have got the manetia fever too," remarked a gentleman to me here the other day as he saw a little fence covered with it. "No, not quite," I remarked. "I am the author of that fence." It was the dense growth of manetia on that little fence three years ago that suggested its importance to the florist who boomed it." But Mr. Temple of Iowa tells me it doesn't bloom as well in the west as does *M. cordata*. Well, I have cordata too and in fine bloom on a string trellis. With me *cordata* is the prettiest and most copious bloomer of the two after midsummer, but for an all-the-year round bloomer bicolor certainly has the advantage, and bicolor is the thriftiest grower and the easiest to propagate.

VARIEGATED HYPOCYRTE PLANT (*Euphorbia heterophylla* fol. var.)—A kind friend in the south sends me a spray of this plant splendidly variegated with yellow and also with white markings. It came up, an accidental variety among a lot of the typical form, and was boldly variegated from its birth. The plant is vigorous and bearing seed quite freely, and he sent me the seed. Now, after all, the plain *hyocyrt* plant isn't much of an ornament for northern gardens, but this variegated form, if we can hold it, is a decided acquisition, because the variegation is so liberal and so pronounced and permanent from the beginning. To paralyze my friend, L. W. Goodell, of Dwight, Mass., who introduced this plant two years ago, I brought my spray to Boston, but he gave me a set-back when he told me he had the same thing last year. I didn't open any seed, however, and he has only been able to save one plant from it from a cutting, and so far it isn't seeding. This *euphorbia* has been called summer-blooming poinsettia, Mexican fire plant, painted leaf, fire-on-the-mountain and *hyocyrt* plant. But if we are to give priority the precedence I fear we will have to abide by the very homely name *hyocyrt* plant, the name by which it is so commonly known by the people of the far south.

ARISTOLOCHIA GOLDIEANA.—Apropos of my reference to this wonderful flower, page 41, Mr. John Dallas, Fairfield, Conn., writes me: "Aristolochia Goldieana first flowered in Europe in the Botanical Gardens, Glasgow, in 1867. I was then employed in those gardens and this wonderful plant was under my charge. Mr. Peter Clarke was curator of the gardens, and an intimate friend of Mr. Goldie. The flowering of this aristolochia caused quite a furor in botanical and horticultural quarters, and blossoms of it were sent to Kew, and soon afterward it was figured in the Botanical Magazine. I remember Mr. Clarke coming to me one day with a handful of letters which were orders for young plants at five guineas a piece. But this was only one of many rare tropical plants Mr. Clarke received from time to time from his friend Mr. Goldie. One of the most striking of these I remember was a densely yellow powdered gymnomorpha fern with the powder as thick on the upper as on the under side of the fronds."

ECONOMUS RADICANS is a common little hardy evergreen shrubby vine generally used for bell edgings to flower beds and carpeting beds of mixed evergreens. It is also used as a vine to cover low rough-faced stone walls or stumps, and run up the trunks of thin-headed trees in fish fashion. At Wellesley the other day we noticed it planted against the wall supporting the bank as we entered the grounds, also against the terrace walls

in the Italian garden, and Mr. Hunnewell told us that while he liked the *Ampelopsis Veitchii* for high walls he prefers this little cunymus for covering low walls.

Eronymus latifolius is the showiest shrub in fruit just now in our gardens, indeed, when in full fruit and ripe it is the showiest species of the genus.

Eronymus sieboldianus came into bloom about the middle of August and still, September 1, is in good bloom. Its flowers are greenish white but produced in immense profusion. About the middle of November its fruit will begin to ripen and the fruit is far more ornamental than are the blossoms. A peculiar thing about the flowering of this shrub is that the flower buds appear in May but do not open till August.

Tamarix sinensis is now in its loveliest fleecy glory—10 to 12 feet high and a mist of pink spray. It is a hardy shrub, the hardest of the tamarixes, as easily raised from cuttings of the ripe wood as is a willow, and blossoms in August and September while the other species blossoms in May and June. Of little use among cut flowers, but indispensable among shrubs.

Hydrangea paniculata grandiflora.—Those of you who cut your plants hard back last winter, thinned the young growths pretty severely in early spring, and mulched the ground about the plants in summer, now are, I presume, admiring the extra large bunches of flowers that have resulted from this little attention. Don't you think there is more credit to your standing as a florist in these big heads than there would be in a lot of little commonplace ones?

THE LATE *Hydrangea paniculata* is just coming into bloom, many heads are still green; and the *grandiflora* is beginning to tinge. You want this late bloomer, not for cut flowers, but as a shrub in bloom.

Australian Acacias.

On page 18 AM. FLORIST August 15, A. M., Massachusetts, asks information from a brother florist as to the best method of cultivating the Australian acacias and the best species of same.

The Australian species of this genus are both numerous and handsome, producing their flowers of various shades of yellow from January to July, and thus rendering the greenhouse or conservatory attractive during several dull months. They are easily grown into good flowering plants, and should be potted in a mixture of peat and loam in equal parts with a good quantity of sand. When flowering is past they may be placed in the open air, which will greatly benefit them. It is much to be regretted that so few species are to be found in our commercial gardens, as their hardness renders them most desirable plants either for the greenhouse, the decoration of the sitting room or as ornaments for the window of the cottager.

A. argyrophylla is a handsome shrubby species growing to a height of several feet and furnished with oblong silvery silky phyllodes and axillary stalked globular heads of yellow flowers.

A. armata grows from four to six feet in height, the so-called leaves (phyllodia) obliquely ovate, entire, and of a rich dark green color. The flower heads are solitary in the axils and are of a rich golden yellow.

A. cochlearis is a rigid growing glabrous species producing its globular heads of bright yellow fragrant flowers in pairs from the axils of the leaves in January,

these latter linear lanceolate, deep green and terminate in a sharp point.

A. Drummondii is one of the most handsome species of this very extensive genus, forming a dwarfish shrub with pinnate leaves consisting of two pairs of pinnule, having deep green oblong leaflets. The flowers are of pale lemon and borne very freely in cylindrical spikes. It blooms from April to July.

A. Riceana is a particularly handsome and distinct species. It grows to a great height, the branches hanging gracefully like a weeping willow; it makes a handsome plant in a small pot. The phyllodes are linear, dark green and are scattered

FLOWERING BRANCH OF *ACACIA RICEANA*.

or whorled. The flowers are produced in long spikes and are pale yellow in color. These I believe from experience to be a few of the best for cultivation by florists in this country and would well repay a trial.

JOHN HENRY,
Grand Haven, Mich.

Chicago.

The congress of horticultural societies which convened at the Sherman House August 27 in response to a call issued by the Illinois State Hort. Society, to consider matters in connection with the World's Columbian Exposition of 1893, proved to be a gathering of fruit growers, rather than of horticulturists in the broad sense of the term. And as a natural sequence the main consideration of the meeting was for the fruit display.

A meeting was held at the Sherman House September 1 to organize a Horticultural Society for Cook County. The meeting was well attended and much interest was manifested in the project. Several well known amateurs have taken hold with a will and there is every indication that the labors of the promoters will be crowned with the fullest success. A committee was appointed to have the society incorporated, and another committee is considering the matter of by-laws. Another meeting will be held at an early date to perfect the organization and elect officers.

A fine collection of gladioli was sent to the meeting of the horticultural societies by C. H. Allen of Floral Park, to decorate the room, but unfortunately they arrived at the end of the last day.

At the first meeting of the Florist Club after the return of those who had attended the Boston convention, a beautiful and elegantly ornamented leather medal, a foot in diameter, was presented to the members who had participated in the Bowling Match at the Hub. The present high price of leather makes it an extremely valuable souvenir. It will undoubtedly be highly prized, and made use of by the recipients when their shoes need resoling.

Among those interested in the new Hort. Society now in process of organization, is Professor Bastin, the well known botanist. The Professor is much interested in the project of making a wild garden of native plants a feature of the horticultural display at the World's Columbian Exposition. He is also endeavoring to have the park commissioners attach good sized labels to all trees and plants in the public parks, giving the common and botanical names and the habitat. This would certainly greatly enhance the educational value of the parks, and as soon as the organization of the Hort. Society is perfected it will undoubtedly add the weight of its influence to bring about this desirable arrangement.

In an old directory of Chicago, published by W. W. Dusenhower at 233 Lake street, for 1831, is the name of but one florist, Samuel Brooks, located at the corner of Adams and Clark streets. Six years afterwards two others were known to be here—Job Carpenter on West Lake street opposite Union Park, and A. T. Williams on the north side of Fullerton avenue. In 1857 Edgar Sanders was added to the number. The Chicago Directory for 1881 gave 56 names of florists. The directory for 1890, just issued, and which embraces the 175 square miles of territory that the city of Chicago now covers, contains the respectable number of 156 names of firms doing business in Chicago proper. If to this we add from the American Florist Co.'s Directory some twenty outlying towns, and all tributary to this city, we get 64 additional names, making a total of 217 listed names of those in the trade as against "Father Brooks" solitary name in 1851, say 40 years ago.

At South Park the asters have been a total failure this year, and Superintendent Kanst mourns the loss of a very choice strain, which was the result of many years' selection. The single dahlias which have been on trial here for the last two years will be discarded as unsatisfactory. Caterpillars have been unusually plentiful and have done much damage the past summer. The cannas especially have been much disfigured by these pests, and the geraniums have also suffered severely. In the half-mile long bed of geraniums at this park none of the scriptlets can approach the old Gen. Grant in freedom of bloom and general effectiveness, while Waddington is decidedly the best pink. The trusses of bloom on both of these varieties could not be more numerous without completely hiding the foliage. A very effective bed planted this season was one of large, dwarf, richly colored cockscombs, with a border of alternanthera. The aquatics at this park have done remarkably well and have been a very taking feature. During times when the wind blows with sufficient strength to lift the leaves of the victorias they are held in place by laying upon them hoops of heavy wire wound with cotton cloth. For extra heavy wind a coil of old rubber hose, likewise wound with cotton cloth, is used in the same way. The cloth is used to over-

come the tendency of a black object to attract and hold the heat of the sun.

Mr. Wm. McMillan, superintendent of the parks of Buffalo, N. Y., spent a day in the city recently while on his way to Minneapolis. He visited Lincoln and South Parks, and spent a pleasant hour with Superintendent Kanst of the South Park system.

New York to Boston.

The party which traveled from New York to Boston on the magnificent steamer Puritan numbered 193. This included the New York and Philadelphia delegations in addition to a large number from other adjacent cities. It was a most enjoyable trip which will be long and pleasantly remembered. Much of the pleasure of the occasion was due to the untiring efforts and able management of President A. S. Burns of the New York Florist Club. With the assistance of a number of New York florists the large dining room of the steamer had been beautifully decorated for the occasion, and many other details supplied to make the trip a pleasant one. N.

Fall Exhibition of the Springfield Amateur Horticultural Society.

The fall exhibition of this society was held in Union Armory, Springfield, Mass., on September 2 and 3, and was the biggest show of "out of door" grown flowers and plants ever made in the Connecticut valley. There were over 350 exhibitors including those from out of town.

Asters, of course, led in numbers, and most of them were fine. Dahlias were good; dianthus in abundance, good, bad and indifferent; gaillardias, godetias, helianthus in great variety; gloxinias, and some fine ones too. Some fine pansies and petunias. Oceans of phlox and poppies. Some very fine verbenas and zinnias from out of town.

The professionals exhibiting were V. H. Hallock & Son, Queens, N. Y., gladioli and Lilium auratum; A. B. Howard, Belchertown, Mass., verbenas, Phlox Drummondii, marigolds, Lilliput zinnias and petunias. Mr. Howard makes a specialty of petunias and showed some which were nearly entirely marbled, there being only a faint trace of the stripe. Dexter Snow, Chicopee, Mass., hardy phlox, dahlias, geraniums and carnations; J. W. Adams & Co., hardy phlox, although gladioli and Hydrangea grandiflora; C. L. Burr, gladiolius Pres. Carnot with 7-inch flowers, Shirley poppies, zinnias, lilies, roses, pansies, asters and hardy phlox; H. B. Hart, dahlias; H. C. Smith, asters and pansies; Gale Floral Co., cut flowers; F. R. Belden, petunias, asters, gladioli and tuberous begonias; Miller Bros., cut flowers, pots, palms, jardinières and a fine floral ship.

There was a large attendance and everything passed off pleasantly.

ALFRED B. COPELAND.
Springfield, Mass.

OBITUARY.

LEVI B. WELLS, the well known florist of Helena, Montana, died at his home in that city July 23. He was the leading florist in that new state, and for twenty years was one of its most respected and useful citizens. A friend sends us the following sketch of his life:

"Levi Byron Wells was born May 10, 1842 at Mount Morris, Livingston county, New York. He received a fair educa-

tion, and while yet quite young started out from home to do for himself. He first went to Buffalo, N. Y. thence to Ohio, and in 1858 to Michigan where he attended school for a term of years, after which he went to Grand Rapids, where he resided during the war; and on June 14, 1863, he married Miss Laura Gordan the youngest daughter of the late Geo. W. Gordan, one of the pioneers of Grand Rapids. From Grand Rapids he came to Helena, Montana in the year 1869, his wife accompanying him.

During the early days of his residence in the state he was a great explorer, and many of his mineral finds have made others rich, but from which he never received any benefit. During his explorations many rare mountain flowers were plucked and native plants gathered by him which have been cultivated. Mr. Wells was a pioneer of Montana, and his name is familiar all over the state. But few if any were better posted or more familiar with the mountains and valleys of the state than he, and much valuable information has been furnished by him to the government and state.

"His death was caused by a run-away team coming in collision with his carriage containing himself and family while journeying to their nursery located a few miles distant. The collision overturned his carriage throwing him violently to the ground from which he received injuries resulting in his death a few hours later.

"Mr. Wells commenced the construction of a greenhouse in the year 1873 and the cultivation of flowers which by his peculiar fitness and perseverance he has carried to success, his greenhouses to-day being the finest west of Chicago.

"He was a man of naturally refined tastes and had a peculiar love for flowers; he was a botanist and became as intimate with the flora of the state as with the exotics which he cultivated under glass. He was of an exceedingly generous nature and many times the floral tributes which he brought and made less dear the last sad rites, were sent without money and without price to those who were financially unable to purchase. And as a fitting tribute to his generosity and worth he was remembered at his funeral by the rich and poor alike, who strewed the path from the house to the gate, and buried the casket which contained his mortal remains, with the flowers he loved so well.

"An honest, upright, generous and kindly soul has gone to receive its just reward."

Termes Flavipes, Koller.

(The Termite or White Ant)

There is probably no insect more injurious and less generally known at present among florists, than the termite, or white ant. They are fast becoming a nuisance in many localities, and no pest with which I am familiar can be compared to them. As one of the afflicted I have been making them a study for two years and would advise parties buying from infested firms to keep their eyes open.

There are three forms, viz: The winged, workers, and soldiers. The winged form contains the males and females which fly in swarms in spring and fall, and will be seen sticking to the moist glass or running over the floors and benches, seeking convenient nooks in which to start new colonies. The wings are deciduous, net veined, all of equal length and are lost after one or two hours' flight. The body is one-eighth of an inch long, dark brown covered with brown pubescence, the

abdomen is flat, expanse of wings three-fourths of an inch.

The workers are apterous (wingless) and asexual (neuter). These are the ones which do the mischief. They are white with round heads, inconspicuous mandibles and stout soft bodies three-sixteenths of an inch long somewhat resembling true ants (Formica).

The soldiers are larger with pale yellow heads, one-third their own length and well developed mandibles which they use effectually in guarding the workers against enemies.

They tunnel through all sorts of wood-work, rafters, sills, floors and benches and it is impossible to root cuttings in a sandbench infested with them. On entering the bottom of pots they destroy the roots and then hollow out the entire center of the stem or bulb leaving nothing but the shell. Last year I lost nearly all my tulips, many of my amaryllis, roses, cannas, and stove plants, and had to renew many of my benches. In an inch board one by eight feet which to all outward appearance was sound I killed over 8,000.

The quickest way of detecting their presence is by the covered runways they always construct when crossing over iron, stone or brickwork. I find no way of exterminating these pests, but manage to keep them in check somewhat by a weak solution of corrosive sublimate and water for watering, and by saturating the floors and open benches with carbolic oil.

ROBERT M. GREY.

Pittsburgh, Pa.

Cypripedium Caudatum, var. Luntii.

This is a new and grand variety of the well known species, being distinct not only in the size, but the shape of the pouch and the coloring. The dorsal sepal measures 6½ inches in length, while the lower one measures 7½ inches. The petals are extraordinary in size, being 33 inches in length, yellowish and beautifully shaded with reddish brown. The pouch is very large and round, yellow with reddish shading, while there is a yellow margin near the white opening which gives it a great contrast of color and adds greatly to its beauty.

Am happy to name it after William W. Lunt, Esq., of Hingham, Mass., a rising connoisseur of cypripediums and the happy possessor of this grand variety.

W. A. MANDA.

Passiflora Constance Elliott.

In the beginning of the year 1889 I got a plant of Passiflora Constance Elliott and planted it in a box at one end of a greenhouse; the box was 1½x3½ feet.

It bloomed last year about August and not very many blooms, but this year it started to grow in January. The first flower opened March 18 and the last one June 24, and by actual count it had 392 flowers on it, some days as many as 12 at one time. Can anybody beat that? I might add that a strong plant which was planted outside this spring has made plenty of growth but no flowers.

Germantown, Phila. JOS. A. BLUM.

Shipping Plants C. O. D.

We would have you inform us through your paper if there is any way you can compel parties to take goods ordered, when you ship them C. O. D. and they refuse to take on the ground that the goods were shipped C. O. D. and no other reason is given. It is very aggravating

to have parties so sensitive about this C. O. D. business. W. W. GREENE & SON.

[The most satisfactory solution of this question we have ever found is this: If the party is not sufficiently well known to be credited mail him an estimate showing cost of his order and ask for remittance or references or part cash and instructions to collect balance on delivery.—Ed.]

Steam Heating.

I would like to hear the opinion of some of those florists who have used both kinds of boilers, as to which is the best for economy of fuel and labor. The high pressure tubular, such as locomotive etc., or the low pressure regular heating boiler? Both kinds to be run at low pressure. Also which kinds are least liable to get out of order. J. F. S.

M. Victor Lemoine.

Of the group of prominent French horticulteurs of the present time, none is more widely known and respected than Victor Lemoine; born in 1823 the present year finds him 67 years old, hale and hearty and extremely clear headed.

His birthplace was Deline, previously Department of the Moselle, now annexed to the German Empire with Alsace-Lorraine, where his family have been generations of gardeners for the past 700 years, son following father in this honorable calling.

He was employed in some of the most celebrated of the continental nurseries of the time; with Baumann of Bollmiller, Van Houtte of Ghent, Mieliez in Lille, and in 1850 founded for himself an establishment devoted to the cultivation, selection and distribution of novelties in plants and shrubs.

The beginning was difficult, as he had not more than a few thousand francs for capital, but enthusiasm for his work and faith in his final success prevailed over all discouragements. His thorough and practical knowledge of the principles of hybridizing has brought him excellent results in many diverse classes of plants.

In 1852 he produced the first double portulacacs, highly praised in the horticultural journals of that day; 1854 the first double potentilla was obtained by him and sent out under the name of Gloire d' Nancy; 1859 he raised the new hybrid streptocarpus, 1862 the new monochatmus and introduced into Europe *Spiraea callosa alba*; 1864 *Clematis lanuginosa nivea*; 1869 was a remarkable year, witnessing the introduction of the Japanese *Hydrangea paniculata grandiflora*, now unsurpassed among shrubs for popularity, and the production of the double zonal geranium *Gloire de Nancy*, followed by the first doubles with rosy and pink flowers, Marie Lemoine, Mme. Lemoine and others; 1871 he raised the first double tuberous begonias, Lemoinei and Gloire de Nancy, and also the still very popular double white clematis, Lucie Lemoine; 1877 new double ivy leaf geraniums; 1878 the magnificent double lilacs and Lemoine's hybrid gladioli now so widely known; 1882 various montbretias which for some reason never attained much popularity in our country; 1884 *Begonia* smp. gigantea and the introduction of *Begonia* aurea, one of the most beautiful of all variegated plants; 1885 *Heg* smp. elegans; 1887 *Fuchsia* Mrs. E. G. Hill; 1889 *Gladiolus Nancienne*.

The begonia is a great favorite with him and he has now ready to disseminate the magnificent "Lemoine's Triumph."

For next year he has several fine sorts—a fall flowering tuberous rooted white and a pink gigantea.

Besides the above admirable list his improvements are noticeable in abutilons, bouvardias, heliotropes, lantanas, phloxes, weigelas, etc.

He is a fellow of many European horticultural societies, and a corresponding member of our own Massachusetts Hort. Society. He was decorated with the insignia of the Legion of Honor in 1889.

His present establishment at Nancy is devoted almost exclusively to the production of new plants by cross-fertilization and hybridizing. It may not be amiss to remark that the production of novelties is not unaccompanied by work;

VICTOR LEMOINE.

out of four or five thousand seedling fuchsias and twice that number of geraniums he can hope for only a very limited number of improvements, not to exceed three or four to the thousand; hence if what seems a good price is charged it is only right, as these few distinct new sorts must be made to pay for the work on the discarded thousands.

M. Emile Lemoine is the worthy son of a notable father, being a most capable assistant in all the branches of their business.

The writer looks back with great pleasure to the time spent with M. Lemoine at Nancy last summer; their generous hospitality and their eager willingness to learn anything of interest in their establishment will long be remembered among the many kindnesses received at the hands of the European florists. E. G. H.

FLORISTS' HAIL ASSOCIATION OF AMERICA.

J. M. JORDAN, St. Louis, President.
EDWIN LOSSDALE, Philadelphia, Vice-President.
J. C. VAUGHAN, Chicago, Treasurer.
JOHN G. ESSLER, Saddle River, N. J., Secretary.
J. D. CARMODY, Evansville, Ind., J. C. VAUGHAN, Chicago, Ill., JAMES HURAN, Bridgeport, Conn., B. F. DORRANCE, Wilkes-Barre, Pa., EDWIN LOSSDALE, Philadelphia, Pa., J. M. JORDAN, St. Louis, Mo., and JULIUS ROBBINS, Charlton Hill, N. J., Directors.

SECRETARY'S REPORT.

On the 15th day of August, 1890, the Florists' Hail Association consisted of 359 members who insured 963,307 feet of single thick glass, and 1,168,816 feet of double thick glass, making a total of 2,132,123 square feet of double thick glass. The total assessments collected upon the same has been \$1,524.59, and the total membership fee \$1,322.46. The amount of guarantee fund allowed the subscribers this year has been \$11.25. The amount of reserved fund now on hand after deducting the amounts allowed subscribers to the guarantee fund is \$1,235.96, and the amount of the assessment fund on hand after paying all losses

and expenses from June 1st, 1887, to August 1st, 1890, is \$1,235.96. No assessment has yet been levied. The glass now insured is located in 24 States and Winnipeg, Manitoba. The losses paid during the year have been to F. S. Krebs, Philadelphia, \$67.95 for 1,341 square feet of single thick glass; to Newby & Co. of Logansport, Ind., \$15.12 for 108 square feet of double thick glass, upon which they held double insurance; to the Kemble Floral & Seed Company of Oklaosloos, Iowa, \$7.95 for 159 square feet of double thick glass; to C. C. Lincoln, Nebraska, \$4.95 for 545 feet of single thick glass and upon which he held an extra one-half insurance; to D. M. Briggs of Avoca, Iowa, \$4.95 for 3 square feet of single thick glass; to Joseph W. Losey of LaCrosse, Wis., \$3.95 for 580 square feet of single thick glass; to John A. Salzer, Sert Co. of LaCrosse, Iowa, \$1.89 for 1,501 square feet of single thick glass. Not having all the glass insured they received a pro rata payment of loss. To August 1st, 1890, the Florists' Hail Association insured 3,354 square feet of single thick glass, Messrs. Juengel also received pro rata payment.

Hail storms have been prolific, and so far as your Secretary has been able to learn, hail has fallen in Philadelphia, Oswego, N. Y., Denison, Texas, Albany, N. Y., Eastern Maryland, Jetersville, Ind., Cairo, Ill., Culterville, Ill., Tuckahee, N. Y., Nyack, N. Y., Red Bank, N. J., Keyport, N. J., La Harpe, Ill., Columbus, Cleveland, Ohio, Middletown, N. Y., Paterson, N. J., New Haven, Conn., Harrisburg, Pa., Kimsview, Mo., Baltimore, Md., Memphis, Tenn., Bradford, Ill., Grand Isle, Louisiana, Lincoln, Nebraska, Oklaosloos, Iowa, Congress, Ohio, Kearsburg, Ohio, Upper Sandusky, Ohio, Quincy, Ill., La Crosse, Wis., Highgate, N. Y., Buffalo, N. Y., Kingston, N. Y., Avoca, Iowa, Anderson, Indiana, Manchester, Pa., St. Louis, Mo., Beardstown, Ill., Frederick, Md., Okonoko, Indiana, Juniata Valley, Pa., Sea Isle City, N. J., Trenton, N. J., Doylestown, Pa., Shelby, N. C., Wheatland, North Dakota, Castleton, North Dakota, Windom, Minn., Fountain City, Minn., Sioux Falls, South Dakota, Pottsville, Pa., and Norristown, Pa. Believers in hail belt can take their choice as to its location.

The amendments adopted last year authorizing extra one-half and whole assessments have been used cautiously by members. An extra one-half assessment has been paid upon 18,250 square feet of single thick glass, and upon 47,000 square feet of double thick glass. An extra whole assessment has been paid upon 22,330 square feet of single thick glass, and upon 10,075 square feet of double thick glass. This plan has worked as smoothly as the original method, and members desiring plant insurance cannot do better than avail themselves of the opportunity offered by these amendments. The losses for the year 1888 were 1 square foot of single thick and every 410 feet of double thick glass insured, and 1 square foot for every 978 feet insured. For 1889, 1 square foot of single thick for every 310 feet insured, and 1 square foot of double thick for every 300 square feet insured. For 1890, 1 square foot of single thick for every 98 feet insured, and 1 square foot of double thick for every 10,822 feet insured. The cause of this inequality of percentages for 1890 being that hail storms carefully adopted members having double thick glass. Your Secretary has every reason to believe an assessment will be met promptly by members, and judging from the number of inquiries received the indications are that the membership will be largely increased during the ensuing year. J. G. ESSLER, Secretary.

THE AMERICAN FLORIST CO., Chicago.

AN ADVANCE SHEET, giving list of premiums to be competed for at the annual spring exhibition and bulb show of the Pennsylvania Hort. Society has been received. The exhibition will be held March 17 to 20 next. Copies of the schedule may be had on application to the secretary of the society, Mr. D. D. L. Farson, Horticultural Hall, Broad street, Philadelphia, Pa.

DAHLIA "RED VELVET."—Mr. D. S. Helfron, Washington Heights, Ill., has sent us a bunch of dahlias, among which are blooms of a seedling raised by him, and which he has named "Red Velvet." The blooms are of medium size and full double. The color is a deep, rich red, as will be readily imagined from the name. He states that the flowers are remarkably persistent with him.

THE Whilldin Pottery Co., of Philadelphia, send us a sample of their Excelsior flower pot. The bottom is made so as to provide for abundant drainage and ventilation. The improvement is very accurately shown by the engraving in their advertisement which appears on another page.

B. H. L.—Any florist is eligible to membership in the S. A. F. Make application to Secretary Stewart remitting \$3, which will pay your dues for the current year. This will entitle you to the printed report of the Boston convention.

FROST.—In the latitude of Chicago a frost sufficient to injure colous and similar tender plants may be looked for at any time from this date on.

MAKE ARRANGEMENTS now to keep an accurate record of the blooms cut from your roses and carnations during the coming season.

Catalogues Received.

L. Green & Son, Perry, O., nursery stock; E. H. Krelage & Son, Haarlem, Holland, Dutch bulbs; C. Hennecke & Co., Milwaukee, Wis., wire work; Haage & Schmidt, Erfurt, Germany, bulbs; The Storrs & Harrison Co., Painesville, O., plants, bulbs and nursery stock; P. A. Miller, San Francisco, Cal., tree, shrub and flower seeds; Hartman Mfg Co., Beaver Falls, Pa., steel picket tree and flower guards; Michel Plant and Seed Co., St. Louis, Mo., plant and bulbs; C. H. Allen, Floral Park, N. Y., gladioli, lilies and other bulbs; Alex. Dickson & Sons, Belfast, Ireland, bulbs; Siebrecht & Wadley, New Rochelle, N. Y., palms, ferns, orchids, etc.; J. C. Vaughan, Chicago, trade list bulbs, plants and florists' supplies.

Cut Flower Orders.

I would like to call your attention to one of the evils of the cut flower trade.

I send an order to A for cut flowers to be shipped at a certain time with instructions to answer at once if he can not fill order. I go to the train the next morning and do not get any flowers. I had all the flowers sold to various parties, and I not only lose the profits on the orders, but I also lose the customers. Who should stand the loss?

I occasionally send a telegram like the above to parties and receive a half supply. Who should stand the loss?

Why should not the retailers combine as the wholesalers do and when they make a mistake make them stand it?

I would like to have the question thoroughly canvassed so that I may know if I am justified in taking redress when such a thing happens. T. R. R. & Co.

[It seems to us Mr. R. states here only one side of the question. We print his query and when we hear the other side we can answer better; meanwhile if Mr. R. had actually sold the flowers why not ask a positive acceptance from the commission man?—Ed.]

News Notes.

ST. JOSEPH, MO.—A project is on foot to organize a horticultural society in this county.

WHEELING, W. VA.—The floral display at the recent State fair was unusually elaborate.

LUBINGTON, MICH.—William Gregory is building two new houses, each 95 feet long, and expects soon to add a seed department.

UTICA, N. Y.—The Florists' Club has appointed a committee to arrange for a show of chrysanthemums and other flowers in November.

LOUISVILLE, KY.—Willie Nanz, son of C. G. Nanz, the florist, died August 12. Mr. Nanz has the sympathy of his brother florists here in his affliction.

OSWEGO, N. Y.—At the Oswego Fair excellent displays of plants and flowers were made by Messrs. Cook, Northrup, Stewart, Beckstead and Mattoon.

NEW BRITAIN, CONN.—The recent flower show given by the Horticultural Club was very successful, the display being one of the best yet made by this organization.

KANSAS CITY, MO.—Albert F. Barbe has purchased a tract of land on Fifteenth street near Elmwood Cemetery, on which he intends to build greenhouses early next spring.

OIL CITY, PA.—The Society of Northwestern Pennsylvania Florists has been organized with headquarters in this city. P. S. Ingham is president and H. B. Beatty is secretary.

SIOUX FALLS, S. DAK.—J. J. Schumacher lost all his glass by hail August 3. Luckily he was insured in the Florists' Hail Association of America, which promptly paid the loss.

BOSTON.—Miss Flora Wax, daughter of a florist in this city has just obtained the first prize and medal at the Vienna Conservatory, and has already entered upon her career as an opera singer.

NEW YORK.—Alexander McConnell has discontinued the business at 729 Sixth avenue and will continue the same at 546

Fifth avenue, corner of 45th street, a branch established two years since.

DETROIT.—The dates for the chrysanthemum show to be given by the florists of this city have been changed to November 11 to 14 inclusive, one week later than the time previously announced.

LEXINGTON, KY.—Florists W. S. Bell and Mrs. D. Honaker made excellent displays of plants, flowers and floral arrangements at the recent fair. Mr. Bell received \$199 in premiums, and Mrs. Honaker \$50.

LOUISVILLE, KY.—Florists of this city are arranging to hold a chrysanthemum show in November in connection with a musical festival. All the charities of the city will be asked to take part, and the net proceeds will be divided among them. The affair will be under the auspices of the Louisville League.

GRAND RAPIDS, MICH.—F. A. Chapman has purchased land at the corner of Hall and S. Union streets upon which he will build greenhouses. The new place will be conducted as a branch. It will be under the charge of Mr. Chas. Bowditch, a nephew of Mr. Chapman, who has a partnership interest. The old greenhouses and store on Madison avenue will be conducted as usual.

KANSAS CITY, MO.—The Missouri and Kansas Inter-State Fair will be held in this city September 22 to 27. In the floral department premiums are offered as follows: Best and largest collection named varieties greenhouse, hot-house and bedding plants, by one professional exhibitor, \$50, \$25; Best floral design, \$5, \$2.50; Best and largest collection named varieties greenhouse, hot-house and bedding plants, in pots, by amateur, \$20, \$10; Best floral design, by amateur, \$5, \$2.50.

Coming Exhibitions.

October 28-Nov. 1, Atlanta, Ga.—Chrysanthemum show, Piedmont Exposition Co.

November 4-6, Orange, N. J.—Chrysanthemum show, New Jersey Floricultural Society.

November 4-6, London, Ont.—Chrysanthemum show, Forest City Florists' and Gardeners' Society.

November 4-7, Chicago.—Chrysanthemum show, Chicago Florist Club.

November 4-7, Erie, Pa.—Chrysanthemum show, Erie Chrysanthemum Club.

November 5-6, Providence, R. I.—Chrysanthemum show, Rhode Island Hort. Society.

November 10-14, Philadelphia.—Chrysanthemum show, Penna. Hort. Society.

November 11-13, Boston.—Chrysanthemum show, Mass. Hort. Society.

November 11-13, Montreal, Canada.—Fall show Montreal Gardeners' and Florists' Club.

November 11-14, Detroit, Mich.—Chrysanthemum show, Detroit Florists.

November 11-15, Cincinnati.—Chrysanthemum show, Cincinnati Florist Club.

November 11-15, Indianapolis.—Chrysanthemum show, Society of Indiana Florists.

November 12-13, Worcester, Mass.—Chrysanthemum show, Worcester County Hort. Society.

November 12-14, Hartford, Conn.—Chrysanthemum show, Hartford County Hort. Society.

November 20—, New York.—Exhibition New York Florist Club.

November — — —, Baltimore.—Fall exhibition Gardeners' Club.

Every Florist, Nurseryman and

Seedsman should have one.

AMERICAN FLORIST CO., Chicago.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN POTTER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

ROBERT LIVINGSTON says that Samuel Wilson's woods is the best place in which to write up catalogue matter.

The New York *Tribune* of August 27 reports A. C. Nellis in legal difficulties, charged with misapplying funds of the A. C. Nellis Co.

Mr. K. RAOUX of New York, the well known import agent, reports his intention to give up the business. He says: "I believe Congress will succeed in bringing upon us the worst financial and commercial crisis we have had in a long time, and I want to stand firm under."

A Regal Realization.

This is the way Mr. Burpee's seed firm appeared to the *Dorchester Intelligencer*. Was the organ of vision stimulated through any of the other senses? "Causing one to succumb by sublimity of regal realization," sounds more than flowery—great indeed is Fordhook!

"We are firm believers in the seemingly simple saying: 'Enough is enough, and too much is plenty,' but its truthfulness never impressed itself as powerfully as just here and now. We confess it—give it up—acknowledge the corn, and admit it on floral magnitude and magnificence. There are limits of space we may not bound over, and therefore it is that while loth to submit it to such brief review, we may only add to the long lines in their endless variety of tint crowning with beauty the high hills, facing westward, and stretched out to the frontier clear on to Vauxville, where the first faint glimmer of the morning sun gleams daintily touch this Alhambra of flowers in endless profusion, and where its gleams over departing day-time love to longest linger, as if unwilling to part from such a scene superb, it is away beyond our power to picture or proclaim. We look it over until its flashes of crimson fire, its perfection of perfume just results incensing one to succumb. We give it up, because it is away beyond our ability. Go gaze on it for yourself, love in it, thrill over it, fill your very soul with it, until, like us, you become color-blind, and even then you may indulge in only the conception, but not its sublimity of regal realization."

Contemptible Ignorance.

"What a beautiful odontoglossum!"
"That isn't an odontoglossum—what you call it! That's an *orkid*."

GLEDITSCHIA TRIACANTHOS.

(THREE-THORNED ACACIA.)

To off: **4 TONS** of first quality seeds,
—CROP 1890,—

At \$240 per Ton, or \$28 per 200 weight,
—TAKEN AT HAVRE—

For all other Horticultural French Seeds, quotations on Plants, Fruit stocks, you may need from LETELLIER & SON, of Caen, Calvados, France, address, as soon as possible to

BOXES. BOXES. MAILING AND CUT FLOWER BOXES.

Read what C. A. Reeser says for our 3-PIECE BOX:

GENTLEMEN—I write to tell how well pleased I have been with the mailing boxes you have furnished me during the past two years. I think I have ordered 50 or 60 thousand, thus giving them an extensive trial. I think there is nothing in the market that is so satisfactory, at least that has been my experience, and I have tested nearly, if not quite all the boxes in the market for that purpose.

Yours very truly, **C. A. REESER, JR.**
Send for price list, free. Sample nest 15c.

M. A. HUNT,
TERRE HAUTE, IND.

Wintering Tender Aquatics.

In response to an enquiry we have secured the following from Mr. Benj. Grey: "The nymphæans and nelmubiums all winter best if the water is poured off and the roots allowed to remain in the soil where grown; the soil to be kept damp, and the pots or tubs to be placed in a greenhouse or cellar where a temperature of about 50° or more can be maintained; for southern sections of the country if the plants have been grown in basins or tanks outside, or even tubs in the ground, they may be covered with litter and boards and left where they have grown. For sections where there is little or no frost the plants if well established should winter without any special protection; this applies to the tropical sorts."

— ORIGINAL AND LARGEST GROWERS OF —

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

— BULBS NOW READY FOR DELIVERY. —

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing."

The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine *Liliium Harrisii*. In order to secure "the true variety," purchase our Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. longifolium* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working moulds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN**. We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS:

First. We will put up \$1,000 in Cash and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up \$2,000 in Cash and produce 500 pots of each size from 1½-inch to 7-inch inclusive, and 250 pots each from 8 inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

A. T. CEFREY'S

Patent Improved
Florists'

Immortelle Letter and
Pin Fastener.

CEFREY LETTER CO.,

GENTLEMEN—I find the new machine-made Immortelle Letters manufactured by you very salable and in many respects superior to anything of the kind we have ever handled. Their uniformity of shape, size and color, the convenient form in which they are put up, and the excellent device for fastening them to the work, are among the most commendable points in your letters. Please double my last order and deliver as soon as possible. Yours truly,

W. J. STEWART.

CEFREY LETTER CO., 13 Green St., Boston.

DEAR SIRS—Please ship me five thousand letters as soon as possible. They are the best and most practical letters in the market. The pin fasteners are a long way ahead of the old fashioned way of wiring. Yours truly,

N. F. MCCARTHY.

CEFREY LETTER CO., Boston, Mass.

DEAR SIRS—Send at once ten thousand small letters and five hundred large (two inch)

GALVIN BROS., Boston.

We wish to announce to all florists that we have removed to much larger quarters, **No. 13 GREEN STREET, BOSTON.**

We make our letters by machinery; they are not only more perfect in size, shape and color, but are the best and cheapest in the market. Our 2-inch letters are only two and a half cents, and the 1½-inch letters are only two cents apiece. Your customers will have no others. Be up with the times! Send us your orders and we will ship you a supply for this winter. **They are the best in the market.**

THE CEFREY LETTER CO., 13 Green Street, BOSTON, MASS.

Palms in New Orleans.

Mr. J. Fonta writes: "Twenty-five years ago palms were not cultivated at all in New Orleans, but they are now the most ornamental plants of our gardens and lawns. Some eighteen or twenty species and varieties of this class of plants are growing to advantage in this climate with a very little protection during the winter, and this is needed only when the plants are young and tender."

A Weed Killer.

A newspaper clipping advertising "The celebrated Mexican bugs, which are warranted to clear a garden of weeds in a week's time, and not touch any vegetable except red pepper," is sent us by Mr. Ellis Stephenson, a florist of Burnside, Ky., who adds:

"I enclose an article cut from the *Frankfort Roundabout*, Frankfort, Ky. I would like to see the 'critters,' but don't expect to invest in them, preferring to use industry and a sharp hoe instead."

How any newspaper man with any common sense whatever can express belief in any such absurdity is one of those deep, dark mysteries which will probably never be revealed. We should like to get hold of an insect which would kill off all the fool-editors. If we could we would turn some active specimens loose in the vicinity of Frankfort.

PLEASE BEAR in mind that anonymous communications go direct to the waste basket. An article may be signed by an initial or pseudonym, but it must be accompanied by the author's real name and his address for our own information, in order to receive any attention from us.

WE SHALL publish in an early issue some very interesting records of blooms cut from various sorts of roses. Make arrangements now to keep a record of your clip during the coming season to assist in solving the problem of cost of production.

WE HAVE in type a number of very interesting articles which have been crowded out of this issue through pressure on our columns. They will appear in our next number.

AS WE go to press the weather is cold enough in Chicago to be a forcible warning to florists to hurry under cover any tender stuff not yet in.

THE PRESENT cold weather in the vicinity of Chicago will probably finish up the outdoor flowers.

Beautiful Wellesley.

Mr. H. H. Hunnewell's gardens at Wellesley, near Boston, are regarded as the most beautiful and complete in the country, and in them all branches of horticulture and floriculture are well represented.

The ornamental grounds are very extensive and consist of broad unbroken lawns, groups, belts and extensive plantations of trees and shrubs, an "Italian garden," regular flower garden, rockeries, aquatic garden, vegetable and fruit gardens, and extensive ranges of fruit forcing greenhouses and spacious glass houses for the cultivation of all manner of decorative plants. And the gardens in their every detail are cared for by Mr. F. L. Harris in the most masterly style, and supported by their proprietor in the most munificent manner. They are the Mecca of every gardener and florist in the country.

The conservatories attached to the mansion house consist of a large glass structure for palms, ferns, cycads, screw pines and other tall spreading plants; and two corners of it are partitioned off for orchids in bloom. On the balcony outside and under a canvas covering were massed all the gayest treasures of the greenhouses, and this show is maintained all summer long. Lilies, begonias, fuchsias, hydrangeas, acimenes and the like added to the display.

Some distance from the mansion house and near the vegetable gardens we find a village of greenhouses—houses filled with all manner of plants. There were orchid houses, stove plant houses, cool houses, flowering plant houses, and houses for Australian plants. And also ranges of houses devoted to grape vines, peaches, nectarines, plums, figs, grapes and other fruits. And one of the most striking features of the place was the outdoor tank of tropical aquatics.

The "Italian Garden" occupies a steep high embankment grading abruptly from the main gardens down to the Waban lake. It is arranged in a series of grass-clad terraces on which are planted a multitude of formally clipped and trained deciduous and evergreen trees and shrubs. It is well illustrated in the right hand corner figure of the heading on the front page of the FLORIST, and it is the only systematic effort at Italian or Topiary gardening in the country. Among the evergreens clipped into many forms are hemlock and Norway spruces, white pine and retinosporas and junipers of sort. Deciduous trees were represented by European larch, American and European beeches, box elder, European lindens and Norway maples. On pedestals along the terrace at the top of the embankment, Irish yews, agaves and other vase plants were arranged. We enter one end of this garden from a sloping grade of the pinetum, and at the other end pass by masses of kalmias and azaleas and rhododendrons to the rock garden through which we ascend by rustic steps and pathways to the plateau above.

The Pinetum, or more properly the garden of coniferous trees, extends from the entrance gate along to the right till we reach the lake. The lay of the land is rolling and the soil gravelly, but the trees are beautiful examples of health, happiness and attentive care. Most every obtainable species of pine, fir, spruce, juniper, arbutus, retinospora and the like, hardy in Massachusetts, are here represented, and judging from the unusually large specimens of many rare trees, they must have found a resting place at Wellesley as soon as they were first introduced. Conspicuous among the handsomest were *Picea pungens*, *P. Englemanni*, *P. polita*, *P. Orientalis*, *P. Ajacensis*, and some fine blue forms of *P. alba*; *Abies Nordmanniana*, *A. Cilicica*, *A. Cephalonica*, *A. brachyphylla*, several forms of *A. concolor* labelled *Parsonii*, *Lowiana* and *lasiocarpa*, *A. Veitchii*, etc.

A splendid specimen of *Pseudotsuga Kempteri* stands near Mr. Hunnewell's residence, in the vicinity of which are also many handsome deciduous trees as beeches, magnolias, weeping elms, etc. And Mr. H. showed us an oak tree on his lawn which was the only tree on his place in 1852 when he began planting there. The collection of Japanese maples in this garden is not only one of the most complete anywhere, but the individual plants are among the largest in the country.

Here we find the largest collection of rhododendrons in America, and the same of Ghent azaleas. The rhododendrons are divided into three groups, namely, perfectly hardy or those that are planted out permanently; half-hardy, or those that are planted out of doors in summer and lifted and brought inside to sheds and cellars over winter; and greenhouse or tender rhododendrons of which *Javanicum*, *Princess Royal*, *Taylori*, *Edgeworthii* and *Princess Alice* are good examples. The hardy rhododendrons are massed into large groups and belts and hanks in several parts of the grounds and associated with other trees, usually forming a foreground for taller subjects.

Some years ago Mr. Harris named for me the following list of rhododendrons as being perfectly hardy at Wellesley, namely, *Album elegans*, *Alexander Dancer*, *Candidum*, *Charles Dickens*, *Delicatissimum*, *Everestianum*, *H. H. Hunnewell*, *H. W. Sargent*, *John's purple*, *Lord John Russell*, *Mrs. Lee Clutton*, *Mrs. Milner* and *Purpureum elegans*. And this is a very reliable list. But by further experiment Mr. Hunnewell has found that many other varieties before now looked upon as only half hardy have proven equally hardy in his grounds. Among these he names *Caractacus*, *Charles Bagley*, *Giganteum*, *Guido*, *James Bateman*, *Lady Arundel*.

strong, Lady Clermont, Kettledrum, Maximum, Wellesleyanum, Minnie, Scipio and Sherwoodianum.

During the visit of the Florists' Convention to Wellesley Mr. Hunnewell himself most kindly piloted us around his magnificent grounds, and those of us who were immediately along with him will ever remember how warmly he advocated the cause of the hardy rhododendron and pointed out to us with pride the happy examples of the cultivation of this noble flowering evergreen upon his estate. The not uncommon impression that the rhododendron is a tender shrub needing a south-facing exposure and sunny situation is erroneous and its practice injurious. In such a situation the soil is apt to become hot and dry in summer, just the conditions most unfavorable to the well-being of the rhododendrons which prefer a cool, moist soil. And in proof of this he showed us masses of rhododendrons growing in the coldest and most windswept portions of his grounds and which were in the most luxuriant health. In order to maintain the soil moist and cool about the roots all summer he has the ground about the plants heavily mulched with forest tree leaves held in place by a scattering of pine needles over them. And every few years deep ditches are cut and filled in again between the rhododendron beds and neighboring grass-feeding trees, so as to cut away the encroaching roots of the trees.

The half hardy rhododendrons are the more tender forms of a progeny (hybrids, crosses and varieties) obtained from *R. Catawbiense* and *Ponticum* hybridized with *R. arboreum*, a scarlet-flowering Himalayan species. They were represented in the form of bushes, standards and half standards, and occupied mostly places in the vicinity of the hedges and tent ground. Before last winter they were in the best of health and the roots and stems were filled with sap and life, but their roots and transferred to immense cellar buildings constructed in the margin of the woods behind the barn. Here they are stored close together and allowed to remain till the following April when they are retransferred to their summer quarters to bloom and grow. Of course this treatment is very enervating, at the same time the plants bear up under it splendidly and contribute nobly to the grand display of rhododendrons for which Wellesley is world renowned. Among these half hardy varieties are *C. S. Sargent*, *Duchess of Edinburgh*, *Duchess of Sutherland*, *F. D. Godman*, *Helen Waterer*, *J. Marshall Brooks*, *J. McIntosh*, *Joseph Whitworth*, *Lady Grey Egerton*, *Marchioness of Lansdowne*, *Meteor*, *Mrs. Arthur Hunnewell*, *Mrs. John Clutton*, *Mrs. Shuttleworth*, *Purity*, *Ralph Saunders*, *Rosabel*, *Stella*, *The Queen* and *William Austin*.

The hardy azaleas include the multitude of Ghent varieties, also mollis in its many forms, and our native species as *A. nudiflorum*, *scabellulacium*, *arbutum* and *variegatum*. They all occupy permanent positions, mostly in the vicinity of where the dining tables had been placed. They too had been mulched and cared for much in the same way as the hardy evergreen rhododendrons.

In addition to the hardy azaleas a large assortment of Indian (or greenhouse) azaleas are grown, some for conservatory decoration and others to be retarded till rhododendron time when they help form their grand display. *Decora*, *Exquisite*, *Daphne*, *Creterion*, *Bride of Abydos*, *Variegata*, *Flower-of-the-Day*, *Marquis de Lorne* and *Beatrice* of *L'Etoile* are among those retarded till May.

The multitude of yews, hollies, huncles

and the like evergreens that are not hardy but which were so freely planted about in the grounds are wintered in cellars and set outside in summer, just as described in the case of half hardy rhododendrons.

W. F.

Cælogyne Cristata for Cut Flowers

As it is an open question with some concerning the commercial value of orchids as cut flowers; some facts pertaining to *Cælogyne cristata* may be of interest as bearing upon this question.

No orchid is of more easy cultivation than this one, and when given the proper treatment, its flowers are produced in great abundance, and as evidence of this, mention is made of a few cælogynes, grown for the purpose of selling the flowers.

Nearly four years ago four plants of *Cælogyne cristata* were purchased. These plants were in 8-inch pans, and as they have grown rapidly, they have been twice divided; and now the four plants have multiplied into twenty-five—some in 10-inch pans and some in 12-inch.

The last division was effected this spring after the plants were through flowering. At the time of this last flowering the plants numbered twelve, and from these twelve plants were cut 100 flowers. *Cælogyne* flowers at wholesale would not be valued at less than \$5 per 100. And often they sell for much higher figures than this. Estimating the flowers then at this low value we have here a return of \$75 produced from a bench space of about 24 square feet. It would be difficult to furnish examples of a more remunerative crop.

The flowers are of a very desirable nature for a florist. They can be used for wedding bouquets, funeral pieces, loose flowers, or in any way that a florist requires. As they can be cut with a moderate stem they can be readily arranged into corsage bouquets. In common with most orchid flowers, cælogynes can be kept for a long time if care is taken to prevent dampness from settling upon the petals. There is some variation in the forms of the flower, and it is advisable for any one about to purchase this orchid to endeavor to procure the variety that produces the largest flowers.

The plants are easily grown, and it is a wonder that any one avoids their cultivation from doubt of the ability to succeed. They can be readily grown in an ordinary greenhouse, where a variety of other plants are, and it is a mistake to suppose that it is necessary to remove them from place to place in the greenhouses, for we have had the best success by leaving them upon the same bench all the year round. The only time that it is advisable to do so, is, when there is the object of retarding the blooming period. This can be prolonged by placing some in a cooler house, supposing that the plants have been kept in a medium temperature.

The flowering period generally commences about the beginning of February, and by allowing the plants to flower in batches, some can be kept until the beginning of April.

Cælogynes may be had in flower for Christmas. But an inexperienced cultivator would not be able to succeed in this particular. A novice would do bet-

ter to allow the flowers to appear at the natural period. We cannot take plants that flowered one season in March and then expect that by forcing we can have them the next season at Christmas. To attempt to do so hasten them would very likely result in failure of crop. The only way to gain this end is to hasten the blooming period by degrees. With attention as to temperature, plants that commenced to flower on the 1st of March one year, can be had in flower at the 15th of February of the next year. Thus by this gradual hastening of the blooming period, cælogynes may be induced to open their flowers by Christmas, and, of course, when this is so, their commercial value is proportionately increased.

When it is thought best to retard the blooming period, so that these flowers may be of use at Easter, care must be observed as to the time the plants are placed in cool temperature. A mistake will be made if this is done before the flower buds are well developed. The writer learned this by experience, for placing some plants in a cool house—in order that the flowers might be used at Easter—before the flower buds were well advanced, he discovered too late that a check was given to development, from which they did not recover, and no flowers were the result. When the buds are formed no harm is done by a lowering of temperature.

Cælogynes do well in pans—filled two-thirds with drainage. Turfy loam with the soil all shaken out is the best material in which to pot them. A little charcoal mixed with the soil is an advantage. Let the potting material be elevated considerably above the rim of the pan, making a mound of it. Separate the pseudo-bulbs—if matted together—leaving them in pieces of two and three together, and place them all over the material in the pan. A little sphagnum placed on top of the fibrous material upon which the bulbs may rest is an advantage. These can be retained in their places by staples of wire.

After potting let them be kept moderately warm, well-watered, and shaded from the sun. As growth develops plenty of water is required, and during the hot days of summer syringing twice each day will be beneficial to them.

After growth has ceased but little shade will be required. But they should never be kept dry until the flower buds are well advanced, and even then, water must not be too much withheld.

There is no reason but lack of knowledge why cælogynes should not become a staple flower. Those florists who succeed with *Cælogyne cristata* insigne, and find that in cultivation pays, can also grow this orchid with success, and receive convincing proof that it remunerates the grower for his labor. The plants are not expensive to purchase. And as they can be increased so rapidly, a paying stock can soon be had. To those florists who retail their own flowers this orchid is especially desirable. As we must have variety in the stock of cut flowers, and also a very easy plant in cultivation, and so easily grown as *Cælogyne cristata*, deserves their special mention.

Albany, N. Y. ALFRED E. WHITTELL.

Phalenopsis Amabilis.

This species is the most useful and satisfactory of a very popular genus. It was introduced from the Philippines nearly half a century ago, but for many years it was a very rare plant in cultivation, and also a very difficult one to grow, owing to the absurd ideas of culturists of those days that this plant as well as other so-called air plants needed special houses to

CŒLOGYNE CRISTATA.

grow them; and also gave them special treatment by treating them to a slow death in hot, steamy houses.

For many years it was a rare sight to see a well grown plant of this species, or even one in bloom. But now larger importations and more rational treatment has rendered this orchid one of the popular kinds for florists to grow for cut flowers. It produces its large chaste flowers plentifully on long arching spikes; these are often branched and continue to

grow and produce new flowers from the apex for many months. The individual flowers last about five to six weeks in a moderate and dry atmosphere. A good plan is to cut the spike as soon as the flowers have reached perfection, to within six or eight inches of the base, and if the plant be strong it will shortly throw side branches—and often a new spike from the base.

P. amabilis grows equally well in pots, pans, and cylinders or baskets of clay or

wood; pans or baskets are best because more easily handled and can be hung up so as to allow other plants to be grown underneath. Whatever may be used should be well drained. The compost may consist of good fibrous peat and sphagnum moss (I have mixed nodule of dry cow manure with good results). It is advisable not to use too much potting material as it is liable to get sour on account of the quantity of water these plants need.

The growing season starts about April and from this time until October, advantage should be taken of all fine weather to encourage vigorous growth by giving abundance of heat and water and above all plenty of air at all times. Only sufficient shade should be given to keep the plants from burning, 60° to 62° is a good temperature for the winter months, but care should be taken that the plants do not get too wet.

Slingerlands, N. Y. F. GOLDRING.

Seasonable Notes.

Now that it may be considered that the season has begun for forcing roses for their bloom, it will be well to get everything in proper running order as soon as possible. All early planted roses should be tied up as soon as possible to enable air and light to have free access to all plants alike. Keep all dead leaves picked off and weeds pulled up. Should cloudy weather prevail very little water will be needed at present as the roots will not have fully occupied the soil yet; and till fires have to be kept burning regularly every night it is advisable to water rather sparingly except in very bright weather. Give all the air possible, starting as soon as the sun gets fairly on the glass, giving only very little at first but gradually increasing it as the temperature rises; by giving air early in the morning say as soon as the thermometer shows a rise of three or four degrees over the night temperature and increasing as above it will do no harm if it runs up to 80° during the middle of the day, providing of course there is abundance of ventilation on at same time. Equal care should be taken in reducing the air and avoiding cold draughts as much as possible at any time. Do not let the temperature (without fires) fall below 60° at night if possible; rather than allow it to do so it's much better to put enough fire heat in to take the raw damp air off.

Where the plants are growing freely and have no mulching yet, a light dressing could now be put on with advantage to them, but at this season a heavy mulching is not desirable, in fact, often does more harm than good as it is very apt to keep the soil a little too damp, besides it prevents the roots from getting the desired amount of air. Should mildew show itself lose no time in applying sulphur as previously directed, but as soon as the nights get cool enough to warrant making the pipes at all hot, then sulphur mixed up like a thick paint either with linsed oil, water or water and skim milk and applied to the pipes while they are hot will effectually destroy mildew and if left on the pipes will help materially to keep red spider in check.

JOHN N. MAY.

Solid Beds Versus Benches.

Your correspondent Mr. Grant J. Maple (page 63) and many others are in doubt as to the best method of the two for forcing roses, and I am I think laboring under a slightly mistaken idea about it. There are certain classes of soil and other

conditions also which make it more desirable to grow roses in solid beds than in benches, but these are not general by any means. If it were so why would so many hundreds of houses all over the country that formerly had roses planted in benches and are now furnished with benches and have the roses growing on them to the entire exclusion of solid bed plan? It may be well to ask here how this change has been brought about? Not by mere chance or whim; neither is it because it is less expensive to grow them by this method; on the contrary it has been brought into almost general use by careful experiment, and in many cases which have come under my own observation by being as it were forced upon conservative men, they finding to their cost that they were being left in the race and had to make the change to keep up; and such men did not change all their cherished system in a day or a year, but after giving the two methods a fair and impartial trial they were very glad to adopt the most expensive method; not because it merely cost more money, but because they could get much better returns for the money invested.

The solid bed system requires less care in every way, and for that reason alone commends itself to those who like to take life easy; and where roses are wanted more in spring and summer than in winter I would say emphatically grow your plants so, but where roses are wanted in winter, and the houses they are to be grown in wanted to pay the best interest on the capital invested, then you will have to go to the bench system for your answer. I do not wish by this to infer that roses in solid beds will not and do not produce fine flowers in winter, on the contrary I have found in my experience some varieties that will do fairly well, but I have also found by experience that the same varieties do a great deal better and pay me a much better interest for the money and labor invested when grown on benches, but then we want our roses in winter as we have no sale for them worth mentioning in summer months.

To grow roses on benches they must have constant and regular attention, must never be neglected or left to take care of themselves not even for one hour, and to those who are not willing to give them good and liberal treatment I would say don't attempt to grow them so, but if you want a few roses without much cost, expensive roses never mind (winter) have them planted in solid beds.

As to quality, I have grown myself and seen them grown by others all the leading varieties of roses in solid beds and on benches for comparison, and the blooms from the benches were far superior in substance, size and color to those from the plants in solid beds in winter.

JOHN N. MAY.

Scarcity of White Flowers in Fall.

This is a subject of more than ordinary importance to the florist, and I have been anxious to write a few words in reply to Mr. Taplin, of Detroit, Mich., whose article appears in the *Florist* of August 1, because I have been there and can fully sympathize with him; in fact what florist has not been often driven to his wits end to scare up a few flowers—more especially white ones—during the fall just previous to the advent of chrysanthemums—which if sufficient space is at hand may now be relied upon from the middle of October until New Years.

But although we are all ready to admit the present and ever increasing value of

the "mums," and the many uses for which they are applicable, their very presence seems to create a necessity for something else, and what good solid every day substantial white flower is that something else? I feel perfectly safe in assuring Mr. Taplin that if florists in this section were to depend upon white azaleas and Chinese primroses we should soon be applicants for admission into the poor house. Good double white azaleas are quite acceptable some times, but the single white and primroses have long since lost their value here as standbys. For years I grappled with the difficulties of the position and am thoroughly familiar with the inconveniences, aggravations and all the other perplexities attending the situation, but I think I have solved the knotty problem and feel as though I could now survey the scene with perfect complacency and feel able to impart the information for the benefit of all, without money and without price.

The grand secret lies in having an abundance of white roses and white carnations; with these two prime substantials in quantity the florist is well equipped for business, then if he has white hyacinths, bouvardias, lilies of sorts, stevia, frezias and a few other things as auxiliaries, he has the key to the situation and is ready to assume the position of a dictator with a sensation of independence worth a good deal of hard work to experience.

For white roses to fill out my programme I depend upon the *Niphetos*; carry over an old bed every year and it is two, three or four years old it is none the worse for the purpose. My plan is to let the bed gradually dry off in July, giving in August just sufficient moisture to keep down red spider and to keep the wood plump; towards the end of August they will break naturally like giants refreshed. In August, however, the bed is just such blind heads as you know to be absolutely worthless. Clean the bed thoroughly of weeds, dead leaves and every other nuisance, then give a very light dressing of pure bone meal well stirred into the soil, taking care not to injure the roots, then apply a one inch top dressing of well rotted cow manure and finish with a good watering; then if you are not delighted with the results it is because something is wrong. I have a bed treated this way two weeks ago from which fine roses are already being cut with every prospect, judging from appearance, of a plentiful supply throughout the fall and winter, besides, I have another bed to treat in exactly the same manner in ten days or two weeks hence, which will still further assist in furnishing a continuous supply.

If we would be on the top round of the ladder with carnations throughout summer and fall it is important to begin in good season; October struck cuttings of some sorts if encouraged and grown right along may be had in bloom in June or July with a certainty of their flowering throughout the fall, and even winter in some localities. Good stout carefully selected December struck cuttings of the right kinds may be brought into flower easily the following August, and may be had in increased quantity and improved quality throughout the fall and into the winter months.

My plan to accomplish this end is to plant out in a prepared frame as early in the season as the weather will permit, cover with sash as long as such protection is necessary, stop the plants not later than May, (if stopped first of May and the sorts are right they may be expected in flower first of July or there-

PHALAENOPSIS AMABILIS

about, if stopped last of May they will flower late in July or early in August) then allow them to grow and flower. My frames are situated so as to command an abundant supply of water whenever necessary to the growth of the plants, and when the nights become cold in the fall we put on an extra board to raise

the frame and put on the sashes; as a general rule this treatment will carry them safely right along into December, by which time carnations housed in September or October will be flowering abundantly.

At this writing I have a large bed of Silver Spray that have been flowering

ever since July, and judging from their present appearance, with the protection above described, they will flower along into the winter. I have also a six foot wide frame 100 feet long filled with such sorts as Lamborn, Grace Wilder, Portia, Tidal Wave, Buttercup, etc., which are now a mass of buds and which I expect

will come in handy through October and November right where they now stand, as we shall add a board to the height of the frame, put on sash on cold nights and even other protection if found necessary.

The methods above described I have found of great assistance in helping out with a supply of flowers at a time when so very important and valuable; the circumstances of other florists may suggest improvements to the above as to means of production, and even sorts of flowers suitable for the purpose. But I am quite strongly impressed that good Niphetos roses and good white carnations will be found hard to bent as flowers for every day use.

I am inclined to think that a very serious drawback with many florists consists in their anxiety to carry over the winter large numbers of such things as coleus, verbenas, geraniums, and many other things in the way of soft stuff, which might be purchased in spring for much less than they could themselves grow it. I remember some years ago I made a calculation on the cost to me of a lot of geraniums that I was selling at ten cents each, after taking everything into consideration, putting a fair valuation on space occupied and value of everything used and with the closest kind of figuring I found that they had cost me so nearly twenty cents each that there was no fun in it. I at once determined that valuable greenhouse space in large cities might possibly be used to better advantage than growing geraniums, coleus, verbenas, etc., and have since then managed my business accordingly.

Locations where land is cheap are the places to grow such, but if we would have the business profitable on high priced land in cities, a continuous supply of the best flowers, especially white ones, is of the first importance, a good bed of white carnations will be found so much more profitable than the same space occupied by any of the plants named, that comparison is entirely out of the question.

H. E. CHITTY.

Paterson, N. J., Sept. 12, 1890.

A New Departure—Claiming of Names for Seedlings.

To prevent confusion and duplication of names of chrysanthemums I desire to appropriate the following names for my seedling chrysanthemums for 1890, viz.: Salvator, Eurus, Potomac, Esplanade, Anna J. Sprague, Geo. Washington Childs, J. C. Vaughan, John H. Taylor, Ernest Asmus, Thos. H. Spaulding, E. A. Wood and Tommy Adams.

In doing this I expect to be criticised and may be condemned. Some will say the names are not *catchy*, others that they are not *euphonious*, and many of them *are too long*. The latter expression I expect from the reformers of nomenclature, and that they will say that I had no right to think of naming my seedlings without first submitting their proposed names to them. Why should I, or any one else,

ever consider or concede the right to name a seedling to any individual who never had the first thing to do with raising or caring for it in any shape or manner? The names I propose are commemorative and for that reason I wish it to be understood that George Washington Childs is not too long a name for me to write, and if Mr. Childs had three or four other given names I would surely add them, and if one label was too small I would use two, as it is Mr. Geo. Washington Childs I desire to name a seedling for and not any other Childs.

These reformers of nomenclature it seems to me will extend their labors into the human family very soon, and we may expect in a short time on the arrival of a married couple's first born a committee of one or more to wait upon the dotting parents to explain that the baby's name is to be plain Joseph or James if a boy, or if a girl Mary or Susan, without any intermediate or other frivolous names.

I know great stress is laid upon taking names, some go so far as to say that it is the name that either makes or kills the sale of plants and flowers. What an absurdity! If names make the success, sell the names and don't bother with the plant at all. The mechanics on one side and the theorists on the other make such statements. But when the truth is told it is the merit of the plant that brings it and keeps it in its position let the name be what it may.

For generic and specific names let us have Latin and Greek, for commemorative names leave that to the raisers of and distributors of seedlings, as it is their right and title.

JOHN THORPE.

Seasonable Notes.

It is getting more and more exciting every day. Where plants and flowers are growing for exhibition the accidents happen more frequent and the disappointments are nearly mature. Grass hoppers must be looked after as they do a great deal of damage in a very short time, the succulent shoots topped with a juicy bud seem to be their favorite food. I find the only way is to catch them with the finger and thumb, always approaching them from behind when possible.

Thin! Thin! Thin!!! Let this be done thoroughly and well according to instructions given previously. Any training by tying over or twisting must be done at once or the plants will be rough and unsightly at flowering time.

Plants should all be housed by this time except very early kinds that are wanted for exhibition in November. These should be placed in some sheltered place where they get a little sunshine, but no wind, and also where they can be easily taken inside on cold nights, to be taken outside again each favorable morning.

Plants that are backward should be placed in a very light house and subjected to a little fire heat after a few days' housing, remembering to water carefully.

If plants are infested with black or green fly it will be well to fumigate two nights in succession before the flowers begin to show color.

Don't use any more stakes than is necessary. Don't tie with string as thick as a lead pencil. Don't leave the ends of the strings two or three inches long. Don't forget to wash the pots before taking plants to exhibition.

JOHN THORPE.

THE DAILY PRESS is again carrying its annual load of items regarding the "night blooming cereus."

Wire Worms.

If G. B. S. will add three or four pounds of unslaked lime to every bushel of soil he uses it will make the wire worms so sick that they will give his seedling carnations a wide berth in the future; besides the health and color of his plants will be so much improved that he will think they belong to a new race of pinks.

The best way to use the lime is to spread the soil in a flat heap say ten or twelve inches thick, then place the desired amount of lime in lumps on the top, when the latter has become slacked and pulverized the whole should be turned over two or three times and thoroughly mixed, it is then ready for use. H. E. CHITTY.

Seasonable Notes.

No time should now be lost in having all carnations intended for flowering the coming fall and winter placed in their winter quarters; for while the carnation may be regarded as a half hardy plant and capable of withstanding a few degrees of frost, I almost invariably find that buds so exposed are as a rule more or less liable to injury.

The finest carnation flowers are usually those which are produced on stems the greater part of which are made after the plants are established on the greenhouse benches; for this reason it is good practice to stop them according as they are required to flower; if wanted early stop first of August, and later if so required; most kinds if stopped at former date will be ready to make quite a show in October, while the later ones may remain longer outside without injury.

Give carnation houses abundance of air both day and night as long as weather remains fine and water early enough in the day to allow the plants to dry off pretty well before night comes on; there was a time when it mattered little when we watered carnations, but that time seems to have gone; carnation growing seems a different experience now to what it was years ago; then we would plant them on the benches, give them a good watering and that settled the business until they needed water again, and many a time have I gone into the houses just before night and given them a sprinkle overhead and next morning they would look as bright as a new dollar; but it seems to me that if I was to commit such a foolhardy act now the probabilities are that I would find several dead plants in passing through the houses next morning. In fact this has been my experience more than once.

I have commenced a new departure this fall with regard to white carnations. I have said good bye to Hime's White and instead have planted Lamborn. Nearly four thousand of the latter grace my side benches and many of the first planted are already flowering, while all the benches so occupied are full of buds in various stages of development and present a very promising appearance. Of course it was like parting with a dear old friend, but considerations of economy compelled me to it, I could not afford to grow it any longer on account of its habit of growing in crops which usually insisted upon

coming months apart, and during the intervals I was obliged to buy large numbers of white carnations for the requirements of my business; the outlook at present would seem to indicate that I shall have no cause to regret my action in this matter, but will report as the season advances. H. E. CHITTY.

Paterson, N. J., Sept. 23.

The Award on Pots at Boston.

I have just read Mr. Craig's rebuke for the charge made by A. H. Hews & Co. of impartiality on the part of the committee. I sincerely hope that the S. A. F. will make Mr. Craig's sentiment in this matter their standard as well as the style of pots referred to. But I do not think this is all that should be done. Messrs. Hews & Co. say that the pots to which were awarded the Certificate of Merit were very many of them either ground, filed, turned or sand-papered to size. This is a very serious charge, which should be accompanied with proof. We must not allow any such charge to go without notice. If this be true, the committee must surely have been deceived and the S. A. F. should demand such proof at once. The S. A. F. must shoulder the responsibility taken by its committee and see this affair "snatched," not for \$3,000 as per Hews & Co.'s offer, but for justice. C. B. W.

—I was somewhat puzzled upon reading Mr. Craig's letter in your last issue. Is it quite fair that Mr. Hews should be rebuked for the position he has taken while his challenge remains unanswered?

It is an undeniable fact that other experts in this vicinity are expressing themselves even more strongly than he has done, and if no explanation is given of what now seems gross injustice, future awards will have but little meaning. Boston, Sept. 23. ROBT. FAIRCHUR.

—I wish to answer Mr. Craig through your columns. It seems to me that he cannot be aware that before the award was publicly announced the personal attention of the committee was called by myself to a defect in the pots, which he must admit should have been declared them entirely from competition.

Had I not known that these pots were ground to size after having been made (a direct violation of the principal condition of the award) no word of complaint should have come from me. A. H. Hews.

Boston.

The cut flower trade in Boston has been at a standstill for the past month. Roses have been in quantity considerably in excess of the demand, consequently prices have been very low, especially for large lots. The "summer resort" trade has about disappeared as an influence on prices during August. A few years ago this branch of the trade was an important one to the growers and wholesalers of Boston, making a most welcome boom in midsummer when the growers located in less fortunate neighborhoods were obliged to go hungry. But from various causes the end has come and the August boom is no more. In quality roses are improving rapidly, some of the lots coming to market now being of very fair quality. Carnations are not plenty, but there is still a good supply of asters and the scarcity of carnations will not be felt until the asters are finished. Tuberoses are plenty and cheap. Lily of the valley sells for \$6 per 100 and is first rate in

quality. Violets are seen occasionally. The call for orchids has commenced already and the growers of these luxuries look forward to an unusually brisk demand during the coming season. Lapagerias, white and red, are now at their best and are well fitted for use in the choicest work.

Plant auctions have begun and semi-weekly sales are held by both the regular auction agencies. Decorative plants, such as palms, pandanus, etc., take the lead.

The recent fruit and vegetable show of the Mass. Hort. Society was quite extensive and in every way creditable to the society and to the exhibitors. The attendance was good. An interesting feature was the department of canned and preserved fruits. The display in this line was very extensive and attracted much attention. The platforms and tables were decorated with plants by W. E. Hyde and Frank Becker, and Wm. Martin made a nice table design for the main exhibition table.

The next important event will be the chrysanthemum show. A number of the Bostonians are talking of visiting the Philadelphia chrysanthemum show in November. It is much to be regretted that for some unexplained reason, "contrariness" most likely, those whose duty it is to arrange dates for chrysanthemum exhibitions in both Philadelphia and Boston persist in selecting "conflicting dates," base ball fashion, year after year. There is no good reason why these two exhibitions with their very considerable difference in latitude should not be held on successive weeks, thus giving those interested an opportunity to see both displays. W. J. S.

Philadelphia.

Business is much better.

Florists about town are putting finishing touches on their places and getting ready for a good fall trade.

We notice a new establishment on Eleventh street below Walnut. Eleventh street florists are noted for their "get there" ability and this new addition being of African descent, will lend color and no doubt make the race very interesting.

There is a great scarcity of blooming plants hereabouts. Asters are done and there is nothing in sight save a few carnations until chrysanthemum time. It seems a pity that there should be a demand that we can not fill.

Mr. Blanc's collection of curios has increased to such an extent that he has to extend his establishment to make room for them. His collection is very interesting and the demand for them is increasing rapidly.

The ball team from Lonsdale's and Burton's nurseries invited the florists up for another game on September 18; it resulted in a victory for the florists by a score of 13 to 6. By common consent Mr. Daniel Farson was chosen to umpire the game. He managed to overcome the difficulties of the first three innings and then, well, he wasn't "in it." He redeemed himself, however, in a speech after the game. Everybody had a grand good time.

Tuesday, September 23, Messrs. Craig, Harris, Lonsdale and Burton sent a fine collection of plants to Young's auction rooms in New York, with the result that all the trade thereabouts turned out and bid the prices up on one auction in their eagerness to get something fine, in much the same way that lovers of art buy the works of celebrated artists.

The Florists' Club is about "solving the solution" of club house, and before many

months—in fact it may be that visitors to our grand chrysanthemum show will see more than fine flowers. Let the men who are given to rolling, and it seems now that it is one of the requirements or rather accomplishments of the business, keep it up and when they come on to see us they will have a chance to knock over pins from under us, as it were. D.

Chicago.

In connection with the present effort to organize a horticultural society with headquarters in this city, and to place the same upon an enduring foundation the following historical facts, for which we are indebted to Mr. Edgar Sanders, are of considerable interest. The first society of the kind ever organized in this city of which there is any record, was the Chicago Horticultural Society, organized in 1846. It gave several exhibitions which were good for that early time in the history of the city. The last published mention of it appeared in 1849, when it had 80 members. In 1857 the Cook County Agricultural and Horticultural Society was established and it gave one good exhibition, or rather a fair, the fall of that year. This was held on the prairie north of the city, on the space now bounded by North avenue, North Clark, Division and Wells streets. The society existed until the fire of 1871. In 1858 the Chicago Gardeners' Club was formed and continued in existence until January 8, 1867, when by resolution all its effects, including a library, were turned over to the new Chicago Hort. Society, organized in 1866. At the time of the fire of 1871 this society had rooms on Monroe street and possessed the nucleus of a library.

In 1876 the Nurserymen's and Tree Planters' Protective Association was formed, a trade organization, whose objects were indicated by its name. It held meetings for some time, but finally dissolved. During the early years of the city's history occasional horticultural fairs were held by the old Mechanic's Institute. In 1882 the Chicago Florists' and Gardeners' Ass'n was organized, but it expired after holding only three meetings. The Chicago Florist's Club, organized in 1887, is still in existence and is strong both in membership and financially.

The site for the World's Columbian Exposition of 1893 has at last been decided upon. As it includes the choicest part of the South Park system the horticultural department of the exposition is at least assured of every benefit that can be conferred by an advantageous location.

Subscription books for stock in the Chicago Flower Exchange have been opened and those desiring to subscribe may do so at any meeting of the Florist Club, or between meetings by calling upon the secretary of the club.

At the last meeting of the Florist Club it was decided to hold meetings every Thursday evening until the chrysanthemum show, in order to perfect all arrangements promptly for the exhibition.

Preparations for the Florist Club's exhibition next month are going rapidly forward, and the indications are that the display will greatly exceed that at any previous show.

The "Swiss Floral Co." is the legend which has appeared on the window at 226 North Clark street.

C. Freshman has opened a floral store at 101 North Clark street, in the Palace Hotel building.

News Notes.

BERLIN, MASS.—Samuel Wheeler is building a new carnation house 100x18.

READING, PA.—Messrs. Hoskins & Giles, J. H. Moore and John C. Hepler made excellent floral displays at the recent fair.

NEW BEDFORD, MASS.—The recent exhibition of the Gardeners' and Florists' Club received much favorable mention from the local press.

BUCKSPORT, ME.—The dwelling house of Mr. F. H. Moses, the florist of Bucksport and Bar Harbor, was burglarized recently. Mr. Moses' loss is quite heavy.

LA CROSSE, WIS.—At the recent fair the Oak Grove Greenhouses were awarded 13 first prizes in the floral department, including one for finest general collection of plants.

LYNN, MASS.—The annual exhibition of the Houghton Horticultural Society was held in this city September 16 and 17. There was an excellent display of plants and fall flowers.

SAN FRANCISCO.—At the meeting of the State Floral Society held September 13 a committee was appointed to make arrangements for a chrysanthemum show to be held this fall.

SHREWSBURY, MASS.—The Shrewsbury Floral Society held its 19th annual exhibition September 12 and 13. There was a very extensive show of flowers. The exhibitors were all amateurs, mostly ladies.

NEWARK, N. J.—The third annual chrysanthemum show will be held the first week in November. Intending exhibitors may communicate with Mr. Charles Bird, of Arlington, who has charge of the details of the exhibition.

BANGOR, ME.—The lady amateurs were out in force to compete for the premiums offered for cut flowers at the Eastern Maine Fair, and there was a very creditable display. A display was also made by F. H. Moses, the florist of Bucksport.

PORTSMOUTH, N. H.—Mr. Wm. Patterson, gardener to Hon. Frank Jones, has been very sick for the past four weeks, and at one period was practically given up by his physicians. A slight improvement has been noted within the last few days and there is a fair chance for his recovery.

PITTSBURGH.—A legal notice published in the daily papers September 22 announces that on September 13 an order of court was made that the B. A. Elliott Co. be dissolved and its assets be distributed among the parties interested on October 4, 1890, unless exceptions be filed prior to that date.

CINCINNATI.—A meeting of a committee from the city council and florists of this city was recently held to confer together regarding the location of the flower market for which the late Mrs. Mary Holroyd bequeathed the sum of \$10,000, an additional \$5,000 to be used if needed. An adjournment for two weeks was taken to investigate the locations suggested.

BALTIMORE, MD.—At an adjourned meeting of the board of managers of the Maryland Agricultural College held Sept. 19, a chair of botany and horticulture was created and Professor Brunk, a graduate of the agricultural department of Cornell University and a former president of the Texas Agricultural College, was elected to the position.

GERMANTOWN, PA.—At the last monthly meeting of the Germantown Hort. Society first premiums were awarded as follows: To Frank Smith for 4 plants in bloom; to Thos. Mechem & Son for 6 double dahlias; to John Brown for 6 China asters; special premiums to John Brown for a Cissus discolor; to John Kirby for a bilbergia; to Robert Morrison for 4 plants in flower.

LOS ANGELES, CAL.—A Floral Society was organized here September 15. Officers were elected as follows: President, Eli Snyder; Vice-President, C. E. Brydges; Secretary, H. W. Kruckeberg; Treasurer, J. C. Harvey. The Chamber of Commerce has generously offered the free use of a room for holding meetings. It is proposed to give a chrysanthemum show early in November.

MINNEAPOLIS, MINN.—The Society of Minnesota Florists held its annual meeting in this city September 11. The old officers were all re-elected. The society will give an exhibition of chrysanthemums in this city November 12 to 14 inclusive. Messrs. Wyman Elliott, Wm. Desmond and Richard Wessling were appointed a committee to make arrangements for the exhibition.

NEWPORT, R. I.—The exhibition which opened at the Casino September 10 contained some remarkably fine specimen plants, and the arrangement was excellent. The bulk of the display was made by the exhibitors from the conservatories of Messrs. Wetmore, Vanderbilt, Belmont, Lorillard, Rogers, Fiske, Taylor and Marquand, and Messdames Brooks and Paron Stevens. Florists Hodgson, Brandt and Gibson Bros. also made exhibits, mainly of cut flowers and floral arrangements.

NEW ROCHELLE, N. Y.—The new pond of aquatics at Messrs. Siebrandt & Weller's nursery has been a great show for some weeks past. Three large plants of Victoria regia have been constantly in bloom, in addition to many choice nymphaeas, nelumbiums and other aquatic plants. Several new houses are in course of construction at this nursery, including an immense packing house in which plants of any size can be handled and through which large vans can be driven.

ST. LOUIS.—The Jordan Floral Co.'s loss by fire during convention week was quite a serious one. The shed to which most of the houses were attached was entirely destroyed and very serious damage done to the contents of the houses by heat and smoke. A valuable collection of ferns was entirely destroyed and a large stock of palms and like decorative plants so injured as to be worth but little. Many of the palms were very old and valuable specimens, which it will be difficult to replace.

GRAND RAPIDS, MICH.—The Westminster Presbyterian Sunday school held its annual flower show the evening of September 18. Last spring Superintendent C. L. Frost distributed seeds among the pupils, and the floral exhibition was of flowers grown from those seeds, together with others donated for the occasion. He took this novel way of cultivating the horticultural taste of the young people under his care. The exhibit comprised all the well known varieties and was highly creditable to the young florists.

SPRINGFIELD, MASS.—Emil A. Neudahl died September 8 at his home in this city of Bright's disease and pneumonia. He was 36 years of age. He was a son of the late Albert Neudahl, of Elmira, N. Y.

Mr. Neudahl came to this city about four years ago from Rochester, N. Y., as foreman for C. F. Fairfield and became a partner in the business in 1888. He was considered to be one of the best rose growers in this part of the state. Messrs. Gale, Wilkinson & Son, Herrick and Fairfield remembered their brother florist by burying the casket with beautiful floral tributes.

DES MOINES, IOWA.—At the recent Fair premiums in the professional list were awarded as follows: Collection greenhouse plants, greatest variety, W. L. Morris; second, W. M. Elrod; third, R. A. Rollinson & Co. Foliage plants, W. L. Morris; second, Rollinson. Geraniums, of the bronze, silver, gold, or tri-colored varieties, Morris; second, Elrod. Geraniums, plants in bloom, Morris. Carnations, in bloom, greatest variety, Morris. Collection ferns, Morris; second, Rollinson. Roses, R. A. Rollinson & Co. Fuchsias, Morris. Begonias, Morris. Begonias Rex, Morris. Tuberous rooted begonias, most tastefully planted vase, R. A. Rollinson & Co.; basket, Morris; second, Elrod. Palms, R. A. Rollinson.

HARTFORD, CONN.—The fall exhibition of the Hartford County Hort. Society was held September 9 to 11. There was an excellent display. First premiums were awarded as follows: Floral design, G. W. McClunie; greenhouse and stove plants, B. E. Beemer; palms, Robt. Patches; ferns, Wm. May; variegated leaved plants, Christopher Besold, gardener to Mrs. Colt; dahlias, E. B. Smead; asters, E. M. Francis; crotons, B. E. Beemer; geraniums, C. H. PEMBER. Special prizes—Tuberous rooted begonias, James Smith; collection of sweet peas, E. M. Francis; nasturtiums, Miss E. F. Talcott. Special mention—J. H. Bairdian, seedling glloxinia (with diploma), P. A. Sears; pansies; James Smith's Adiantum Farwellense as best fern on exhibition.

LENOX, MASS.—The "tub" parade which always denotes the height of the Lenox season occurred September 20. There were in line fully thirty "tubs" (as the buckboards and phantoms are called) filled with society people who had displayed great ingenuity in decorating their turnouts. The buckboard which won the prize was ablaze with salvin and scarlet gladioli. First came a dog cart decked with golden rod and an umbrella of same flower. Next came a buckboard trimmed with white hydrangeas, the occupants holding a huge parasol of the same flowers. The third was a village cart covered with a canopy of sweet peas. A yellow buckboard was trimmed with blue corn flowers and yellow marigolds with an umbrella completely covered with corn flowers overhead and a lap robe of yellow flowers. A phantom was completely massed with white hydrangeas. Another phantom was covered with wild asters. A cart was a mass of bright autumn leaves and sheaves of wheat. Scarlet nasturtiums decorated another buckboard, and other "tubs" likewise decorated filled the line.

Long Island News Notes.

The following extract from the Brooklyn Times will interest some of your readers: "Mr. John A. Reed, of the firm of Reed & Funnell, florists at Huntington, has been declining with that dread disease consumption for a long time, until now he is unable to exert himself in the least. On Monday a cousin, an elderly gentle-

man of Brooklyn, visited him at Huntington and took the sick man to his home in the city, where he will spend the remainder of his days. During the past few months Mr. Reed has failed very perceptibly, and spent a week in camp life at Eaton's Neck, hoping to change would revive him, but to no purpose. Many prominent New York people will remember John A. Reed as the once flourishing diamond broker, and members of the Press Club can look back with pleasure upon the dinners given them at which Mr. Reed presided as host. He was regarded as an expert judge of precious stones. Some years ago he retired from active city life and moved to Huntington where of late he has been engaged in the cultivation of small fruits and flowers, for which he had a natural taste. He is the originator of 'Reed's Island Beauty' and the 'Volunteer' tomatoes."

Messrs. H. T. Funnell & Son, formerly Reed & Funnell, are moving their place of business and erecting three new houses for growing carnations and violets.

William Schubert, formerly with John Lewis Childs, is putting up two houses for cut flowers, at New Hyde Park.

Herman Scher of Queens formerly with Hallock & Son, is putting up three houses for cut flowers.

C. E. Parnell, gardener to D. F. Manier, has built a house at Floral Park and will soon enter the employ of John Lewis Childs.

Rumor has it that August Plügg and C. Lescamo, lately with Mr. Childs, will form a partnership and engage in a general seed and bulb business.

Mr. Childs is already moving into his new seed warehouse which is nearing completion. He is building seven new greenhouses 10x100 feet, heating them with hot water under pressure; E. S. Titus is doing the work. They will be ventilated by Evans' apparatus. The old seed store will be moved across the railroad track and attached to these houses.

Louis Sienrecht has built a large addition to his house the past summer. Since his return from Boston Mr. Sienrecht has been wrestling with a severe attack of rheumatism, but is around again. A.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By good gardener on gentleman's place. Married. Address J. B. West Conshohocken, Montgomery Co., Pa.

SITUATION WANTED—Commercial or private; German in 4 years old; married; salary \$100 per month. Address THEO. ARVED, 117 N. Western Ave., Chicago.

A BARGAIN.

A WELL ESTABLISHED Florist Business for sale. Four houses, well stocked and equipped. Must sell for good reason, even at a sacrifice. Growing Ohio city of 25,000 inhabitants. Large trade with surrounding towns. Address OPPORTUNITY, care Am. Florist.

Cut this out.

MILDEW.

No one wants it! But many folks get it, and they don't want to keep it. So listen! A mildew destroyer must diffuse itself thoroughly to be effective; if you have insects in the greenhouse they are in spots and places—but the mildew comes like the dew, its spores catch every where.

For four years we have offered free, a package of *Grape Dust* or mildew powder for trial, if the tryers would pay carriage. Scores of packages have been sent out, a great many of those who tested *Grape Dust* have relied on it thereafter, and their confidence has not been misplaced. To use *Grape Dust* economically we give the experience of a *Rose Grower* who has five acres under glass, whose houses measure over a mile in length.

DIRECTIONS.

Take a good strong bellows, take off all the fixings, stop up the vent, and put a pound or so of *Grape Dust* through the nozzle—now go to the end of the house opposite the door and point your bellows at the end, begin to blow and back down the passage toward the door, as you go you raise a cloud of light dust that settles evenly and finely—the result is that wherever mildew settles this dust does, and it kills the mildew, leaving the plant in good condition.

There is no preparation its equivalent for Economy.

Sold by the SEEDSMEN of AMERICA.

THE AMERICAN FLORIST CO., Chicago.

A copy of the premium list of the Illinois State Horticultural Society for its exhibition at Cairo, December 9 to 11, has been received. Premiums to the number of 123 are offered, of which 96 are for apples, 13 for pears and grapes, and 14 for vegetables. Not a single premium is offered for plants or flowers. This is the society which issued the call for a congress of horticultural societies and which had no less than eight delegates present at the meeting to vote on recommendations to be made to the World's Fair directors as to the conduct of the horticultural department of that exposition.

THE AMERICAN WILD FLOWER CLUB.—We have received a pamphlet of 16 pages outlining the plan of this club for the preservation of the wild flowers of America. It can be obtained from Mr. Chas. S. Horn, secretary, Wilmington, Del., by enclosing stamp for postage. Mr. Horn writes: "The rapid disappearance of our beautiful native flora has become a subject of national agitation, and our leading botanists are giving it their most profound attention. We want no national flower until our beautiful natives are saved to us."

WE HAVE received from Mr. H. E. Chitty, Paterson, N. J., a box of carnation flowers, among which were handsome blooms of Lizzie McGowan, the new white; of Grace Wilder and Portia, both cut from an old bed planted twelve months ago; of Buttercup from plants growing in the open air and which lacked the rich tints of pink and carmine commonly seen in this variety; and a bunch of Tidal Wave cut from plants in the open ground and which were of a wonderfully rich color.

MANUFACTURERS of electric alarm apparatus to indicate danger from frost in greenhouses have not failed to advertise the same in this paper.

Catalogues Received.

V. H. Hallock & Son, Queens, N. Y., forcing bulbs; Gause & Bissell, Richmond, Ind., bulbs and plants; Jno. R. & A. Murdoch, Pittsburg, Pa., trees, bulbs and plants; Geo. W. Miller, Chicago, plants; P. J. Berckmans, Augusta, Ga., plants and trees; Schlegel & Fottler, Boston, Mass., bulbs; John S. Calkins, Pomona, Cal., trees and plants; E. Bonner & Co., Xenia, O., plants and bulbs; Jas. M. Lamb, Fayetteville, N. C., plants and bulbs; Souper & Notting, Luxembourg, Europe, new roses; Currie Bros., Milwaukee, bulbs, seeds and supplies; Ketten Bros., Luxembourg, Europe, roses; E. H. Kelage & Son, Haarlem, Holland, Dutch bulbs.

PANSIES.

A FEW POINTS TO CONSIDER.

QUALITY the important feature in pansies is well taken care of in my strain; in fact so well that many of my customers say there are no better ones. Those who bought a few hundred on trial last season are placing their orders now for a fully supply.

THE PLANTS are nice stocky seedlings that can be mailed or expressed safely long distances and at a moderate cost. Samples will be mailed for 10 cts.

QUANTITY I can furnish them in any number, 10 or 10,000, all from the same beds and same seed. A trial order is respectfully solicited.

PRICE Free by mail 100, 75 cts.; 500, 35c.; by express 500, \$2.50; 1000, \$5; 2500 and upward 10 per cent discount.

L. B. 338.

ALBERT M. HERR, LANCASTER, PA.

ZIRNGIEBELS NEW GIANT MARKET AND FANCY PANSIES

Have been exhibited everywhere and admitted to be the finest strains at the present time.

"Huge jewels of velvet and gold."—Boston Transcript, May 10th, 1893.

Trade packages of 1,500 and 500 seeds respectively, at \$1.00 each. Full printed directions for the proper cultivation of these pansies with each package of seeds.

IN ANSWER TO MANY INQUIRIES:

We have no seed of giant Pansies to sell by weight, being too scarce and high. We renew our stock every season, from seed obtained direct from Messrs. Bugnot and Cassier, at the rate of thirty and twenty dollars per ounce, respectively (with a limited supply), as we consider their seed to be the cheapest, quality considered. We do not handle any other.

DENYS ZIRNGIEBEL,
NEEDHAM, MASS.
Mention American Florist.

PANSIES

The grandest collection ever offered, including all the latest novelties. Our seeds are warranted to be fresh, pure, and strictly first-class in every respect. Send for new Circular and Price List to the

HENRY A. DREER, Philadelphia

GLADIOLUS BULBS.

Prevailing Colors, Pink and White. Over 100 named varieties, and a number of choice seedlings, all mixed together. This collection has never been culled, and it has received a number of first premiums. In fact it has never failed to do so when exhibited. To avoid retailing these bulbs, I offer them this fall at \$10.00 per 100 for first size; second size, \$7.50. A quantity of small bulbs and bulbets at 50c. per 100.

Every Florist, Nurseryman and
Seedsmen should have one.

AMERICAN FLORIST CO., Chicago.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. MCCULLOUGH, Cincinnati, president; JOHN PORTER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1897.

Red onion seed is said to be short in California.

Severe frosts September 12 killed the growing vines in Nebraska.

ONION SETS are reported a rather short crop—it's a hard story to guess about.

LATEST ADVICES indicate the disastrous failure of the bean crop in western New York.

MR. S. B. DICKS, representing Cooper, Taber & Co., and Mr. J. Webster, with Howcroft & Watkins, of London, are now doing the U. S.

MR. EVERETT E. ROGERS, of the firm of Rogers Bros., Chubbuck, N. C., died September 9, in his 81st year. Mr. Austin L. Rogers, his surviving partner, will continue the business.

LOUISVILLE, KY.—T. G. Truman, dealer in seeds and agricultural implements at 319 West Market street, made an assignment September 9 for the benefit of his creditors. The assignee is the Germania Safety Vault and Trust Company. No schedules of assets and liabilities were filed, but it is estimated that the former will probably amount to \$25,000 or \$30,000. It is thought that the liabilities will not be much in excess of the assets. The firm was formerly McGill & Truman, and as such was organized and did business here about 20 years ago, and on up to 1887, when Mr. McGill sold out to Mr. Truman.

Situation Wanted in Seed Trade.

Scotchman, age 28 to 35 years' experience in all departments, gained in leading houses in Britain and America; well up in office work and correspondence. Certificates and references as to character and capability furnished. Address

SEEDSMAN, care American Florist, Chicago.

For Late Forcing.

A Remarkable Flower.

The following paragraph is making the rounds of the daily papers:

"A flower has been discovered in South America which is only visible when the wind blows. The shrub belongs to the cactus family and is about three feet high. The stem is covered with dead, wart-like lumps in calm weather; these lumps, however, need but a slight breeze to make them unfold large flowers of a creamy white, which close and appear as dead as soon as the wind subsides."

This must be the original "Wind Flower" and is probably a hybrid between a reporter and a champagne headache.

3,000 CEDRUS DEODORA.

PIERIS hastata. A splendid hardy fern. 2½, 3 and 4 inch pots, \$6, \$8 and \$10 per 100.

P. tremula. A good fern. 2½, 3 and 4 inch pots, \$6, \$8 and \$10 per 100.

TREE FERNS. All varieties and in all sizes.

ORCHIDS.

Of these we have the largest collection in this country.

Assorted named Orchids, cheap for beginners, \$7.50 to \$10 and \$15 per dozen.

Very good sorts for cut flower purposes, in strong plants, \$15, \$24 and \$30 per dozen. They comprise the following popular varieties: Angreum, Cattleyas, Cologues, Cypris, Dendrobies, Epidendrobies, Lelias, Lycastes, Miltonias, Odontoglossums, Oncidiums, and many other species and varieties.

We send our valuable new illustrated Catalogue, which contains many hints and cultural notes on Orchids, with every \$5 order, free.

In addition to the above list of plants, we have a large stock of the following varieties, all in excellent condition and in almost all sizes: Anthuriums, Alocasias, Crotons, Begonias, Marantas, Dieffenbachias, Nephthes, Amaryllis, Gardenias, Azaleas, Orange Trees, Greenhouse Vines etc.

Siebrecht & Wadley.

ORIGINAL AND LARGEST GROWERS OF

LILIAM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 140 in length, in a crop of *Lilium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that *Lilium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing."

The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

—* HALF A MILLION BULBS. —*

Be sure you get the genuine *Lilium Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Foreign Notes.

THE MORNING of September 1 there was quite a sharp hoar-frost in some parts of England.

MISS MARIANNE NORTH, the accomplished English botanist and artist, died recently, aged 60 years.

JAMES HACKHOUSE, the well known English florist and nurseryman, died August 31, aged 65 years.

DESPITE an indifferent season and sharp frosts there was a fine display of flowers at the exhibition of the National Dahlia Society at the Crystal Palace, London, September 5 and 6.

THE DISEASED condition of the begonias of an English gardener has been found to be caused by colonies of minute eel worms living and breeding between the two membranes of the leaf.

THE SHOW of early chrysanthemums was larger than last season at the exhibition of the National Chrysanthemum Society at the Royal Aquarium, Westminster, September 10 and 11.

NEW ENGLISH BOOKS.—The art and practice of landscape gardening, by Henry Milner; Sap, does it rise from the roots? by J. A. Reeves; Manual of injurious insects, second edition, by Miss Ormerod.

FLORAL DESIGNS.

A book which tells how to make them and shows how they look. Fifty tinted plates of approved designs, in fine shape for showing to customers in place of the bare wire designs; it "gets there" much better, and looks pretty while doing it. It is a good investment for any working florist at \$3.50, postpaid, and can be had of

J. HORACE McFARLAND,
Box 55. HARRISBURG, PA.

S. A. F. ATTENTION.

Our defeated competitor in "Standard" Flower Pot contest at the Boston meeting, for the **Certificate of Highest Merit**, reflects on the members of the Committee of Award as not being impartial in their decision. The members of that Committee were M. A. Hunt, Terre Haute, Ind.; Chas. Henderson, of the firm of Peter Henderson & Co., New York, and Wm. K. Harris, Philadelphia, Pa. No fairer or more competent committee could be selected from the members of the S. A. F., and as far as diligent inquiry reveals, their decision meets with the approval of everyone excepting A. H. Hews & Co.

The official programme gave notice that the Certificate would be awarded to the display "which most nearly approaches the 'Standard,' such display shall consist of not less than one dozen of each size, made from working molds and not turned down." The sheet with drawings of the pots (which was gotten up by A. H. Hews & Co., under instructions of the Committee of S. A. F. and sent to the different potters for their guidance) shows 17 sizes, and the number we exhibited; one dozen of each, as required. In regard to the statement published by A. H. Hews & Co., that "very many" of our pots were "either ground, filed, turned or sand-papered to size," we wish to distinctly say that this is **FALSE**. The pots we exhibited for the Certificate were made exactly as we make them for our customers, and were not altered in any way whatever; in fact, it is impossible to alter the inside measurement after a pot is once made; a mold that will make one pot correct will make any number (until the mold wears out) exactly the same. In reference to the absurd "propositions" of Messrs. A. H. Hews & Co., we decline to be a party to the proposed exhibitions as it would be a gross insult to the honorable gentlemen of the committee, who, after giving their time and labor to the society, are at least entitled to common courtesy.

MT. HOPE NURSERY, ROCHESTER, N. Y.

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working moulds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN.** We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from $1\frac{3}{4}$ -inch to 7-inch inclusive, and 250 pots each from 8 inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

A. T. CEFREY'S

Patent Improved
Florists'

Immortelle Letter and
Pin Fastener.

CEFREY LETTER CO.,

GENTLEMEN—I find the new machine-made Immortelle Letters manufactured by you very saleable and in many respects superior to anything of the kind we have ever handled. Their uniformity of shape, size and color, the convenient form in which they are put up, and the excellent device for fastening them to the work, are among the most commendable points in your letters. Please double my last order and deliver as soon as possible. Yours truly,
W. J. STEWART.

CEFREY LETTER CO., 13 Green St., Boston.

DEAR SIR:—Please ship me five thousand letters as soon as possible. They are the best and most practical letters in the market. The pin fasteners are a long way ahead of the old-fashioned way of wiring. Yours truly,
N. F. MCCARTHY.

CEFREY LETTER CO., Boston, Mass.

DEAR SIR:—Send at once ten thousand small letters and five hundred large (two inch.)

GALVIN BROS., Boston.

We wish to announce to all florists that we have removed to much larger quarters, **No. 13 GREEN STREET, BOSTON.** We make our letters by machinery; they are not only more perfect in size, shape and color, but are the best and cheapest in the market. Our 2-inch letters are only two and a half cents, and the 1 $\frac{1}{2}$ -inch letters are only two cents apiece. Your customers will have no o' hers. Be up with the times! Send us your orders and we will ship you a supply for this winter. **They are the best in the market.**

THE CEFREY LETTER CO., 13 Green Street, BOSTON, MASS.

Got a Good Supply.

Tell Bro. McGowan if he expects to go to heaven he had better stop that turtle joke. I posted a notice on the school house that I would pay 5 cents a piece for land turtles, then had occasion to leave home and told my man to pay for them as they were brought in. Thirty-nine hours later I received this telegram: "I have bought 138 turtles; want any more?" Answer: "You can guess my answer, as I only have two small houses and very few snails." [KO. A. HEIDLER.

Bedding Plants.

I would like to learn through your valuable paper the best way to manage bedding plants to get them forward so as to have all in bloom by the middle of May. The reason why I ask is that decoration day comes on June first and whatever plants are left after that date and not sold are a dead loss except to plant out. Now how shall I manage the different bedding plants so as to have all ready and in bloom by May 15? Geraniums, fuchsias, heliotropes, etc. Also would you advise pinching back geraniums when first potted. E. D. J.,
Pittsburg, Pa.

ADVERTISING.—Our readers in the mail trade, both florists and seedsmen, will read with interest the article elsewhere in this issue on this subject, by Mr. W. Atlee Burpee, upon which no man in the American trade is better prepared to write.

WHAT will be the decision of the Secretary of the Treasury as to duty or no duty on dormant roses is a question which is now agitating many importers.

I am going to take this chance to say a word upon a subject of much importance to our young people in connection with the study of botany. It is really one of the simplest studies in the world; that is, there is of necessity, very little that is difficult about it. This simple, fascinating study of vegetable life is rendered repulsive to many young people because of the absurd, irrational, preposterous words which botanical authors have chosen to express simple methods, simple ideas, simple functions.

I am not going outside of my subject to illustrate this absurdity. We must, of course, recognize the necessity of a plant nomenclature that may be studied effectively in every language, and it is therefore indispensable that a single language—Greek or Latin preferably—be selected as the standard; the same as it is desirable that we should have a standard of weights and measures, or of money denominations. But when we come to study the physiology, the organography, the morphology of plants, the simplest and shortest words should be employed; and there is nothing that stands in the way of this but the habitual, bombastic proclivities of botanical authors. Let me illustrate this in a familiar way.

The way in which the sexes of plants meet and mate is as simple as the way in which animals meet and mate and the process does not need to be defined by long words difficult to remember. In a familiar way it may be said, the stamens are the fathers, the pistills the mothers, and the floral envelopes (calyx and corolla) the houses in which they live. But the two do not always live in the same house, which simple fact is described botanically by such hard words as dichinous, diecious, monoeceous, polygamous, monoeceous or dieciously polygamous, gynodioecious, andro-diecious, etc.

Now, inasmuch as they do not always live in one house and have no means of locomotion, the males have to do their courting by proxy. These simple facts, without which mating would be impossible, are given the unromantic qualifying names of anemophilous, entomophilous, aquamophilous and ornithophilous, as the love agent happens to be the wind, an insect, rain or a bird.

Again it happens with many flowers that the male or female is not in love simultaneously with the other. To accurately define this uncongeniality botanists use the words dichogamy, as a class or generic word, and proterandrous, proterogynous and synanthesis as specific words, meaning simply that the anthers mature before or after or with the stigmas. By such abominations, I say, young people are prejudiced against the

most simple, fascinating and God-inspired science known to man.

I have often heard of kits or outfits for crossing purposes, as if a variety of tools and special devices were required. They are of just about as much use as costly manicure sets are for the nails. In my practice a sharp pair of scissors, a pointed piece of wood, or even a wooden toothpick, a box for the flowers or pollen, sheets of tissue paper and a little strong yarn answer every purpose. A camelhair brush is rarely of service. If pollen can be gathered in quantity, as from rye, roses, honeysuckles, etc., it may be collected in boxes and applied from the point of a knife or by placing the ripe anthers themselves in contact with the receptive stigma.

You will not care to have me dwell upon processes. It is a thrice-told story. I would merely impress upon all the necessity of thorough work, and of abhorring all guess work. Open the bud, remove the green anthers, tie up the bud in close, fine tissue. Open it only to apply foreign pollen to the stigmas and at once again protect them from the possibility of contact with any other pollen. If, then, fruits and seeds develop, we know that the seeds are crossbreeds. We should be as confident as to the parentage of our seedling progeny as we are of that of our finest horses and cattle. Disregard of such teachings has led to endless confusion, as well as to wellgrounded doubts on the part of the public, that the parentage of many of our fruits and flowers is such as the originators claim them to have been.

Fifteen years ago I planted 62 different kinds of potatoes, each in a row 66 feet long, for the purpose of crossing them. Diligent search during the blooming period failed to reveal to me a single grain of pollen.

In 1874 we began crossing pelargoniums. The best varieties of that day were secured and our house filled with them. Each one was labeled with a parchment tag and numbered progressively from 1 to 500 or more. It was a simple matter to keep the record of parentage, since the number of the pollen plant was placed over that of the mother, making a proper or improper fraction in torn, as the case might be. I worked at this for two years during the plants' winter and early spring season of bloom. The result was 2,000 cross-bred seedlings, beautiful, symmetrical plants, as seedling pelargoniums always are. I had assumed in my inexperience that such painstaking, thorough work would insure astounding results. Already with delight had we thought of respected friends whose names we would give to the best of these wonderful seedlings. Our friends were spared the formality of thanking us for such honors, however. The wonderful productions—such as the world had never

dreamed of—were not among them. The whole lot was given away to those who cared to take them. Had we known as much then as we know now, quite a number would have been saved; for there were many queer, many charming seedlings among them.

I endeavored to cross the true pelargoniums upon the true geraniums, using *G. sanguineum* as the mother. We were delighted as we watched the formation of eight seeds—saddened when we found there was nothing in them—mere shells without embryos. I tried the potato on the tomato and failed.

The Alkekengi or strawberry tomato upon the potato produced one seed ball and four plants. These plants resembled potatoes in all ways save two, they never blossomed, and in the fall when the crop was harvested not one tuber—large or small—was found upon the underground stems.

Another interesting experience—though another failure—was with petunias. From abroad and at home we secured the best seeds procurable, selecting a large per cent of green margined strains. The best of these we crossed, which gave us the next year flowers which measured over seven inches in diameter. The corollas were deeply wrinkled and the green margins very wide. These were again crossed, though few seeds resulted. We watched over the several plants with a tender care full of hope to see, instead of flowers even larger than those of the year before, merely rosettes of green leaves without the rudiments of calyx, corolla, stamens or pistils. In this result there may be something homologous to the green rose, green apple blossoms, etc.

A cross of the Rose of Sharon (*Hibiscus syriacus*) upon *Hibiscus Moscheutos*—the Swamp Rose Mallow—gave us many seedlings which bore no resemblance to the Rose of Sharon, the pollen parent.

We worked for five or six seasons to improve the edible pea by crossing. The pea is self-fertilizing and it is necessary to cut off the top of the corolla as soon as it appears above the calyx and remove the anthers—nine in one bundle and one separate. Our first difficulty was to fix the crossbreeds. They varied indefinitely from year to year. Our next difficulty was that the pea weevils were so abundant that the crossed seeds failed to germinate or made a feeble growth.

For 14 years I have endeavored to change the old Tenn. white dent corn (re-introduced as Blount's) to one that would give twice as many ears to the stalk. The endeavor is still going on with little or no progress thus far. We are endeavoring to cross the renouée (*diervilla*) and honeysuckle (*lonicera*) with the bush and vine honeysuckles, the mock orange (*philadelphus*) and the deutzia, the smooth and prickly-fruited horse chestnuts, the catalpa upon the old trumpet vine, the currant and the gooseberry, the apple and the pear, the cherry and the plum—all in vain. Our grape crosses are interior.

Time admonishes me that unless I would leave you to think that all of our work in the way of crossing has resulted in absolute failure, I must hasten to tell you of some of our successes.

About 15 years ago we began crossing wheats. While engaged in this way it occurred to me to make the attempt to hybridize wheat and rye, the desire foremost in my mind being to effect something which had not already been effected by others. The result of manipulating and pollinating many heads was ten seeds, nine of which germinated and win-

tered safely. Eight resembled wheat in every way and the plants scarcely differed from the mother, which was Armstrong—a beardless variety. The ninth plant was peculiar in having hairy culms and long, narrow heads, of which there were about 20. And these 20 heads were so nearly sterile that they bore only a grain or so to the head. The other plants were all fertile, several of which were again pollinated with rye. It would take a long time to tell you the suggestive, instructive history of these plants. The rye plants which by blood are 15-16 rye. These were nearly sterile and all attempts to again cross with rye have resulted in absolute sterility. Some of 15-16 rye plants grow more fertile each year. Many of the 3rd rye are now fully fertile and so well fixed that we are propagating them for introduction, while three of the half-breeds have already been introduced. Many of the hybrids bear very large kernels, long heads with close spikelets. Some of them are as early as rye and perfectly hardy at my home. Thousands have been destroyed because of their conspicuous worthlessness.

Some years ago Prof. Wm. Saunders of Canada, told me he thought he had effected a cross between the raspberry and blackberry. We effected crosses the next season and every season since. The raspberry alone was used as the mother plant the first year. Some of the seedlings were raspberries in every way, some blackberries in every way, a few were intermediate. Whether an improved variety will come out of these remains to be seen. Thus far all that have been produced are imperfect berries, i. e., with from one to a dozen drupelets, while others bloom but do not set at all. Prof. Saunders' hybrids were from some accident destroyed before fruiting.

I may now speak of our hybrid roses. Let it be borne in mind that we have never raised a rose from any other seed than that borne by *Rosa rugosa*, the *Ramanas* rose of Japan. You all of you know it as very hardy, bearing leaves of exquisite beauty—thick, leathery, with a glossy wrinkled surface. The flowers are large, single, and in color white or pink. As yet we have used the first summer Harrison's Yellow, and that alone. This is a very hardy Austrian rose, with small leaflets, bearing semi-double flowers, yellow in color. Most of this batch of seedlings died from mildew. Only about thirty survived. When it is considered that *R. rugosa* differs from all other roses in such a marked way, one would naturally have supposed that its seedlings would be stamped with its peculiar characteristics rather than with those of the male parent, which may be said to resemble in a general way a hundred other roses. Such was not the case. Most of the seedlings resembled the male (Harrison's Yellow) in having small leaflets which were not of unusual thickness. The flowers were a yet greater surprise. All the single flowers are small, the colors being rose white, pink, dark pink. There were neither yellow nor pure white flowers. One bush bears small single flowers which are a feeble rose color around the edges, then white, and finally yellow about the base. Of the doubles, one bush bears pink flowers which are as "double" as a rose well can be. The leaflets show the *rugosa* blood plainly. Three others bear *rugosa* foliage. The flowers of two are semi-double, of the color of Gen. Jacq. The flowers of the third, which during the past year has been propagated for introduction by a leading nursery firm, are so nearly the color of Jacq. that they

can not be distinguished by color. The odor is also the same. It is as nearly a perpetual bloomer as is its mother *rugosa*. The leaflets, while preserving much of the thick, wrinkly texture, are larger than those of *rugosa*. Now, my friends, would you have guessed that the yellow Harrison's and the pink and single *Rosa rugosa* would have produced children that bear flowers so closely resembling in essential respects the Gen. Jacq.?

The next year we used pollen from hybrid perpetuans, and the next, as well as the present season, from yellow teas chiefly. Of these none that have bloomed are worthy of remark at this time. We have about 300 in all, while the present season has been specially favorable to an abundant harvest of hybrid seed. Probably we have no less than 3,000.

When the tempestuously hardy and distinct characteristics of *Rosa rugosa* are considered, you would suppose that the children of such a rugged mother would be healthy and strong. The fact is, however, that 9-10 die of mildew. It is worthy of remark also that not one seed in ten is viable. They are shells without embryos.

Finally, you have lately heard of "Child's Great Japan Wineberry." Though this is the *Rubus pheniceolacis* which has been in certain nurserymen's catalogues and in private collections for a dozen years, it is still a most remarkable raspberry worthy of a place in every collection. The forming berry is enclosed within the calyx-sepal which are covered with purple viscid hairs, like the bud of a moss rose. This protects the fruit from worms for all small insects are caught and held by the sticky exudation. As the berry ripens the sepals fall back. The berry, at first a bright, diaphanous scarlet, turns as it ripens to a rich ruby color. The berries are juicy and of a refreshing sprightly quality, with scarcely a trace of the peculiar raspberry aroma. Upon this we have succeeded in crossing both the blackberry and the rose.

Some Useful Foliage Plants.

Under the head of useful foliage plants quite a lengthy list might be given, as such a title allows of wide scope, but the object in the present instance is not merely to catalogue such plants, but rather to offer a few notes in the form of a reminder regarding some very serviceable plants for the general florist.

And first in the order of merit is *Pandanus Veitchii*, so well known as not to need any special description here, though its many good qualities seem to be better understood each year, and its use is correspondingly extended. In 3 or 4-inch pots it is admirable for dinner table-work or as a contrast in small ferneries, and to have pretty plants in pots of the sizes quoted it is necessary that small cuttings be used, and that the plants be given plenty of light so that the variegation will be clear.

Besides its value for general decorative purposes indoors, *Pandanus Veitchii* finds a good opening for outside work during the summer, either in vases or for sub-tropical bedding, though it is usually most satisfactory when so placed that it is shielded from the hottest of the afternoon sun.

Of course plants intended for such uses as this should be properly hardened off by means of free ventilation, before being placed outdoors, as otherwise the foliage will probably suffer from the exposure.

Another useful variegated plant, though of a very different type, is *Cyperus alternifolius* var., an old plant but a very

WREATH OF EARLY FALL FLOWERS

effective one, its graceful heads of narrow leaflets as well as their stems being more or less striped with pure white. Being a swamp plant, the cyperus naturally suffers from an insufficient water supply, and this condition should be carefully avoided else the ends of the leaves soon turn brown, and the beauty of the plant is spoiled.

The propagation of this cyperus is readily accomplished by means of division or by cuttings, the latter rooting in a short time if placed in a water tank in a warm house. Seeds also germinate freely, but as they invariably come up without variegation this method of increase is not an entire success.

Ophiopogon Jaburan var. is a plant that has not received any extended recognition among useful foliage plants, and yet it is easy to grow and decidedly pretty, besides being capable of withstanding much hard usage. It has narrow, graceful leaves from six inches to one foot in length and variegated with yellowish white, and the erect spikes of small purplish flowers are a pleasing addition to the plant. It succeeds in a temperature of about 50° and is propagated by division.

Another subject for which a variety of uses may be found is *Grevillea robusta*, the so-called Silk Oak of Australia, seedling plants of which are readily procurable and prove decidedly ornamental either for decorating or for bedding out in summer, the finely cut foliage having a very graceful effect.

This *Grevillea* is a rapid grower and in its native country sometimes attains a height of 100 feet, but this fact need not deter the florist from using it in a small state, as when the stock outgrows its quarters it is easy to throw it out and to bring on a fresh lot of seedlings.

There are also some useful plants to be found among the marantas, though many of the members of this family are too tender for general use. The very well known *M. zebrina* is already put to several different uses, and another that will doubtless be more used as its capabilities are better understood is *Maranta Bache-miana*, a dwarf variety introduced a few

years ago. The latter is of rather flat habit and has broadly-ovate dark green leaves which are marked with a series of dark chocolate blotches, the leaves being from three to six inches in length. *Maranta Bache-miana* grows well in light loam, and to give good service when used for house decoration the plants should be grown in an airy house during the summer, though requiring a moderate shade.

For mingling with small ferns in table ferneries or in other work in which moderate height is an object, *Aceris Japonica* var. will be found of much value, in fact it is already used in considerable numbers in arrangements of the character indicated above, and with good results.

Its prettily striped foliage and compact habit of growth make it a very desirable plant, the leaves ranging from four to eight inches in length. This plant is best grown in a cool house with plenty of light, thus keeping the variegation in good color, and like the other members of the Sweet Flag family, is naturally found in swampy ground, and in consequence enjoys liberal watering.

W. H. TAPLIN.

Wreath of Early Fall Flowers.

In response to numerous calls from florists in small towns for illustrations of simple, everyday arrangements as executed by the leading florists of large cities, we present herewith an illustration of a funeral wreath arranged by Mr. W. E. Doyle the Boston florist, in the latter part of August. It is not an elaborate piece but shows the prevailing style of arrangement among the florists of large cities at the present time.

The flowers used in this instance are hydrangeas, roses, lilies, tuberose, stephanotis, sweet peas and some other small flowers. At the bottom there is a background of common hardy ferns while *adiantum* ferns are freely used among the flowers. All the flowers set out well on long stems making the arrangement loose and graceful.

The wreath shown was arranged for a customer and was sketched by our artist just before its delivery.

Notes on Gladioli of Recent Introduction.

The California strain. In this we find no distinctive features whatever or any surpassing beauty. They are merely a good strain of gladioli (of *Gandavensis* section) raised from seed in California. The named sorts are not worthy of being grown, because they are far inferior to the named sorts of French and American varieties of to-day. In fact they are on a par with the French varieties of from 10 to 15 years ago, without the occasional variety of real merit which the French would occasionally send out many years ago, like Shakespeare, Meyerbeer, Norma, etc., etc.

Mr. Lemoine's usual number of named varieties of the Lemoine type show no exceeding merit, but show that he is running them in some cases very close to the *Gandavensis* type, and in time it will be very difficult to tell just where he leaves off and just where they begin. M. T. Vannier, Edison, Blaupreain are the best varieties of this year. Lemoine's new hybrid *Nancienis* section are distinct in type. It is well known that this is a cross between *Saundersoni* and the *Gandavensis* hybrids. They partake strongly of the habit of the *Saundersoni* type. The plant is taller and the stalk has the weeping tendency of the Lemoine and *Saundersoni*. The flowers are mostly set one above the other instead of two rows mismatching which gives a spike such a fine full appearance. The flowers also open similarly to the *Saundersoni*, only two or three flowers remaining perfect at a time.

Friedl, of Switzerland, also sent out a new hybrid with considerable gusto which he calls *Turicensis*. It is without any merit whatever. The color is a poor pink, and while you can see *Saundersoni* blood in it the flower is ragged and has no shape whatever.

Max Leichtlin sent out a few bulbs of a new species, "Echiton." They are very dwarf, growing not over eight inches high. The habit is very distinct and we hoped the flower would prove a novelty. While it is new it is certainly void of all beauty. About half an inch in diameter and an inch and a half long, of a speckled lavender color with white in the small tube or throat. Only two flowers opening at a time. It may be valuable to cross with, but it would seem almost a waste of time to commence on something so far down. Ville de Versailles is quite a free bloomer, coming in late. Flowers are a swiftness such substance, but are lasting a long time, a very pretty pure white, with bright blood red blotches in the throat. For bouquets, vases or baskets they are certainly beautiful. They would scarcely be recognized by the average person as gladioli.

The Argentuil class has proved very fine and grows better every year. The reports from Kew where it was grown in small quantities places it ahead of all others.

In the *Gandavensis* varieties nothing of extraordinary merit is to be seen. In fact for the last three years the new French varieties have run on an average poorer than they did some time previous to this. No sorts appearing during the last year or two equal to *Apricot*, *Neride*, *Mine*, *Auber*, etc. *Allatross* was put out as the latest and best white. The colors are off. All the flowers on the spike had a purplish pinkish tone, shape poor and habit bad. It is not as good as *Fleur de Lis* of some three years ago. This latter is rather a pretty gladioli, quite white with distinct violet strains and stripes.

OCCASIONAL.

Number of Blooms Cut.

Mr. Ernest Asmus, of West Hoboken, N. J., the well known grower of roses for the New York market, has favored us with the following very interesting data regarding the number of blooms cut per plant, from the varieties of roses noted during each month of the season of 1888-89, and has given us permission to use in our columns. The fractions are given in decimals. A general average, showing the number of blooms cut from each plant during the season is also given. The teas were all planted about fifteen inches apart on the benches.

* Thrown out. † Half thrown out May 1.

Below we give the general average for the season of 1888-89, from figures also supplied by Mr. Asmus, regarding which he writes: "You will find quite a difference in the production of some roses this season compared with that of last season. The reason is that I began cutting either later or earlier as the case may be. My whole season runs from July 1 to June 31, but some houses I don't begin to cut from until October and November, which was the case this season with Hoste and Mermets and some others, whereas Niphetos run through the whole season."

	Average per plant for season 1888-89.
Cusins	46.51
Watteville	46.38
Mermets	27.12
Niphetos	30.98
Brides	64.02
Perle	38.00

A Boston grower who wishes his name withheld has kindly sent us the following data regarding his clip for the season 1888-89, regarding which he writes: "All the roses were planted from 4-inch plants in shallow benches except one border of Bon Silences which have been in for years, and on border of Mermets and a few worked Perles. I have counted the Perles and Sunsets all together as we do not separate them when we sell them. The record is for flowers sold in the city at wholesale. To the figures given 10 per cent might be safely added for flowers used at home, and of which no record has been kept. The figures show the number of blooms cut from each plant during each month of the season, the fractions being in decimals.

Gen. av. 12.03 27.75

Below we give the average number of blooms cut from each plant at Mr. W. J. Gordon's rose houses, Glenville, O., a suburb of Cleveland. All the plants were young stock bunched in June 1889. In making comparisons of the general averages it must be borne in mind that this record covers only eight months while the others cover twelve. But the comparison of one variety with another in the same record is still equitable.

Gen. av. 5.02 4.82 3.47

As six varieties of roses are named in each of the three records, we are enabled to give general averages of the three records on those varieties. They are as follows: Bon Silences, 22.46; Perles 23.55; Niphetos, 30.09; Mermets, 21.35; Brides, 19.49; Gontiers, 21.88.

While the records vary greatly as to the average cut per plant from the same varieties it will be noted that in nearly every instance the comparative productiveness of the varieties, is approximately the same. One notable fact shown by these records is that with the large grower Niphetos is considerably more productive than Bon Silences, though the latter is popularly supposed to be the freest bloomer of the forcing teas. Of the six varieties noted as being on all the lists Niphetos stands at the head in two while Perle occupies that position in the other.

We have in mind many deductions of considerable practical value which may be made from these figures but reserve them for the time when we can obtain a larger number of records from which we may obtain a more general average. Will you do your share in supplying the necessary data?

Modern Rose Forcing Houses.

We present herewith views of rose houses constructed upon the plan now adopted by all large growers of roses for cut flowers when erecting new houses for this purpose. The illustrations will be of no interest to those who have visited the establishments of any of the large growers, but they will undoubtedly be very acceptable to the very large number of our readers who have not been so privileged. The houses shown were built by Thos. W. Weather's Sons, the horticultural business of New York city and were each 300x18½ feet.

Climbing Perle and Niphetos.

Will someone who has given the roses Climbing Perle and Climbing Niphetos an extended trial say whether or no they are profitable for winter forcing.

J. A. BALMER.

HAIR INSURANCE.—Parties remitting assessments to the treasurer of the Hair Association, should always enclose with remittance the regular notice received by them from the secretary, otherwise proper entry cannot be made.

EXTERIOR VIEW

INTERIOR VIEW

New Orchids.

CYPRIPEDIUM ARNOOLDIANUM.—New hybrid, artificial. *Veitchii* × *concolor*. Leaves four inches long by two inches wide, light green with hieroglyphic-like tessellation of dark green, stem five inches high, dark brown with white short down. Ovary six ribbed, slightly downy. Flowers large, measuring nearly four inches across the petals. Dorsal sepal nearly round, slightly recurved on the sides, lemon color at the base extending upwards. The veins are of vinous purple slightly shading over the ground color. The lower sepal is of the same color only the veins are not so pronounced. Petals two inches long, very broad, the inner portion lemon color while the outer portion is shaded with vinous purple; three fourths of the inner surface is covered all over with dark spots as in *C. Veitchii*. Lip is long with narrow opening, bright lemon yellow at the base with deep vinous purple veins and dottings in the upper part. The column is light green and the stamode, which is horse shoe shape, lemon yellow with purple border. This beautiful hybrid, which is well intermediate between the two parents, was raised at Short Hills in less than two years. This is the quickest time on record for *cypridiums*, and especially so if we consider that *C. concolor*, one of the parents of this hybrid, is a very slow grower. Another noteworthy fact is that this is the first distinct hybrid of American origin that was raised in an ordinary greenhouse open to the public in general, also that it was raised by a young man, Jos. Manda, Jr., whose age is less than the time it takes an average cattleya to flower from seed. This beautiful distinct hybrid is appropriately dedicated to Hicks Arnold, Esq., of New York City, an ardent amateur of choice orchids.

CYPRIPEDIUM INSIGNE NITENS.—This beautiful variety differs from the type by its very large bright leaves, long stems which reach sixteen inches in length, and the flower which measures five and one half inches across. The whole flower has a uniform yellowish tinge, while the large dorsal sepal which has a bright white margin is spotted with brown purple dots in irregular rows. This variety has a resemblance to the hybrid of the same name.

CYPRIPEDIUM LAWRENCEANUM VAR. PICTUM.—A distinct variety with remarkable dorsal sepal, which is narrow, pointed and recurved. One fourth of the area on each side is washed with rich vinous purple as if painted, and irregularly dotted all over with blackish warts presenting quite a new and distinct appearance.

W. A. MANDA.

Hail Insurance.

Members of the Florists' Hail Association who have not paid their assessment should remit at once, as the time for payment expires on October 20, after which date membership will be forfeited in all cases where the assessment has not been paid. Send your assessment blank with your remittance.

JOHN G. ESLER, Secretary.

Eucharis Amazonica.

Perhaps a few words on the culture of this plant will not be amiss, for it is when well grown a very useful plant for the florist, and will be found to excel everything for sweetness in the conservatory.

To have these plants in bloom during the autumn and spring months it will require a temperature of 65° at night, rising to 75° with sun heat in the day. Where this temperature is maintained syringing two or three times a day is advisable. The soil should consist of two parts of rich loam to one of leaf mold and decomposed cow manure with a little bone added, and about a quarter of the pot well drained will answer; if potted in this way it will not be necessary to do more than topdress the plants annually, repotting only once every three or four years. When the plants are growing vigorously liberal supplies of tepid liquid manure and an occasional dressing of artificial manure will help them wonderfully to put forth their beautiful white flowers. It is necessary that they should have a partial rest during the summer months, keep them in a cool and shady place; in fact, always keep them shaded from the sun, as it will surely parch the soft foliage of these plants. If this course is taken with old established plants they will bear at least two crops of flowers every year.

PETER MACDONALD.

Summit, N. J.

Long Island Notes.

BY WM. FALCONER.

JUDGING from the large quantity of unsold flowers I saw in New York the other day, it is more how to get rid of flowers than how to increase them that would seem to most concern us.

PYRETHRUM ULIGINOSUM was in its finest condition about the middle of September. A hardy perennial, extremely free flowering and easily raised from seed or division. Acting on advice given in an English paper I cut back some of our plants after they had grown a foot or more high. This treatment dwarfed them, but otherwise did not benefit them any.

The plain white Japanese anemone is the best of the species, and both beautiful and desirable and now in fine condition. The drenching rains we have had recently have stained the outside flowers, but those under the shelter of sashes are unmarred.

CLEMATIS STANS.—After *C. Davidiana* and *C. tubulosa* both are past now comes this handsome hardy plant in full bloom. Its flowers are bluish white, small, fragrant and abundant. This is a hardy perennial of sterling merit.

DELPHINIUM GRANDIFLORUM.—A second crop is now in fine condition and fuller than that of any other species. The single ones only are worth bothering with. The double ones are pretty but milky, and the semi-doubles poor in kind and color.

CELOSIA PLUMOSA, or feather cocks-combs raised from seed sown May 28 are in fine condition now and vastly better than those raised from March sowings.

SCABIOSA from early spring sowings and which were cut back after their first flush of flowers was over are blooming well again, but the best crop is being borne by sowings made during the first week of June.

HELENUS AUTUMNALE is a tall yellow-flowered but handsome perennial for the border. It keeps in good bloom for 8 or 10 weeks. A much dwarfier form is called

nannus; in flowering, freshness and fullness it resembles the typical tall one. It is sometimes sold as *Corocopsis precox*.

SALVIA FARINOSA is a neat species with lavender blue flowers and very generous in bloom. It is not hardy here. Although a perennial we treat it as we do *S. splendens* or *S. coarctata*, namely, always raise our fresh stock from seed. *Salvia Pichei* also a perennial but barely hardy is now in fine bloom, so too are the blue, lilac and white forms of *S. patens* raised from seed last spring.

Although *Aster levis* is a common wild species it is one of the handsomest of garden flowers.

DESMODIUM PENDULIFLORUM is in its heyday in September. Although of subshrubby nature we cut over ours close to the ground every year as one would a pilox or larkspur, and this treatment suits it best. The clumps are now six feet high, more than this across and a solid shower of reddish-purple pea flowers. Of no use for cut flowers, but very desirable as a garden plant. The white-flowering form is commonly known as *D. Japonicum*, and although beautiful and desirable in its way is not as free and airy as the *penduliflorum*. Botanists give us *Lepedeza bicolor* var., as the proper name of these *desmodiums*.

SUMMER SOWINGS of *Corocopsis Drummondii* and *C. coronata* are in very gay bloom just now. I have succeeded in getting some quite striking hybrids between these two species. The habits of the hybrids usually lean towards *Drummondii*, but the blossoms are often very intermediate. They do not yet come always true from seed, but the varietal nature is not quite fixed enough.

AND BETWEEN *Rudbeckia bicolor* and *Lepachys pulcherrima* plants have not some very curious and pretty hybrids. The habit leans to the *Rudbeckia*, the flowers are every which way.

COXICLINUM COLLESTINUM or mist flower is an ageratum-like perennial indigenous to the south, and hardly here if mulched in winter. It is now in gay bloom and quite pretty. Very easily increased from seed or division of the roots.

The continuous rainy weather about the middle of September killed some hardy plants and partly destroyed many others. It rotted off both roots and leaves. In low heavy ground the destruction was greatest, in well drained sandy land, least. This teaches us how important it is to have our nursery grounds so arranged and prepared that water can not lie about them anywhere. Where the land is level and heavy it is well to raise and roll the nursery beds enough to readily shed the water into the alleyways between them.

ROSA MITIS is a wild rose indigenous to swamps from Newfoundland to Massachusetts, and rare in cultivation. It grows from two to three feet high, has very glossy leaves and mossy-prickly stems. It is now laden with round bright scarlet fruit which is very ornamental and so persistent as to remain upon the bushes over winter and till next spring. It keeps its foliage late into the fall and the leaves color up very brightly in autumn. Although it is an inhabitant of swamps it takes root in garden cultivation and spreads considerably at the root. This together with *Rosa rugosa* and *R. rubrifolia* have now the fullest and brightest crop of ornamental fruit. A little later on *R. lucida* will also show up prettily and so too will the polyantha roses, especially the one called *simplex*.

CYPRIPEDIUM ARNOLDIANUM

HELIANTHUS MAXIMILIANI is now (Oct. 4) in fine bloom and it will probably continue in good flower till towards the end of the month. In moderately mild localities, as this is, it is a very desirable and showy plant, and especially valuable for its late blooming nature. It grows from seven to ten feet high and its long stems are terminated for two or three feet with bright golden yellow flowers set in close to the stem. The species is a native of the plains and prairies west and southwest of the Mississippi, and although not generally regarded as being perfectly hardy in the north we find it hardly enough here. Very easily increased by division and root sprouts in the same way as is *H. multiflorus*.

Philadelphia.

Roses are more plentiful and of better quality. Prices (wholesale) remain very low.

Business is still moving in the right direction. Coles & Whiteley are cutting some fine *La France* as well as other popular kinds of roses.

The Rowlandville Evans' are bringing in some good American Beauties. So also are Griffin's of Frankford.

George Anderson is cutting little or nothing yet. This time last year he was cutting large quantities. He thinks he ruined his winter's crop by so doing, and that is the reason he is picking buds off now, instead of cutting flowers with long stems. It is to be hoped that George will have better luck this winter than he had last.

C. D. Ball has given up growing roses entirely, as they were very unsatisfactory the past few seasons. He now devotes his whole place and attention to growing palms, ferns and plants of a like character.

H. A. Dree's big establishment at Riverton is a model of neatness and system, yet roses, carnations, etc. do not do well there. Palms, ferns, etc., luxuriate in fine health and may be found there in great abundance.

John Burton has not commenced cutting roses yet, and his neighbor Edwin Lonsdale is cutting very few. Mr. Burton is heavier in hybrids this year. His success last season was remarkable. Even the crops of the great growers for the New York market were no better and in some cases they were not so good. What he depends upon for main crops are Bruner, Laing and Luizet. He has a house 150 feet long of American Beauties which are exceedingly fine, no signs of black spot. The foliage is a beautiful dark rich color. Look out for some prime flowers from this establishment this winter. There is also a fine house of Woottons here. This much abused rose was one of the best paying varieties Mr. B. had last winter. Now, when it comes to palms, the largest and finest areas in the country are to be found here. The way John stole a march on the old palm growers is a matter for congratulation.

Thomas Butler, of Chestnut Hill, has built a rose house and a carnation house each about 50 feet long, which are to be heated by steam.

Craig & Bro. have built a new rose house on the May pattern in which are planted nearly all the standard winter flowering sorts. The older rose houses look promising. Mr. Robert thinks well of *Mme. Hoste* and *Duchess of Albany*. The number of *adiantum*s here are uncountable. They never had so many before, and they are in excellent condition. Palms still remain a leading feature at this most popular establishment. Sizes from the tiny seedling to the graceful specimen may be found here in all the well known varieties. Tuberous rooted begonias and gloxinias are to be made a specialty for next winter to be sold mainly as pot plants in bloom for window and other decorations, for which purpose we are assured they are admirably adapted.

It is said that C. H. Grigg will again tempt Dame Fortune in the flower business. He expects to open in time for the busy season.

If Madame Cusin will be wanted this winter there will be lots of them, judging from the number planted.

Will pink be the fashionable color next winter? Some predictors who make a study of such matters say no.

The bowlers who represented this city in the contest at dear old Boston, have been challenged to roll a match of ten pins with a carefully selected team which has systematically been practicing for these many weeks. The practice has been so thoroughly and persistently carried on and the outcome is so satisfactory that the result is a foregone conclusion. This will be news to some people because at one time it did look as though a team could not be secured to compete at Boston, and this match is brought about to prove that a grave mistake was made in the selection of the component parts of that team.

Robert Craig is being congratulated on all sides since he bought 30,000 bushels of coke from the city at 3 cts. per bushel, excepting by those who are just a bit nervous lest they will not be able to get their regular supply. It was a grand stroke of business—a saving of fully 50 per cent on next winter's fuel.

John Thorpe and J. D. Raynolds were in Philadelphia last week.

Chrysanthemums! Well, if it's *chrysanthemums* society wants there'll be lots of 'em and good 'uns too. Never were preparations more completely made to supply the Quaker city with good cut blooms than there has been this year.

It is gratifying to note in the Boston news of last issue that a full representation of the boys from Boston will be here at our *chrysanthemum* show. We'll try to make them and all the fraternity who will take the time and trouble to pay us a visit. WELCOME. E.

Montreal.

The annual exhibition of the Montreal Horticultural Society was held in this city September 23-26 at the Victoria Rink. There was a grand display of plants and flowers, the entries being more numerous than ever before, and the quality being above the average. A table of orchids exhibited by Pitcher & Manda, of Short Hills, N. J., was the finest display of these flowers ever seen in Canada. The exhibit was not entered for competition but was awarded a diploma. A seedling begonia exhibited by A. Pinoteau was also given a diploma. A special diploma was given to Colin Campbell for a dinner table decoration.

In place of first premiums were awarded to W. Wilshear for collection of decorative and flowering plants, table 50 feet, foliage begonias, twelve distinct species of ferns, bromeliads, six distinct varieties of palms, collection palms; to W. Spriggins for collection of decorative and flowering plants, table 75 feet, collection *adiantum*s, six gloxinias in bloom, hanging basket, vase of plants and selaginellas; to J. Stanford for specimen *adiantum*, *cladium*s, six fancy *cladium*s, six coleus, six crotons, six dissimilar dracaenas, six distinct species of ferns, marantas and collection stove plants; to F. Logan for tuberous begonias; to W. Bendon for distinct varieties of begonias; to S. Ward for three dissimilar crotons, gloxinias and greenhouse plants; to I. J. Kirkwood for specimen cypripis; to J. Betrix for tree fern; to Geo. Trussell for zonal geraniums, double geraniums, bronze and tricolor geraniums; to J. Walsh for ficus, *Lygodium scandens* and plants for table decoration.

In cut flowers etc. first premiums were

awarded to W. B. Davidson for annuals, double petunias, tea and noisette roses, verbenas, two hand bouquets, four corsage bouquets and collection newest roses; to J. B. Goode for asters—12 blooms, zinnias—12 dissimilar blooms, Phlox Drummondii and collection asters; to W. Bell for collection double dahlias, pompon dahlias and zinnias; to D. F. Bell for twelve varieties double dahlias, single dahlias, single petunias, six dissimilar begonias, dahlias and six spikes gladioli; to J. Eddy for collection dianthus and Phlox Drummondii; to A. Joyce for twelve spikes gladioli, eight spikes gladioli and vase of cut flowers; to E. J. Maxwell for twenty-four dissimilar pansies and twelve dissimilar blooms pansies; to B. F. Graves for perennial phlox; to G. Trussell for zinnias and vase of cut flowers; to J. Kirkwood for hand bouquets; to T. W. Burdon for decorative and flowering plants, abutilon in bloom, begonias, two begonias, six exotic ferns, foliage plants, three fuchsias, specimen fuchsia, double geraniums, single geraniums, heliotrope, double petunias and six dissimilar blooms double petunias; to P. A. Somerville for rex begonias, hanging basket, Lycopodium and basket of cut flowers; to T. Gardiner for hydrangea and ivy; to Sergt-Maj. Phillips for collection asters, six spikes stocks and twelve blooms verbenas; to Jessie S. Maxwell for hand bouquet and vase of cut flowers; to K. Jack for collection cut flowers; to J. F. Smith for six dissimilar blooms of pansies.

Hamilton, Ontario.

At the Great Central Fair held in this city the latter part of September there was an excellent display in the department of plants and flowers.

For plants first premiums were awarded to F. G. Foster for twelve greenhouse plants, new and rare plants, coleus, foliage plants, exotic ferns, collection of ferns, flowering begonias, foliage begonias, tender roses in pots, display of plants distinct from other entries, double geraniums and tuberous in pots; to Jas. Rowe for six greenhouse plants, fuchsias in bloom and hanging basket; to A. Reid for cockscombs in pots; to Geo. Anderson for foliage plants; to Wm. Hunt for tuberous begonias and caladiums in pots; to John Morley for single geraniums, tricolor geraniums and scented geraniums; to Alex. Sinclair for variegated or bronze geraniums and carnations in pots.

For cut flowers first premiums went to Jas. Ogilvie for collection of annuals; to Thos. O'Veale for asters, collection asters, three of each color, bouquet of everlastings, flowers, collection dianthus, six varieties of hollyhocks, twelve varieties of pansies, largest and best collection of pansies and collection sweet peas; to A. Terryberry for six varieties of asters, pompon dahlias, six varieties of gladioli, six varieties French marigolds, six varieties pansies, collection Phlox Drummondii and largest and best display of cut flowers correctly named; to Jas. Rowe for table bouquet, hand bouquet, hybrid bouquet, twelve varieties perennial phlox, basket cut flowers and flat design in white flowers; to John Morley for button hole bouquets and balsams; to A. Reid for twelve standard varieties of dahlias, six standard varieties of dahlias, pompon dahlias, collection of dahlias, single dahlias, largest collection gladioli, double petunias, single petunias, any one variety of roses and collection of double zinnias; to J. L. Harper for twelve varieties dianthus, six varieties African marigolds, stocks, twenty-four varieties verbenas and twelve

varieties verbenas; to Geo. Anderson for collection hollyhocks; to F. G. Foster for twelve tea roses; to John Gardner for hybrid remontant roses.

Boston.

The cut flower market remains dull, the supply of roses being in excess of the demand and consequently low prices still prevail. Quality is improving, however, and much of the stock now coming in is very good.

There are a few American Beauties seen, but these are not yet up to average quality. Wattle-villes seem to be much more generally grown this year than heretofore, and the prospects are that Gontiers will be largely in excess of last season.

Carnations, especially white, are in brisk demand at fair prices, but the white asters still stand in the breach and keep figures from going very high. An occasional spray of chrysanthemums is to be seen in the florists' windows. Violets are beginning to come in, but quality is only medium. Lily of the valley has been in good demand and somewhat scarce. Orchids are being called for from all directions, but there are none to be obtained. Smilax is in good supply, adiantums are abundant and good, Asparagus plumosus is also of excellent quality, and tuberous are very abundant. Outdoor flowers have suffered more from frequent rains and heavy dews than from frost, there having been but one frost yet in this vicinity that has done any injury, and that quite slight. Even colouses in favored spots are still quite bright.

A beautiful exhibition of cultivated native asters was made at Horticultural Hall on Oct. 4, by Geo. Hollis. There were in the collection fifty species and varieties, some of them not rare.

The annual meeting and election of officers of the Mass. Hort. Society took place on Oct. 4. The greater number of last year's officers were renominated and these were all re-elected with the exception of ex-president Walcott who was defeated for the executive committee. Mr. J. F. C. Hyde being elected in his stead.

At the October meeting of the "Gardeners' and Florists' Club" the newly elected president, Mr. L. H. Foster, made a pointed and instructive address. He counselled wise and judicious management of the club's finances with a view to the possible attainment some time in the future, of a permanent home.

The condition of the club financially and numerically is excellent, and its prospects are exceedingly bright.

W. J. S.

Chicago.

A charter has been secured from the Secretary of State for the "Horticultural Society of Chicago," and a call has been issued for a meeting to complete the organization.

Subscriptions for the Chicago Flower Exchange are rapidly accumulating. The amount of stock apportioned to each one is small, it being desired to have every one of the Chicago market take at least one or two shares so that every one will have a voice in the management of the exchange.

The attendance at the weekly meetings of the Florist Club is large and the members are lending themselves with a will to the work of making the coming exhibition an improvement over the last one.

The plan adopted last year of selecting judges of floral arrangements from among the ladies who are the best patrons of the florists will be pursued again this year. Last year the awards were in the main

well made and the interest developed among the people whom it is most desirable to interest in the exhibition, by the selection of judges from among them was of very material value to the club and to the trade in this city.

The coming exhibition will be held at the Second Regiment Armory, on Michigan Ave., the same building in which the last exhibition was held. The complete premium list is being printed and will be mailed to all interested in a few days.

Mr. Paul Berkowitz of H. Bayersdorfer & Co., Philadelphia, was in Chicago last week in the interest of his house.

The Committee on Classification of the exhibits at the World's Columbian Exposition are at work, and we will soon know what provisions have been made for Horticulture at the great exhibition of 1893.

Mr. J. D. Reynolds, president of the Florist Club, made a flying trip to Washington and Philadelphia last week.

Mr. H. A. Bunyard, representing the United States Nurseries, Short Hills, N. J., visited the trade in Chicago recently.

St. Louis.

The Exposition management offered \$1,500 in premiums for displays of plants and flowers on September 29 and 30, the two evenings devoted to floral exhibits.

On the first night the awards were for groups of decorative plants and for parlor decorations.

Prizes amounting to \$400 were awarded for the groups and prizes amounting to \$225 were given for parlor decorations. The judges were the florists themselves, each man voting on every display except his own and the awards were made according to the number of points scored.

The awards were as follows: For groups of plants—Schray first award, scoring 82 points; Waldbart, second award, 72 points; Ellard, third, 63 points; Juengel & Sons, fourth, 56 points; Jordan, fifth, 46 points. For parlor decorations the awards were: Ellison, first, receiving 89 points; Jordan, second, and Ellard, third, only three florists competing.

The second night the competition was in floral arrangements.

For table decorations the awards were as follows: Ellison, first, receiving 92 points; Jordan, second, receiving 72 points; Ellard, third, 71 points. The sum of \$175 was distributed among the three contestants according to the proportions of their points.

For best floral design, Ellard Floral Co. stood first, receiving 84 points; Ellison, second, 80 points; Jordan, third, 72 points. Seventy-five dollars was distributed among these three contestants.

For basket displays, Ellison stood first, receiving 75 points; Jordan, second, 72 points; Juengel, third, 61 points. Seventy-five dollars was distributed.

For bouquet, Jordan stood first, receiving 76 points; Ellison, second, 73 points. Fifty dollars was distributed.

Springfield, Mass.

The fall exhibition of the Hampden County Horticultural Society was held at Union Armory, Springfield, Mass., September 23, 24 and 25, and, although the attendance was not large, it was a very creditable show. This was the fourth exhibition here this season which betokens the widespread activity in such channels. This display has been especially in the vegetables and fruit commonly de-

nominated "garden sass." The flowers and plants were much better than have ever been shown here in the past.

The following were the professionals exhibiting: L. W. Goodell, Pansy Park, Dwight, Mass., who took five prizes and showed verbenas, marigolds, zinnias, Euphorbia heterophylla, calliandras, gladioli, dahlias, Phlox Drummondii, petunias, nasturtiums, Japan pinks and fourteen varieties of aquatic plants, including a leaf of Victoria regia, H. P. Hart, Brightwood, Mass., two prizes, dahlias, Miller Bros., Springfield, Mass., three prizes, an inclined cross of Perle roses resting on a base of ferns and lilies of the valley set off by a cluster of Gontiers, hand and vase bouquets, cut roses, cut carnations in variety, large basket of cut flowers, palms, bulbs and requisites. A. B. Howard, Belchertown, Mass., four prizes, helianthus, petunias, lilliput zinnias, verbenas, asters, marigolds and seedling grapes. Mieliez Horticultural Co., Springfield, Mass., four prizes, eyecads arranged on an immense rockery and cut roses. Gale Floral Co., Springfield, Mass., four prizes, an anchor of red and pink roses reclining on a cross of lilies, on a base of lycopodium, a bride's basket, hand and vase bouquets. N. J. Herrick, Springfield, Mass., one prize, bulbs, and a large collection of ferns, palms and ornamental plants. J. W. Adams & Co., Springfield, Mass., trees and fruit. Dexter Snow, Chicago, Mass., one prize, a floral Odd Fellows' link on a standard, a miniature carpeted bed of alternantheras and ferns. J. Atkins, Springfield, Mass., one prize, dahlias. B. L. Bragg & Co., Springfield, vegetables grown on their seed.

Although there was about an even number of professionals and amateurs exhibiting the amateurs took the most prizes.

ALFRED B. COPELAND.

News Notes.

SAN DIEGO, CAL.—A chrysanthemum fair will be held in this city the first week in November.

ATCHISON, KAN.—E. C. Schwein is reported to have sold out his florist business in this city.

SPRINGFIELD, MASS.—The Hampden Hort. Society will give a chrysanthemum show in this city Nov. 13 to 15 inclusive.

JACKSONVILLE, FLA.—The Florida Sub-Tropical Exposition will open in this city about the second week in January. A special feature will be the displays of tropical and sub-tropical fruits and flowers.

WATERBURY, CONN.—Alexander T. G. Dallas, son of Alexander Dallas, the florist, died recently aged 17 years. He was a promising youth and his father's friends in the trade will be grieved to hear of this bereavement.

CINCINNATI.—The committee from the city council and the trustees of the late Mr. Mary Howard have agreed to locate the new flower market in the square on Sixth street between Elm and Plum, the old hay market.

TROY, N. Y.—Florist Louis Menand made a magnificent display at the N. Y. and N. E. Fair which closed October 1. His display occupied three tables extending nearly the whole length of horticultural hall and contained a host of rare and beautiful specimen plants.

LOUISVILLE.—The florists of this city had a tremendous rush of business on ac-

count of the Satellites' ball held the evening of Oct. 2. Though large lots of flowers had been received by express from other cities in addition to the home supply they were unable to meet the enormous demands made upon them.

BUFFALO.—A chrysanthemum show will be held at Music Hall, November 13 to 15, by the Buffalo Florists' Club. A liberal list of premiums is offered and the enthusiasm of the members of the club augurs well for the success of the exhibition. Entries in all plant classes close November 7, and in classes for cut flowers and floral arrangements on the 10th.

MILWAUKEE.—Messrs. Currie Bros. and G. W. Ringrose were the only competitors in the class for professional florists at the recent fair. Currie Bros. took first premiums for best floral design, best basket, best collection of cut flowers and best bouquet. Mr. Ringrose taking second in same classes. In the remaining ten awards seven first and three second prizes went to Currie Bros., and three first and seven second to G. W. Ringrose.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED.—By gardener on private place, German, age 30, married, one child. Address: CHAS. BICKEL, West Park, N. Y.

SITUATION WANTED.—By a young German on commercial place, roses, carnations, 15 years experience. Address: N. Z. care American Florist.

SITUATION WANTED.—By a thorough plantman and propagator, either private or commercial. Address: C. J. STEVART, 67 Bromfield St., Boston, Mass.

SITUATION WANTED.—As gardener, private or commercial, posted in all branches, 30 years experience. English, married, age 35. Address: G. S. F. O. box 18, Merrick, Mass.

SITUATION WANTED.—By practical man of 18 years experience in growing cut flowers and plants on commercial place. Address: L. G. care American Florist, Chicago.

SITUATION WANTED.—On either private or commercial place until Nov. 1 near Philadelphia. Baltimore or New York; good references. Address: J. F. 1201 Frankford Road, Philadelphia, Pa.

SITUATION WANTED.—By an energetic young man, who resigned his last place in one of the leading English nurseries; wages not so much an object as the right kind of experience. Address: BOOL, Ithaca, N. Y.

SITUATION WANTED.—By a practical florist German, no children, on a private place, 15 years experience in this country and Europe; good references as to ability and character. Address: CARL GEBHARDT, 150 W 2nd St., Chicago, Ill.

SITUATION WANTED.—By a young married German, no children, on a private place, 15 years experience in this country and Europe; good references as to ability and character. Address: CARL GEBHARDT, 150 W 2nd St., Chicago, Ill.

SITUATION WANTED.—As manager, have been 10 years an establishment in the horticultural line where are some of the finest roses, etc. ever grown in Illinois. Very highest testimonials. Reason of leaving solely for better position. Address: A. M. care American Florist, Chicago.

SITUATION WANTED.—As foreman, can turn to any kind of work, accustomed to steam and hot water, reticulate fine and coarse (e-timons) for propagating and knowledge of orchids, rose growing etc., also general running of a large business, 10 years experience. Address: A. C. care American Florist.

SITUATION WANTED.—As propagator, etc., very quick, accustomed to handle all kinds of one of the largest places in the east, rapid at potting, mailing, etc., 20 years experience, very highest references; been employed in the largest places in Austria, England and France. Desiring to change solely to better circumstances. Address: R. S. care J. C. Vaughan, box 68, Chicago.

SITUATION WANTED.—By a practical gardener German, as head or foreman; competent in all branches; private place preferred. Has been 10 years generally, cut flowers, fruit, vegetables, also tropical plants, laying out choice flower and vegetable gardens, 20 years experience, age 36, married, good sober steady German. Address: G. M. care American Florist, Chicago.

WANTED.—A good florist and gardener. Address: WILSON & Co., Shreveport, La.

WANTED.—Wholesale price lists plants, bulb etc. GRIZZELLE & Pont, Victoria, B. C.

WANTED.—Gardener for fire steam boiler, also good greenhouse and garden. HENRY DREER, 51 Benie street, Memphis, Tenn.

WANTED.—A competent rose bud grower and manager of greenhouses; good salary for a good man. Address: L. Letter carrier, Louisville, Ky.

WANTED.—A single young man for general greenhouse work, also a horticulturist, steady plants and cut flowers, give references, state salary required. Address: ALBERT R. BALE, Kansas City, Mo.

WANTED.—An active, experienced assistant in greenhouse and flower garden and good rose grower. May be put in charge of cement. Wages \$25.00 and board. References required. No drinking man need apply. Address: W. H. CASSELL, Box 85, Canton, Miss.

WANTED.—Nursery foreman, an active, energetic man, American or German, married, temperate; thoroughly acquainted with all branches of the nursery business, a competent proprietor of ornamental stock, and a good manager of men. Apply with reference to: THE W. H. MOON CO., Morrsville, Bucks Co., Pa.

WANTED.—PARTNER.—In the nursery and florist business, a practical man with not less capital than \$1000. To such a person a position is now offered which will afford him a handsome return. Location can not be beat in America; splendid grounds, well cultivated, and a large trade directly in the city of London Ont. and on the road to the great centers of the Empire. Address: GEO. BUCHETT, St. James Park Nurseries, London, Ont.

FOR SALE.—600 feet of 4 inch pipe, one expansion tank, 8 branch tees and 8 elbows. Cheap for lots. H. C. CUNNINGHAM, Delaware, Ohio.

FOR SALE.—Two handsome solid cherry florists' and 8 ft. high, 11 ft. high, 8 ft. long, 8 ft. wide, and 8 ft. high, 11 ft. long, 8 ft. wide, cut \$25.00 and \$40.00 will sell for \$25.00 each, also two large mirrors, cost \$30.00 will sell for \$25.00 each. Address: FOREST GLEN FLORAL CO., 307 Lake St., Chicago.

FOR SALE.—A florist establishment, one greenhouse (5x15), and two 5x10 feet each, heated by hot water (Weathered); 5 acres of good land, some wood and pasture, plenty fruit, dwelling house, barn and other buildings, all well and in good order. All buildings new and in good order. One hour from New York City and one mile from depot. Price, \$4,000 or will sell the greenhouse proper for \$2,000. Address: F. O. Box 105, Ramsey, N. J.

WANTED.—300 CAMELIAS. Double White, Double Pink, and Double Variegated. Mailing size. Address with price. John A. Salzer Seed Co., La Crosse, Wis.

A BARGAIN. A WELL ESTABLISHED Florist Business for sale. Four houses, well stocked and equipped. For good reason, even at a sacrifice. Growing Ohio city of 25,000 inhabitants. Large trade with surrounding towns. Address: OPPORTUNITY, care Am. Florist.

FOR SALE. Good Stock Healthy VIOLETS MARIE LOUISE and SWANLEY WHITE, Dble.

The above clump, 100 plants, \$1.00 per 100. Fine plants transplanted. 1.00 per 100. 12% off on 500 plant orders. Cash must accompany orders from unknown parties.

M. TRITSCHLER, NASHVILLE, TENN.

TRY DREER'S GARDEN SEEDS

Plants, Bulbs, and Requisites. They are the best of the lowest prices. TRADE LIST issued quarterly, mailed free to the trade only.

HENRY A. DREER, Philadelphia

GLADIOLUS BULBS.

Prevailing Colors, Pink and White.

Over 100 named varieties, and a number of choice seedlings, all raised in this collection, has never been culled, and it has received a number of first premiums in each of the last three years when exhibited. To avoid retailing these bulbs, I offer them this fall at \$10.00 per 100 for first size, second size \$8.00. A quantity of small bulbs and bulbets at a bargain.

M. CRAWFORD, Cuyahoga Falls, Ohio.

200,000 PEAR SEEDLINGS, 2 years old, raised in South Germany, for sale, at \$10 per 1000. Immediate order secures the bargain. The stock is the best ever seen.

Martin Ernst, VINELAND, N. J.

American Grown Gladioli.

Mr. W. W. Watson, assistant curator of the Royal Gardens at Kew, England, says in a letter to *Garden and Forest*, September 10, 1890:

"A bed of seedling gladioli, comprising some half dozen kinds now flowering finely at Kew, is attracting much attention because of the extraordinary size of the plants, and the size and rich colors of the flowers. They were obtained from Messrs Hallock & Sons, Queens, N. Y. Some of the spikes are fully six feet high and well furnished with flowers, all of them larger than any gladioli I have seen, whilst the colors are brilliant as well as variable. They are superior in size of flower and robustness of plant to the best productions of European growers."

Geo. Jackman & Son

Beg to offer a large and well grown

Stock of the following:

- ROSES**—In choice and exhibition varieties.
RHODODENDRONS—Of the best named sorts, and Hybrid Seedlings well set with buds.
AZALEAS—Good named sorts, also Mollis and Ponticum set with buds.
CONIFERS—In large collection.
SHRUBS—Ornamental and Flowering.
FOREST TREES—Of sorts, all grown by thousands.
CLIMBERS—In variety, including their celebrated Climatic.
STOCKS—Fruit and Manetti, fine.

Catalogues free on application.

TERMS—Cash with order, or satisfactory trade reference from unknown correspondents.

**WOKING NURSERY,
WOKING, ENGLAND.**

**ZIRNGIEBEL'S
NEW GIANT MARKET AND FANCY
PANSIES**

Have been exhibited everywhere and admitted to be the finest strains at the present time.

"Huge jewels of velvet and gold."—Boston Transcript, May 10th, 1890.

Trade packages of 1,500 and 500 seeds respectively, at \$1.00 each. Full printed directions for the proper cultivation of these pansies with each package of seeds.

IN ANSWER TO MANY INQUIRIES:

We have no seed of Giant Fancy Pansies to sell by weight, being too scarce and high. Wherever our stock every season, from seed obtained direct from Messrs. Bugnot and Cassier, at the rate of thirty and twenty dollars per ounce, respectively (with a limited supply), as we consider their seed to be the cheapest, quality considered. We do not handle any other.

**DENYS ZIRNGIEBEL,
NEEDHAM, MASS.**

Mention American Florist.

**NEW SEEDLING CHRYSANTHEMUM
"ORANGE BEAUTY"**

This novelty has been in bloom with us last year from September until June and is now in full bloom. We can supply fine plants in 2 1/2 inch pots at \$1.50 per 10 plants, or \$10 per 100. Also a large stock of Grand Duke Jasmine, 2 1/2 inch pots, \$3.00, and 3 1/2 inch pots, \$7.50 per 100. Jasmine multiflorum, 2 1/2 inch pots, \$2.50 per 100. Bouvardia Boeckl and Cleveland, 2 1/2 inch pots, \$3.00, and 3 1/2 inch pots, \$4.50 per 100. Allapanda Hendersonii, from 2 1/2 inch pots, at \$7.00 per 100. From 3 1/2 inch pots, strong plants, \$1.00 per dozen, or \$20.00 per 100.

Terms, cash with order or satisfactory reference.

PANSIES.

A FEW POINTS TO CONSIDER.

QUALITY

the important feature in pansies is well taken care of in my strain; in fact so well that many of my customers say there are no better ones. Those who bought a few hundred on trial last season are placing their orders now for a fully supply.

THE PLANTS

are nice stocky seedlings that can be mailed or expressed safely long distances and at a moderate cost. Samples will be mailed for 10 cts.

QUANTITY

I can furnish them in any number, 100 or 10,000, all from the same beds and same seed. A trial order is respectfully solicited.

PRICE

Free by mail 100, 75 cts.; 500, \$3; by express 500, \$2 50; 1000, \$5; 2500 and upward 10 per cent discount.

L. B. 338.

ALBERT M. HERR, LANCASTER, PA.

MAMMOTH PANSIES

From finest strains of the most celebrated growers of Europe and America.

GIANT TRIMARDEAU, LORD BEACONSFIELD,

EMPEROR WILLIAM and others mixed.

Price, \$3.00 per 1000. Very fine mixed, \$5.00 per 1000.

THE AMERICAN FLORIST CO., Chicago.

COST OF PRODUCTION.

Mr. Chitty's comments regarding the cost of growing geraniums in his greenhouses again brings to mind the great importance, the absolute necessity, of every grower being able to determine what his plants and flowers cost him to produce. The time for groping in the dark in this matter has passed, and those who continue to depend upon guesswork in deciding what stock is profitable and what is not, will soon be drifting upon financial rocks if they have not already unknowingly done so. As competition sharpens prices are reduced. Have you already touched cost, are you merely close to the danger line or have you plunged below? Are you making a profit on all the stuff you market or are you carrying a loss on one line of stuff by a liberal profit on another line? Where are you? If you do not know just where you stand, if you can not positively say what profit or loss you are making in each department of your business then you are drifting and sooner or later you will surely drift against the rocks.

In our department of roses in this issue will be found several records of blooms cut from each plant of certain varieties, during each month of the season, by different growers, which are worthy of a careful study. While these figures can hardly be accepted as conclusive they are full of suggestions, and could similar records be obtained from a large number of growers a digest of the whole would be of inestimable value.

Will you not for your own benefit keep a record of blooms cut from each variety of roses you grow this season, and send a copy to us for use in compiling a general average for the benefit of the whole trade?

GERANIUMS.

Mr. Fred Kanst, Superintendent of the South Park System, Chicago, informs us that since the publication of his list of favorite bedding geraniums in the FLORIST has been flooded with letters from all parts of the country asking for cuttings of the varieties, some enclosing money. He says that he can not sell anything from the parks and has no time to pack and ship cuttings to applicants no matter how much he would like to accommodate them. Further that the letters are too numerous to answer. We therefore publish this explanation as an answer to all his correspondents on the geranium matter.

WE HAVE received from T. F. Keenan, Chicago, samples of a new style of letter for inscriptions on designs, which seem admirably adapted for the purpose. They are made of stiff wire wound

with chenille, the ends of the wire being bent over and sharpened for the purpose of attaching to the design.

WE HAVE received some very good blooms of tuberosus begonias from Mr. A. C. Parfrey, Richland Center, Wis. They are from Laing's seed and the flowers are a fair representation of the strain, but not equal to others we have seen. It is pleasing to note that the interest in this remarkable class of begonias is becoming more and more general.

MESSRS. F. MORAT'S Sons & Co., Louisville, Ky., send us specimen blooms of a seedling dahlia raised by them two years ago and which they have named President Harrison. The flowers are of large size, full double, nearly four inches in diameter, light lemon yellow, lightly blotched with carmine. They are very bright and showy.

A BLOSSOM of the tuberose which measures 2 1/2 inches across has been sent us by Albert Fuchs, a Chicago florist. It is perfect in form, full double, and presents no indications of being two flowers grown together.

The advertisement of the Whildin Pottery Co., which appeared in our October 1st issue was intended for the issue of September 15, but reached us a little too late for that number, hence it was necessarily held over till Oct. 1.

Catalogues Received.

Thomas S. Ware, Tottenham, London, England, bulbs; same, plants; G. J. Alberts & Co., Boskoop, Holland, azaleas, clematis, conifer, etc.; John Gardiner & Co., Philadelphia, bulbs; J. B. Lamesch, Dornmieding, Luxemburg, roses; Hillebrand & Breidenich, Pallanza, Italy, plants; Thomas W. Weathered & Sons, New York, greenhouse building and heating; F. Sander & Co., St. Albans, England, orchids; A. M. & J. B. Murdoch, Pittsburgh Pa., bulbs, plants and nursery stock; H. Cannell & Sons, Swanley, Kent, England, bulbs, plants and seeds; J. A. Simmers, Toronto, Canada, bulbs; C. M. Hildesheim, Baltimore, Md., bulbs, plants, seeds and supplies.

Changes in the Tariff.

Following are the changes in the tariff affecting plants, nursery stock and bulbs:

"Plants, trees, shrubs and vines of all kinds commonly known as nursery stock, not specially provided for," must now pay duty at the rate of 20 per cent ad valorem. These were formerly admitted free.

On the free list we find "Orchids, lily of the valley, azaleas, palms, and other plants used for forcing under glass for cut flowers or decorative purposes."

In another paragraph in the free list appears the line "Bulbs and bulbous roots, not edible, not specially provided for."

The new tariff went into effect Oct. 6.

Housing Violets.

In reply to Subscriber's query as to whether all the runners should be taken off from violets when they are housed for winter bloom, the runners having flower buds, Mr. Geo. Klehm, of Arlington Heights, Ill., states his practice as follows:

"All slim runners are picked off, and if plants grew very large then there is enough of the large runners picked off so as not to crowd the plants any on the bench. If the plants are small we leave all strong runners on as they bring the best violets in the month of February."

Gardiner's Superb Strains of CHINESE PRIMULAS

Points on Advertising.

ED. AM. FLORIST.—It is nearly seventeen years since the writer first began to advertise, and in all that time the oneness that has been most strongly learned is the sense of how little we really know about it; therefore it was not with any degree of satisfaction we read your request to give, through the AMERICAN FLORIST, some facts and figures about advertising. As one writer has remarked, "Advertising is by no means an exact science," in fact both the value of given mediums and of methods of presenting the advertisements are continually changing and a plan of advertising that is productive of good results one year may the next year utterly fail to bring satisfactory returns.

The well-known professional writer of advertisements, Mr. Powers, of New York, strongly maintains that the same advertisement should not appear twice; that as an editor would not repeat an editorial, so an advertiser should not reprint an advertisement—confessing thereby that he did not expect it to be read upon its first appearance. It must be admitted that Mr. Powers has been eminently successful in this line, while he is also doubtless to be credited with originating the very popular Wamamaker style of advertising in the daily papers. But if, instead of having to present to the public dry goods, furniture, etc., in their ever changing styles and prices, through the columns of the daily press, he had been confined for the season to the goods offered in a seed catalogue—subject to no change in price or variety—and had to reach a constituency scattered throughout the country, he doubtless would have arrived at an entirely different conclusion. The advertiser of dry goods, etc., has a great advantage from the fact that every reader of the papers is a possible customer, and particularly the ladies of the household, being naturally interested in the articles, can eventually be led to turn daily to the skillful advertiser's announcements for the latest news of fashions, or of special offerings.

Should the seedsman, however, pursue the same plan, with its attendant expenses, he would soon be bankrupted, for of most of the mediums in which he advertises there are comparatively few of the subscribers who have occasion to use his goods. The first point, therefore, for the florist or seedsman to determine in considering the value of a given paper as an advertising medium is not merely the extent of its circulation but the *character*, and out of the total number of subscribers the probable proportion who are really users of his goods. Then let him decide the amount of money he can profitably pay to present his card to this constituency, and it will readily be seen that he can not afford to spend nearly so large a sum as the advertiser whose wares appeal to the wants of the general public.

Relative to the character of an advertising medium there is another point that the florist or seedsman who advertises for mail business must be careful to consider: are the readers of this paper in the habit of sending orders for goods away from home?

The manufacturer of special brands of

patent medicines and the commission seedsman—all of whose goods can be had at the village store—can well afford to advertise in local county papers and "patent outsiders," but it is our opinion that money thus spent by those seeking returns through the mails is almost entirely thrown away. In every community the more progressive and intelligent people, in addition to their home county paper, will be found to take some secular or religious weekly, agricultural journal or magazine, and the very fact that they have subscribed through the mails for such papers shows that they can be induced to write for anything in which their interest may be aroused. Again in another point must the character of circulation be considered. A discriminating advertiser of seeds in selecting religious papers would naturally avoid the Hebrew journals because the Jews are rarely farmers or gardeners; neither would he use the largely circulated (and consequently high priced) Catholic journals, the circulation of which is mostly drawn from large cities and manufacturing districts. For the same reason he would not waste his money upon the largely circulating weekly story papers, the price being altogether too high for the small percentage of rural readers that such papers reach.

After making a judicious selection of the mediums in which he will invest his money the advertiser should fully realize that it is an investment and not a speculation. In 99 cases out of 100 he will be woefully disappointed if he expects large returns quickly. In no business is the caution "Make haste slowly" more necessary, while in few is it so seldom heeded, as in that of the seedsman or florist who is striving to build up a mail trade. "Keeping one's hands off it brings success." The paying results of advertising are seldom immediate but rather cumulative.

As an illustration of what we mean by the cumulative effects of advertising we may be allowed to mention a case in our own experience. In 1875, when the price of one dollar per agate line seemed prohibitive in our eyes, the representative of the *American Agriculturist*, who at that time was W. W. Beach—than whom we have never met a better advertising solicitor—called upon us. Mr. Beach "talked us into" giving him a yearly contract of more than ten lines of advertising, whereby we would secure 20 per cent reduction on all the advertisements inserted during the year. With a circulation of 100,000 this, as he explained, would bring the cost down to less than one cent a line per thousand and with the character of his journal, that only admitted trustworthy advertisers to its columns, would surely pay. He prevailed upon us to give him for the first month copy for seventy lines, which we did with every feeling of confidence in the results. But alas, for the realization of our hopes! Although prepared with great pains—and to our mind it was a very "taking" advertisement—it brought us just one letter of inquiry and a postal card, neither of which led to a sale. Fifty dollars seemed to us a cost utterly disproportionate to the returns and yet we had a contract for a year to carry out. Therein was Mr. Beach wise beyond many of his co-laborers. As to the ultimate results we need only say that we have renewed the contract every year since, and to-day rank the readers of the *American Agriculturist* among our very best customers. We have on several occasions mentioned this case in conversation with friends in

the trade who have become discouraged because advertising has not paid them and have failed to consider that it requires time to gain the confidence and secure the good will of the readers of any reputable journal.

Therefore we repeat, look upon judicious advertising not as a speculation—to bring profits now or never—but as an investment necessary to establish a permanent business that shall be far reaching in its connections.

And now, Mr. Editor, we have given you what, in the light of our experience, we regard as a few facts, but have not touched upon the figures, for which you also ask. These must be reserved for another occasion, as we have doubtless already consumed too much of your space. We would also, if opportunity offers, like to speak of the circulation of catalogues and the proportion of resulting orders from old customers and from new.

W. ATLEE BURPEE.

Philadelphia, Sept. 17, 1890.

A Reply

AMERICAN FLORIST CO., Gentlemen.—We noticed in your issue of Sept. 1st a letter written to you by J. A. Everett of Indianapolis, in which we were interested. We enclose you a statement we sent him a few days since, also his reply which was mailed Sept. 27th. We think he is a —

— and do not intend to accept his offer of twenty-five cents on the dollar, which he has several times urged us to do. We think this matter should be published in the AM. FLORIST in contradiction of his letter. Respectfully, G. J. MOFFATT.

New Haven, Conn., Sept. 29, 1890.

CAPE VINCENT, N. Y., October 1.—On account of the McKinley bill going into effect October 6 the two large seed houses at this place, the Cape Vincent Seed Company and the Cleveland Seed Company, are busily engaged in freightage from Canada all the peas grown there for them. The Cape Vincent Seed Company has four schooners carrying peas day and night and is running its warehouse night and day.

PHILADELPHIA, Sept. 27.—A reception was given to H. L. DeVilmorin and his son, Philip, both well known botanists of Paris, at the Bellevue last night, by the American Botanical Seeds Union.

TRUMBULL, REYNOLDS & ALLEN, of Kansas City are reported to have sold out.

SOME of the late varieties of squash will produce a light crop of seeds.

Tariff on Seeds.

The import duties on seeds as provided by the new tariff which went into effect October 6 areas follows: "Garden seeds, agricultural seeds, and other seeds not specially provided for in this act, 20 per cent ad valorem." This is the old rate.

The following are on the free list: "Seeds: amise, canary, caraway, cardamon, coriander, cotton, cummin, fennel, fengreek, hemp (old rate by per pound), leek, linseed, mustard, rape, St. John's blood or leek, sugar-beet, mangel wurzel, sorghum or sugar cane for seed, and all flower and grass seeds (old rate 20 per cent); bulbs and bulbous roots, not edible, all the foregoing not specially provided for."

VERBENAS.

Rooted cuttings, fine varieties by mail prepaid, 50c. per 100. By express, 30.00 per 100. 50c. at 1000 rates.

S. W. PIKE & CO., St. Charles, Ill.

Our Trade Directory.

Some complaint has been made regarding our list of those in the trade at West Hoboken, N. J., circulars having been returned from that postoffice to the senders, and the correctness of our list questioned in consequence. The following from the Postoffice Department at Washington explains the situation:

"There is no free delivery system established at West Hoboken, N. J., hence mail matter can not be sent out for delivery except upon the order of the addressee, in which case it is delivered to the person employed by the addressee to call for it. The persons to whom the circulars were addressed have employed a private carrier who calls at the office for mail to be delivered to them, for which they pay him a stipulated amount for each letter. They having refused to pay him for the delivery of circulars he declined to deliver them, and they were necessarily returned to the senders as refused, as the addressees do not call at the office for mail at all. This delivery arrangement is one with which the postoffice department has nothing whatever to do. If the addressees of mail do not call at the postoffice for it, and if their agent declines to take it, the postmaster can neither force him to take it, nor can he send it to them by a messenger at his own expense."

DUTCH BULBS,

NOW READY.

THE WISCONSIN FLOWER EXCHANGE,

183 Mason Street, MILWAUKEE, WIS.

ORIGINAL AND LARGEST GROWERS OF
LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view to one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, o a crop of Liliium Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in. For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that Liliium Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so well packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine Liliium Harrisii. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiternum* in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock, irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Foreign Notes.

JEAN BAPTISTE ALPHONSE KARR, the well known French author and horticulturist, died October 1.

WILLIAM HOLMES, Secretary of the National Chrysanthemum Society of England, died September 18, aged 38 years.

THE DAHLIA conference at Chiswick the latter part of September brought out a fine display of dahlias, comprising every section. A lecture on the "Origin of the dahlia" was delivered by Mr. Shirley Hibberd.

MESSRS E. H. KRIEGLAGE & SON of Harlem, Holland, exhibited six spikes of Gladiolus "Snow White" at the meeting of the "Dutch Royal Horticultural Botanical Society" at Amsterdam August 26 and received a first class certificate of merit for them.

Overhead Heating.

I would like to know if four 1-inch steam pipes run the full length of a house 11x50, suspended four inches from the glass and two feet apart will give me heat enough for a general stock of plants? I have a 4-horse power boiler, upright, five feet below floor of greenhouses. A reply to above will be much appreciated.

Wethersville, Md. J. A. HEIDLER.

Established 1835. SEASON 1890-91.
Nurserymen & Florists' Supplies

GENTLEMEN:—We have increased our list of supplies for the coming season, and are now able to offer a complete stock of all Packing Materials, as well as the necessary Field Tools. We hope to have your valued order soon.

S. A. F. Attention

Our defeated competitor in "Standard" Flower Pot contest at the Boston meeting, for the **Certificate of Highest Merit**, reflects on the members of the Committee of Award as not being impartial in their decision. The members of that Committee were M. A. Hunt, Terre Haute, Ind., Chas. Henderson, of the firm of Peter Henderson & Co., New York, and Wm. K. Harris, Philadelphia, Pa. No fairer or more competent committee could be selected from the members of the S. A. F., and as far as diligent inquiry reveals, their decision meets with the approval of everyone excepting A. H. Hews & Co.

The official programme gave notice that the Certificate would be awarded to the display "which most nearly approaches the 'Standard,' such display shall consist of not less than one dozen of each size, made from working molds and not turned down." The sheet with drawings of the pots (which was gotten up by A. H. Hews & Co., under the instructions of the Committee of S. A. F. and sent to the different potters for their guidance) shows 17 sizes, and the number we exhibited; one dozen of each, as required. In regard to the statement published by A. H. Hews & Co., that "very many" of our pots were **"either ground, filed, turned or sand-papered to size,"** we wish to distinctly say that this is **FALSE**. The pots we exhibited for the Certificate were made exactly as we make them for our customers, and were not altered in any way whatever; in fact it is impossible to alter the inside measurement after a pot is once made; a mold that will make one pot correct will make any number (until the mold wears out) exactly the same. In reference to the absurd "propositions" of Messrs. A. H. Hews & Co., we decline to be a party to the proposed exhibitions as it would be a gross insult to the honorable gentlemen of the committee, who, after giving their time and labor to the society, are at least entitled to common courtesy.

SIPPLE, DOPPEL & CO.,
SYRACUSE, N. Y.

I was at Boston!

But lots of my friends by mail didn't meet me because the Society of American Florists hadn't provided the means of identification they agreed to at Buffalo. I may have to wear a red coat at Toronto; I don't want to miss so many people again! I'm not pretty, but I want to see who I am writing to, when I can; and I want to be seen and known.

Meanwhile

I am ready to talk 1891 Catalogues by mail. The Mount Pleasant Printery is "fixed" to do a lot of good printing for the trade this winter; and any florist can "get in" to the advantages by writing about what he wants.

[Mention The American Florist.]

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN**. We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from 1 1/4-inch to 7-inch inclusive, and 250 pots each from 8-inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

A. T. CEFREY'S

Patent Improved
Florists'

Immortelle Letter and
Pin Fastener.

CEFREY LETTER CO.

GENTLEMEN:—I find the new machine made Immortelle Letters manufactured by you very salable and in many respects superior to anything of the kind we have ever handled. Their uniformity of shape, size and color, the convenient form in which they are put up, and the excellent device for fastening them to the work, are among the most commendable points in your letters. Please double my last order and deliver as soon as possible. Yours truly,
W. J. STEWART.

A. T. Cefrey

CEFREY LETTER CO., 13 Green St., Boston.

DEAR SIR:—Please ship me five thousand letters as soon as possible. They are the best and most practical letters in the market. The pin fasteners are a long way ahead of the old fashioned way of wiring. Yours truly,
N. F. MCCARTHY.

CEFREY LETTER CO., Boston, Mass.

DEAR SIR:—Send at once ten thousand small letters and five hundred large (two inch.)
GALVIN BROS., Boston.

We wish to announce to all florists that we have removed to much larger quarters, **No. 13 GREEN STREET, BOSTON.** We make our letters by machinery; they are not only more perfect in size, shape and color, but are the best and cheapest in the market. Our 2-inch letters are only two and a half cents, and the 1 1/2-inch letters are only two cents apiece. Your customers will have no o's. Be up with the times! Send us your orders and we will ship you a supply for this winter. **They are the best in the market.**

THE CEFREY LETTER CO., 13 Green Street, BOSTON, MASS.

A Skull for a Flower Pot.

W. G. VanBuskirk, the master mechanic of the Terre Haute & Peoria Railroad shops at Paris, Ind., has a peculiar flower pot hanging in his door yard. This gruesome relic is made out of a human skull, and is suspended with slender chains. The brain cavity is filled with earth, and a beautiful growth of vines creeps from the empty sockets and grinning jaws. Across the forehead is printed the inscription, "To what base uses may we come at last," and the beholder as he gazes on this ghastly burlesque on human greatness can not refrain from involuntarily echoing the sentiment. The skull has something of a history, being that of a theological student who committed suicide. He was interred in a small graveyard which afterward fell into disuse and decay and was finally sold for building purposes. In making an excavation the skeleton was exhumed and the skull came into Mr. Van Buskirk's possession.—*Easton, Pa., Press.*

Philadelphia Mum Notes.

Chrysanthemums.

"Gloriosum" is the first to make its appearance in quantity and quality; but there are not nearly enough to supply the demand, and that at \$15 per dozen wholesale.

Only last year at this time some of the retail florists deplored the fact that some of the growers had devoted their time, space and intelligence to the production of only first-class, high priced flowers, instead of those at a dollar per grab (which was rarely less than 100). The same retailers this year, are the most eager after the better class of blooms. And we are pleased to be able to so record it. "A wise man changes his mind, a fool never."

In a recent issue of the FLORIST Mr. Chitty says, in mentioning chrysanthemums, "their very presence seems to create a necessity for something else." We in this city cannot indorse that assertion. It is really the opening of the season for flowers. I would like Mr. John Westcott to express himself on that point.

Just at this time roses are plentiful and in a short since it is to be feared, they will be too plentiful. Rose growers should, by judicious disbudding avoid the rose glut which is inevitable at this season of the year if some intelligent action is not brought to bear on this very important matter.

Give the mums a chance by withholding the large crop of roses at this chrysanthemum time of the year, and the Queen of Autumn will be voted a blessing by the very men who have heretofore vigorously denounced her as an usurper.

If the number of rose buds is vigorously reduced at this time when only a very low wholesale price is paid for them, the plants will be better able to withstand the high pressure to which they must be subjected later on, when Beautys and La Frances and all good roses are more highly appreciated, and every body interested is better satisfied and infinitely better prices rule all around.

To return to chrysanthemums Mrs. Bullock will be the next one to claim the attention of the public in numbers, and as to quality for a white it is hard to beat, either as an exhibition plant or when

grown for cut flowers. When "L. Canning" was first sent out it was compared to the Bullock, as possessing superior keeping qualities, to the older well-known kind, but there is no rivalry between them, most of the Mrs. Bullocks will make their exit before Miss Canning makes her bow. Mr. John Thorpe says that the Canning is the best white chrysanthemum in existence.

Before this meets the eyes of your readers, lots of flowers will have been cut and plans for the future will be in the course of formulation.

There are too few of us who take the time and trouble to make notes. We depend altogether too much on our memory which is often treacherous. Some varieties are better disbudded to a solitary flower, while others are better left as sprays; which the new varieties are better suited for can only be determined by experiment. Philadelphia as a market seems to incline more to sprays than to individual flowers at present. Another matter which it is necessary to carefully note is the time of flowering and whether the flowers contain the necessary amount of substance to warrant them in shipping well—long distances—if necessary.

We do not hear much in this city about Mrs. Alpheus Hardy as a cut flower so far, it was said last year that it was too weak in the stem. Certain it is—it is the most chaste and beautiful variety we have up to date. It is the only variety with which Adiantum cuneatum associates in perfect harmony. Boughs with the various colored autumn leaves are generally mingled effectively with the varieties in general.

I have not seen any of the specimen plants for exhibition purposes yet. So that I can only speculate on who has the finest lot. Eben J. Williams Colish has some good ones, so also has W. K. Harris, and the winner of the highest premium last year, Mr. Vernor, gardener to A. J. Drexel, Esq., it is said has some prize winners. The valuable and varied premiums offered by the friends and members of the Pennsylvania Hort. Society, in addition to the money prizes offered by the society itself, ought to bring out the very best talent in chrysanthemum culture that can be found within safe shipping distance from this city. Any person who has an interest in such matters, whether they intend to exhibit or not, would do well to apply to Secretary D. D. L. Farson who will cheerfully forward a copy of the premium list to all who apply for it.

Much interest centers in the seedlings and new varieties generally. It is said that William K. Harris has not so many in number this year as formerly. The seed did not mature satisfactorily or did not germinate freely. Robert Craig, who has not figured heretofore as a raiser of seedlings, has them in great numbers and

THE AMERICAN FLORIST will be a weekly visitor henceforth and without any increase in the subscription price.

CORRESPONDENTS should bear in mind that copy should reach us by Monday at latest in order to insure insertion in the issue of the following Thursday.

in all sizes, and amateurs and their gardeners have them in larger quantities than ever before, so that there will be no scarcity of interest among the admirers of something new.

I received through the mail last evening two new varieties from Mr. Elijah A. Wood, West Newton, Mass., and the names are hereby put on record: "Mrs. E. W. Wood" and "James H. Freedland." The former is a rich dark purple after the style of "Hon. John Welsh," but the flower is larger and has more substance than the old variety had. The latter is a very large flower with broad petals, bluish in color which will no doubt become pure white after being open a few days. It certainly appears to be an acquisition.

If all raisers of seedlings and distributors of new varieties would be good enough to forward the names of their novelties to me they would be registered, and thus avoid this confusion of duplicate names. Most of the chrysanthemummen have agreed to do so, and I trust all will see the importance and necessity of doing so and forward names, accompanied with their respective flowers; a description could also be recorded with the name, and in due time given to the public.

EDWIN LONSDALE.

A New Departure.

Mr. Thorpe's article under the above caption in the last FLORIST reminds me that I too have something to say in that connection; not in naming new chrysanthemums—I will leave Mr. Thorpe in undisputed possession of that field, and long may his "Esperanza" and "Tommy Adams" live to adorn the now somewhat lengthy list of mums. But this season I have adopted an entirely new plan of growing my chrysanthemums and am so far so well pleased with the results that I hasten to impart the news.

Heretofore I have always grown my mums through the summer with the pots either standing on or partly plunged in coal ashes, rotten tan bark, or some other material, which plan required nearly the whole time of one man pouring water on them to keep them alive, to say nothing of keeping the foliage in something like a presentable shape; and often after the most unremitting attention had been bestowed upon them all summer, many of them would look in September as though a cyclone had struck them, and the stems would appear so hard and dry that they did not seem to possess vitality enough to develop into flowers the few miserable buds that terminated their stems.

This season, however, when my plants were large enough to require shifting from 4-inch pots into larger ones, they were so shifted into 6-inch pots; then a trench was dug across a piece of ground, two inches deeper and a little wider than the pots, the pots stood along the bottom of the trench about two inches apart and the earth filled in and firmly pressed down on each side of and between the pots until the spaces were all filled to their rims; the plants were then treated to a good watering and allowed to stand until the water had soaked away, the balance of the earth was then replaced, moderately well pressed down, and finished off evenly, after which nothing was done to the plants excepting keeping clean of weeds until the time to place them under glass; not a drop of water did they require or get except what fell from above, and such plants they were as did no good to be put at, with the large green healthy foliage down to the very surface of the ground.

On the first of September we began to lift them to plant inside where they were intended to flower and although many of them were quite large and sappy the whole operation was performed without the loss of a plant or even the wilting of a single leaf, in striking contrast with some so called field grown plants which were lifted a little later (plants turned from small pots and planted in the open ground and allowed to grow there) and which required over three weeks to recover from the shock. My beds are now a mass of buds with foliage as green and healthy as it is possible to be and it now looks as though I shall be able to cut chrysanthemums by the wagon load.

But now for the new departure! The plants above described now occupy the centre beds of some of my carnation houses, which in fact was the only means at my disposal for the accommodation of so fine a lot of plants; the side benches were then filled with carnations, I then made arrangements to have potted in 6-inch pots enough carnations to fill the centre beds as soon as the mums are out. The carnations are now in sunken frames, four or five thousand of them in number, and are filling the pots handsomely with roots. The mums are planted in rotation as they flower so that when the earliest are all cut we shall immediately fill up with carnations and so on until the very latest are all disposed of.

The carnations being in frames that are sunken the depth of the pots below the lower edge of the boards of which they are made, will with sashes over them be perfectly safe even though quite a severe frost should happen.

My expectations are to secure two full and perfect crops of flowers from beds where only one crop, viz: carnations, had heretofore been realized, because the time between the removal of the old carnations and planting out the new ones was so short as to preclude all possibility of growing an intermediate crop.

Should this plan therefore be a success, for which I can see at present not the slightest reason to doubt, it will be a clear gain of the crop of chrysanthemums. The carnations occupying pots are advancing just the same as if planted on the benches; they in reality are even more rugged in consequence of an extended outside exposure, while at the same time they are throwing up their buds so as to be ready for business when ultimately required to replace the mums.

H. E. CHITTY.

Faterson, N. J., Oct. 9, 1890.

Nomenclature.

In your last issue I read the communication from Mr. J. Thorpe and was amused and puzzled to know whether the article was intended for satire or whether Mr. T. was in sober earnest. If the latter I for one take exception to what he says about the name of a plant not helping its sale. We had this matter ventilated a few weeks ago with reference to the chrysanthemum Mrs. Alpheus Hardy. It was made clear at that time that a descriptive (or catchy) name helped to sell the plant. And I have frequently noticed that amateurs in making selections from catalogues select the varieties having the most pleasing names. Another reason why short names are preferable is that long ones are sure to be abbreviated and any one not well posted may easily be misled. I find in my own case that in writing labels for stock plants I often omit the initials of a given name, and if there are as many as the Jones or the Greens commemorated by horticultural admirers the varieties are bound to get mixed. I

believe a short simple name is the best, and believe the plant so named, if its merits are equal, will sell better than the plant with the long name. I know a family who have a son named Zerubbabel and know some others in the possession of names who I imagine often wish a committee on nomenclature had been consulted at their christening who would probably have relieved them from the load they have to carry through life. What prompted me to sit down and inflict this upon you and your readers was this: Four years ago I bought a collection of chrysanthemums from Peter Henderson & Co., and one of them was labeled G. W. Childs, I thought possibly some one else had pre-empted, so to speak, that name already.

C. B. Arlington, N. J.

Judging Plants by Points.

The plants entered for competition at the chrysanthemum show of the Pennsylvania Hort. Society to be held at Philadelphia, November 10 to 14, will be judged by points as follows:

Size of bloom and quality.....	30 points
Size of plants.....	30 "
Distinctiveness of form & color 10 "	
Foliage.....	20 "
General effect.....	10 "

Total.....100

VARIETIES OF *EPIPHYLLUM TRUNCATUM*. (SEE PAGE 136.)**New Early Chrysanthemums.**

We are quite fortunate this year in finding some really fine and valuable new varieties from the French introductions; last year it was quite the reverse, only a small percentage being of any value.

We must bear in mind, however, that our European friends have been trying hard for early bloom in their new sorts, and many of the best imported varieties are not known in our country because they can not be shown in good condition at our November shows, and it really

seems that unless a new chrysanthemum can make a record at one or another of our prominent exhibitions, it is bound to be very slow in gaining recognition. Of this fact, however, we have no complaint to make; the exhibitions are splendid opportunities for prospective buyers to see the true character of novelties offered.

Among the new ones of this year is a very beautiful, rather dwarf, white, flower medium to large, soft and plump in effect as it is extremely free; among November's white varieties it would be in no wise remarkable, but coming into bloom from

October 1 to 5 it at once becomes valuable. This is Mme. Ferdinand Bergman from Delaux. Another very pretty variety coming only two or three days later is Rose Laing (Delaux); the flower is of good size, center soft heliotrope pink, prominently whorled, and showing finely against reflexed outer petals of pale silvery pink lined deep mauve. We think this one of the very best of the earlies; it is well thought of across the water, as the Belgique *Revue Horticole* gives a fine colored plate of it.

M. Harry Laing (Delaux), comes into

bloom at the same time and reminds one of Lillian Bird in its early stages and is a really pretty early sort.

Mme. Sautel (Hoste). Another pretty pink, tipped yellow in the center.

Ulrich Brunner (Hoste), large rose violet, color of E. Audigier; of extra size, even for a late sort.

Aurora (Lacroix). One of the earliest of all, and a fine enough yellow to go to the November shows; has been in bloom two weeks or more.

Souv. de M. Menier (Delaux), larger than the average Cullingfordii and quite similar in color.

Margaret Decazis (Lacroix). Good sized vine pink with whorled center; informal.

M. R. Bahnant (Hoste), good sized terra cotta, quite similar in shade to W. W. Coles.

Circe (Lacroix), pure chamois color, recurving and reflexed petals; a good chrysanthemum even among later sorts.

M. H. de Fortanier (Hoste), deep velvety lake; of extra size. We consider this extra fine.

We send specimens of all the above, labeled. The rest are from a lot of our seedlings, and we think several of them more than ordinarily good for mid-October sorts.

Finally we enclose a few M. Norman Davis and M. Neville that you may compare these two, which have been highly prized heretofore, as good early sorts.

All of the enclosed blooms are from field grown plants to which no special care was given and which were brought to beds in the house just before frost.

S. A. HILL.

Chrysanthemum Synonyms.

A correspondent of *The Garden*, London, gives some interesting notes on synonyms among chrysanthemums. For instance, in 1886 Messrs. Cannell exhibited several new varieties imported direct from Japan, and which they distributed the following year. Among those which received a first-class certificate, and which was indeed quoted at a higher price than any other, was Mrs. H. Cannell with beautiful pure white flowers. Now, this is by all growers (Messrs. Cannell included) regarded as synonymous with Christmas Eve, a variety distributed by the American nurserymen, and sent to this country two years previous to the distribution of the other, viz., in 1885. Another flower is Lady Trevor Lawrence, which is the same as Mrs. Beale and Robert Bottomley, this last coming from the other side of the Atlantic. Several other instances are recorded in different catalogues of the same variety being distributed by an English and an American nurseryman under different names. Included among the number are Mr. Frank Thompson and Mr. W. G. Drover, Marvel and Mr. H. Wellam, Charlie Sharman and W. M. Singerley, Mrs. Vannamann and Mr. Addison, with Mrs. J. N. Jerard and Mrs. Dunnett. All this is, no doubt, to be accounted for by the fact that they have been imported direct from Japan, and, therefore, the identical varieties have been distributed on the two continents.

Epiphyllums.

These are very popular house or greenhouse plants, true cactuses, and natives of Brazil, particularly of the Organ mountains, under 4,500 feet elevation, and where they are found mostly as epiphytes upon trees. We generally call them lobster-claw cactuses from the likeness of

their jointed branches to the jointed claws of a lobster.

Two species, namely, *Epiphyllum Russellianum* and *E. truncatum*, are common in cultivation, the last named and its varieties being the most frequent; hybrids, to wit, Gartneri and Makoyana also occur. We often find some of the large, flat leaf cactuses (phyllocactus) named epiphyllum, but modern botanists do not so include them.

Epiphyllums are of the easiest possible cultivation and will endure a great deal of abuse with very little complaint, at the same time with lusty growth and floral profusion they will repay considerate treatment. They are grown upon their own roots, also grafted upon other cactuses, and do well in both cases. Own-root plants are raised from cuttings and they make pretty, dwarf pot plants or basket plants, and every bit of a branch, small or large, will root readily if kept dry for some days before planting.

Pereskia aculeata, or Barbados gooseberry, is a thorny, woody vine, and although not at all like a cactus, is one nevertheless. It is the stock on which epiphyllums are mostly grafted. We may graft them at the ground line, a few inches above ground, a foot or two, or in fact at any height we please, or we may run the pereskia up a pillar or rafter in vine fashion and insert a few scions of epiphyllums here and there along it where we please. For an illustration of this sort see the FLORIST, page 327, March 1st last.

The pereskia is slender stemmed and a big-headed epiphyllum upon it always needs support. The great advantage of the pereskia as a stock consists in its tough never-die nature, much rooting and hearty feeding qualities.

Tall, stiff, upright growing fleshy cactuses, many of the ceruses for instance, make excellent stocks for epiphyllums, and as they are perfectly able to support unaided the large heads of lobster-claw cactuses a very fine effect is secured, especially when the ragged branches drop down three feet or more as those of old plants will often do.

For epiphyllums as for all other cactuses thoroughly drained pots are imperative.

They like a firm, gritty soil free from fresh manure, and when well established enjoy a liquid stimulant occasionally. I keep them somewhat moist at all seasons of the year and give them water freely when they are in full active growth. Most cactuses enjoy the full open sunshine, but the epiphyllums do not, open like a thin shade. At the same time I know many plants that do well in full sunlight. Care must be taken to use a temperature in winter suits them admirably; the younger plants preferring the warmer quarters. To save trouble I put them out of doors in summer plunged in a slightly shaded spot, and bring them inside in September. They bloom very full in November and December, also in early spring.

A real pretty way to use them is to set out some large dwarf plants in wire or wooden suspended baskets which are also planted all around with *Selaginella uncinata*. The moss will grow down all around, 2 to 3 feet, like a long fringe trimming to the vivid mass of cactus plant in the middle. They are also often planted into mosslined fernery walls along with begonias, fittonias, peperomias and the like in greenhouses, keeping the cactuses nearer the light.

Among the finer varieties are *Aurantiacum*, orange; *albo-violaceum*, white and violet crimson; *bicolor*, white and rose; *Bridgesi*, Madam Courant, Rucker-

ianum, Snowit and tricolor, differing somewhat in their tints of white, scarlet rose and carmine purple. F.

Azaleas.

These useful spring-blooming plants take quite a prominent place in the stock of many florists, both as cut flowers and also for decorative work, and with good reason too, for there are few plants so effective as a well flowered azalea.

At the same time it may be remembered that it costs no more to grow good varieties than poor ones, the same attention being necessary to keep either in good condition, and as good sorts are to be had at reasonable prices it pays to rejuvenate the stock from time to time.

Many of the imported plants of standard habit are received in good condition each season and give satisfaction to the purchasers, but it is not absolutely essential that azaleas be imported to secure good plants, as with proper care first class plants may be grown at home.

Of course it has been said that fine stuff could be secured for such low rates in Europe that it did not pay the home florist to grow azaleas, but this is still an open question and may be differently decided in future years. The fact remains, however, that it is not an extremely difficult operation to root azalea cuttings providing the cuttings are made from short young shoots taken off with a heel of the old wood attached to the base, and with many varieties even this precaution is not needed, but in all cases a sharp knife should be used for the operation so that a clean cut is made. The cuttings should be kept rather close at first, as when once wilted they seldom root.

If grafted plants are required the stocks must first be provided, the most common sort for this purpose being the old single purple variety known as *Phœnicia*. This variety roots very easily and the young plants soon run up to a height sufficient for grafting.

The union between stock and graft is soon accomplished if the plants are kept in a warm house and fairly well shaded, and after this is completed the plants should be grown on in a well ventilated house, the shoots being pinched back from time to time so as to ensure a nicely shaped head.

An easy method of handling the young stock during the summer is to plant them out on the side benches of a cool house, moderately shaded at first but gradually dispensing with the shading as the growth progresses, and with thorough syringing and an occasional fumigating to keep down thrips, the plants so treated will be found to have made more and stronger growth than plants of the same age that have been kept in pots all summer.

In the fall, after the growing season is over, the plants may be lifted and firmly potted into as small pots as the roots will permit.

In the matter of soil there has also been some change of opinion of late years, for it is now known that while peat is a welcome addition to most soils when used for azalea culture, yet it is not absolutely indispensable, for good azaleas have been grown in pure loam and sand, and therefore a lack of good peat need not be a barrier to the successful culture of these plants.

Among the hundreds of fine varieties now in the market it is not an easy matter to select a short list suitable for general use, but the following varieties are all good reliable sorts and include enough variation of colors for all ordinary purposes:

GROUP OF DECORATIVE PLANTS AT THE BOSTON EXHIBITION.

For whites, (and these are doubtless the most useful to the average florist), "Deutsche Perle," "Flag of Truce," and "A. Borsig," are three of the best semi-doubles, and if a single-flowered variety of this color is required, either "Fielders' White" or *indica alba* is recommended.

Amid the host of pink sorts "Mad. Van der Cruyssen" stands out as the finest for general use. It has large flowers of a most effective shade, forces well and is generally satisfactory. "Bernhard Andreas" is a good semi-double of this hue, and (Oswald de Kerchove is also a strong and rapid grower and produces very large and somewhat irregular flowers of a very pleasing shade of pink.

"Eugene Mazel" is among the best of the reds, being a nice grower and most floriferous, and is much favored by many commercial growers. "Md. Iris Lefebvre" is another red of good habit, the flowers being double and of a peculiar shade.

A small number of striped varieties may also be found useful at times and of this type "Punctulata" and *Bijou de Paris* are among the best, both being of

shapely habit and very free in flowering.

A fine old sort that should be included in every collection is "Souvenir du Prince Albert," a double or sometimes semi-double variety with bright pink flowers that are edged with pure white, and another equally useful is "Reine des Pays Bas," the latter being a very free grower and bloomer, and the flowers of which are of a peculiar tint of pinkish violet shading to white.

W. H. TAPLIN.

Group of Plants at Boston Exhibition.

While we have already given illustrations of displays at the great exhibition at Boston last August, the accompanying engraving will still be very acceptable, as being made by the half-tone process from a photograph it gives a far better idea as to the quality of the plants shown as well as the beautiful effect created by the masterly way in which they were arranged, than could the hastily executed drawings from which the illustrations previously presented were engraved,

though the latter were certainly excellent considering the very short time in which they were prepared.

The Fuchsia Beetle.

Look out for this pest. It can do an enormous amount of damage in a very short space of time, almost before you are aware of its presence unless you keep a sharp look out.

An article by Ernest Walker, which appeared on page 568 of No. 118, (July 1, 1890), gave a full description of the little imp.

The gardener at Garfield Park, Chicago, had a visitation, and he finally got rid of them in the following way: He prepared strong suds from whale-oil soap and with this syringed the plants forcibly from below, the plants being on side benches. The force of the liquid carried the insects up against the underside of the glass where they were held by the sticky suds. Then he passed along and smashed them against the glass with his thumb.

The beetles usually appear the latter part of May or early in June and should be prevented from obtaining a foothold at that time. Their ravages are so serious that unless held in check they will make it next to impossible to grow fuchsias.

As there are but few questions absolute in their nature; nearly all being relative to time, place, and environment, so it may be that the question of benches or solid beds for roses is also subject to various modifications.

When a rose-grower speaks of Mr. May's experience and reputation, necessarily his authority has weight and we all pay due heed to his advice. When, therefore, he pronounces upon this question by a decision absolutely adverse to the solid bed system of growing roses, it is, perhaps, superfluous to advance any further argument. Yet as the writer has had considerable experience with solid beds and has not yet forsaken some adherence to this plan of growing roses, he desires to make some expression in defence of the system under discussion.

As Mr. May concedes that those who need summer roses may do well to grow them this way, no further reasons are needed to prove that as far as the production of roses is concerned, for spring and summer cutting those in the solid bed are much to be preferred to any grown in shallow benches, though by the majority of the large growers of the metropolis, the trade in summer roses is looked upon as something of no account, yet to many of us who are denied the New York market, good roses in summer are a feature of considerable value in our business. We have had to have them and if then they are a necessity, it certainly devolves upon every good business man needing them to have them in as good condition as possible. Growing them outside, as all very well know, is too uncertain in results.

But it is upon the winter production that Mr. M. decides so adversely against solid beds, giving us to understand that the comparison is infinitely to the advantage of the bench system.

No doubt if all growers follow the plan which the article implies that they do and grow their roses that are upon their benches with the maximum of care and allow those in solid beds to linger along as best they may with only spasmodic attention, then certainly roses in solid beds deserve no favor at any hands. The question though at once occurs, would not roses on benches also be failures if they only received the attention given by those who take life easy.

The fact is that roses always repay care, no matter by what system they are grown, and the maximum of attention bestowed upon those in solid beds, will be the means of reaping much success.

It is not claimed that this way of growing roses is the best, each may decide what his needs are and what plan is best adapted for his needs. Some varieties do better in solid beds than others.

Bon Silene, Perles and Niphotos thrive luxuriantly: Mermets, Brides and La France do not. We have a bed of Perles here that has been undisturbed for six years. It was supposed at the beginning of each year, that during the following summer the house would have to be re-planted, but when planting time arrived, the sacrifice seemed too great, and, therefore, these Perles are still growing, apparently more vigorous and producing more flowers than ever before. By all odds the finest Perles are cut from this house. And the opportunity for comparison is always at hand, as another house is planted with the same rose grown upon benches. Neither is the amount of winter production any less.

It is regretted that accurate figures are not available with which to verify this assertion, but the determination is formed to keep the product of each house separate for a year, and thus be enabled at some future date to state results with complete accuracy.

The writer remembers, two years back, seeing a house of Perles, grown by Mr. Messeberg, of Flatbush, L. I., and these, without exception, were by far the best Perles to be seen around New York at that time—both for quantity and quality. These were in solid beds, and had been there for eight years.

Mistakes are made with roses in solid beds by planting them in too much depth of soil. Twelve inches are ample, and the roses should always be fed from the top. Much care should be given to pruning away dead and useless wood, which has no other use than to harbor vermin. No other pruning through the fall and winter. If growth is robust (which should be if roses are grown well) some thinning of wood in the summer.

The greatest drawback to roses grown this way is the rose bug. If this procures a foothold, the only remedy is a persistent hand-picking can be made a successful way of clearing away the bugs, and thus enable the grower to retain his plants. ALFRED E. WHITTLE.

Albany, N. Y.

Seasonable Notes.

With the present season of cloudy, mild and wet weather extra care will be required to guard against mildew and black spot. The best way to avoid them is to give as much air as possible on all favorable opportunities, even on wet days; though quite mild it may be advisable at this season to keep the pipes just warm enough to admit of a free circulation of air. This will keep the plants in a healthy condition without forcing them into soft growth. Much of the success of the coming winter depends upon the way they are treated now. Of course many of the minute details of treatment must be left to the discretion of the grower as these must be varied to suit local conditions.

Water and air are two main necessities of plant life: when and how to apply them to the best advantage is the point for us to study out for ourselves. Next in importance is cleanliness; no plant will remain in good health for long if not kept clean, and this means that it must not only be kept free of insects, but also that all dead and decaying leaves should be removed as soon as possible, and all weeds kept pulled up, otherwise they will rob the plants of their proper nourishment; it is very poor policy to allow the weeds to grow among the plants till they have robbed the soil of half its virtue.

Many I know claim they have not time to keep them pulled up when small—it would be far cheaper to employ an extra boy to do it than allow them to grow.

Where the surface of the soil is getting a green scum over it, as many soils often do, it is best to choose a dry day with the soil slightly on the dry side and rub the surface over with the hand; many prefer to use a small rake for this purpose, but I prefer the hand as there is no danger of destroying any young roots by it, whereas the teeth of a rake often do considerable harm in this way. Let the soil remain as firm as possible after it is once pressed solid; should the light mulching put on earlier in the season become exhausted, another very light dressing would now help the plants to push stronger growth which means larger and finer flowers.

Hybrids wanted to bloom before Lent comes in should now be pruned and started without delay, providing of course that they have had a good season of rest and are in condition to prune. Remember that at this season it takes twelve weeks at least to get them into flower, that is, if really fine blooms are required. For those started earlier and which are now breaking nicely, a slight raise in the temperature every two weeks will help them to form and set their buds better. Give all the air possible on fine days, syringe frequently, and allow them to dry off by night. Should cloudy weather prevail withhold the syringing and keep the house slightly drier to prevent mildew.

JOHN N. MAY.

Number of Blooms Cut.

We present below another record of the average number of blooms cut from each plant of several varieties of roses during last season, kindly furnished us by an eastern grower who wishes his name withheld. It came a little too late to use with the others in last issue.

The thirty-third annual meeting of the Missouri State Horticultural Society will be held at Clinton December 2 to 4.

The sum of \$2,000 will be awarded in premiums at the coming chrysanthemum show of the Pennsylvania Horticultural Society. Of this \$1,500 is offered by the society, the remainder by individuals as special premiums.

Seasonable Notes.

This is a good time to keep a sharp look out for insects of all kinds liable to attack the plants.

Last year for the first time I was greatly annoyed by a caterpillar which was lightly decorated with a black stripe down its back. This black stripe was flanked on both sides by stripes of yellowish green, which served to make the critter somewhat ornamental when full grown, and not being aware of their presence some of these gentry had attained considerable size before they were discovered.

It is best, however, to hunt them while yet small, as their demands for rations increase in proportion to their growth; when young they may be found low down in the plant, but they gradually work their way up the flower stem, eating as they go, and finally they attack the bud and entirely demolish its interior, by which time they will have attained an inch or more in length, and the parts of the plant over which they have traveled and eaten their way will present the appearance of having been struck by lightning. The only way to clear them off with certainty is to gather them in by hand.

Green fly is also a great nuisance if allowed to get a foothold on carnations. The young tender advancing flower shoots will soon be loaded with this pest unless means are used to prevent it. The best way to keep it down is to distribute tobacco stems about the house, and replenish as they appear to lose their strength; but should the green fly attain considerable of a foothold the best way will be to fumigate with tobacco stems quite moderately two or three times, after which the pest may be kept in check by the stems distributed in the ordinary way.

Red spider is not liable to attack carnations unless fire heat is used, and only then through gross neglect, as an occasional washing early in the day will effectually prevent their lodgment, but should red spider become thoroughly established on carnations there is nothing more effective in driving it off than one or two applications of air slacked lime liberally dusted on the plants and about the house where the pest holds the fort. When the lime dust is applied you can not exactly hear the red spiders sneeze, but if a close lookout is kept on them their antics in endeavoring to escape will be found quite amusing.

The depredations of slugs or snails is quite annoying and if left unchecked amounts in the aggregate to quite a considerable damage; their objective in the carnation house seems to be the flowers which they devour with great relish. I have generally been quite successful in keeping them in check by distributing the rinds of musk melons about the houses and outside; this is a bait they will travel quite a distance to secure, and if the matter is thoroughly attended to when the melons are in season but little annoyance will be suffered during the following winter. The way to operate is to place the melon rinds about during the day, and then at night visit them with a box of lime or a sharp stick and gather in the

crop; if this is repeated two or three times but very few will be left for winter use. I think Mr. McGowan's plan of turning wild land turtles loose into his houses is a good one; I intend asking him to train a few of them especially for my use.

The magnificent weather which now prevails is just the thing for carnations, take every advantage of it by throwing the houses wide open as long as it lasts, plenty of fresh air day and night is what they now want, and this coupled with thorough cleanliness will be found a very material assistance in the attainment of final success.

If some very early plants are needed of some special varieties or for particular purposes, no better time than the present will be found for putting in the cuttings; they will now root very readily and make fine strong plants for very early flowering.

H. E. CHITTY.

Paterson, N. J., Oct. 9, 1890.

NOTE.—On page 90 of the FLORIST, October 1, third column, second line from bottom the types make me say that I could not afford to grow the *Hume's*. While any longer on account of its habit of growing in crops. It was intended to read on account of its habit of *flowering* in crops.

Wire Supports.

If anyone who has used wire for supporting carnations or has seen it tried will give the result of their experience or observation to the readers of the FLORIST it will undoubtedly be of great practical benefit to many.

J. G. H.

Long Island Notes.

BY WM. FALCONER.

THE MOUNTAIN FLEECE is now in capital bloom and has been so since the end of September. Old stools that were not replanted last spring have not bloomed as well as have the young and freshly planted stock.

CANNAS IN WINTER.—Try a few of the finest large flowering, dwarf sorts in the greenhouse this winter. Thomas H. Ware and Madame Crozy are splendid varieties but scarce; by growing them in the greenhouse in winter, however, we are not only getting their handsome flowers, but the plants are increasing in growth, hence multiplying in stock. And the flowers of these dwarf cannas are brighter and more enduring when grown under glass than when outside, and they also escape the ravages of the spotted beetle.

FELIX CROUSSE as a red, Madame Just as an apricot, and Louis Thibaut as a yellow, are common enough, excellent in their way and very free blooming.

ARGYREIA TILLIFOLIA.—A seed novelty of last spring. It is a handsome, robust vine running 20 to 30 feet and bearing a ample number of large basswood-like leaves. But our plants, raised from seed last spring and planted outdoors in summer, have shown no inclination whatever to bear any blossoms.

PASSION FLOWERS.—We plant out a good many varieties in summer in good ground and warm sunny positions and they always grow well and flower well. *Passiflora edulis* and the variety *Arc-en-ciel* have shown a greater inclination to produce fruit than have any of the other ornamental kinds.

PASSIFLORA VIOLACEA.—Some years ago I had this new species from John Thorpe; it is a very beautiful, purplish-blue flowering kind from Brazil. The leaves are three-lobed (not 3-cleft) and the large

flowers hang down on long petioles and turn up at the end suggestive of a Dutchman's pipe. Although a thrifty plant it is not a rank grower, but it is a free blooming and very beautiful passion flower, and it thrives admirably planted out in summer. It has not fruited with us. We increase it from cuttings, but these do not root as readily as do those of most other kinds of these vines.

"OCCASIONAL," page 111, should speak to us oftener. We are hungry for just such facts; we want to know the plain truth about gladioluses and other popular horticultural plants. Let me endorse his remarks about gladiolus *Ville de Versailles*. Its habit is open and without any of the stiffness of a gladiolus of the *gandavensis* type and its white blossoms are real pretty. We call it the bouquet gladiolus, because we can use it appropriately mixed with other flowers.

MRS. DEGRAU ROSE.—About 5 per cent of our hardy roses are of this variety and I now (middle of October) am cutting more roses from it than from all of our other outdoor roses combined. It is in the way of *Hermosa* and has bright rose pink flowers that are produced the whole summer long, and are especially abundant in the fall. Of course as a market flower it would not compare with greenhouse grown stock, but for florists doing a local business and for amateurs it is a very desirable variety. It was raised some thirty years ago by J. Burgess, a florist of this village, and although it is well known and widely grown around here it does not seem to have got outside of this neighborhood.

I WENT to New York the other day to get some hardy trees and shrubs through the custom house and pay the 20 per cent duty imposed by the McKinley bill. And there I met an importer of bulbs who was bewailing his fate because he had received his full stock of bulbs before the 6th of October, and consequently had to pay the 20 per cent duty which, with a few days' delay he could have escaped. He got in his stock too soon, and I ours too late, so we both had to pay.

ABROMA AUGUSTA, an East Indian large leaved perennial of fast growth and a seed novelty last spring. It is used for planting out in summer for fine foliage, sub-tropical effect, in like manner as we use *Ferdinand*, *emend* or of which it is suggestive, or wigandia. Raised from seed last spring and planted out in good ground in summer it has grown about 6 feet high and is well furnished with large broad (20-24 inches across) reddish stemmed leaves. But it has not blossomed with us.

SOLANUM JASMINOIDES var. *grandiflorum* or *floribundum* as it is also called, has been in bloom out of doors all summer and now is more profuse than ever. Its clusters of white flowers are ample and real pretty and last well when cut, and a slight frost doesn't hurt it. We imported this variety from Veitch a few years ago, and while it is as free-blooming and vigorous as the ordinary *S. jasminoides* the flowers are whiter, larger and in bigger clusters. We winter the plants plunged or heeled in a deep cold frame, in this way they live quite well and keeps perfectly clean from the solanumite that preys so heavily on this plant, peppers, egg-plants and a good many other things, and which has almost driven the "melon pear" out of cultivation in the east.

COSMOS. We have not yet (Oct. 20th) had any frost and the cosmos is blooming beautifully out of doors. It is a welcome

flower at this time of the year. We also have lots of it in pots which we have just brought in, to be sold from frost, rain and windstorms. It doesn't matter whether we see it in March or June it comes into bloom now anyway, and for pot culture I like the late sowing best. Mr. A. W. Smith of Americus, Georgia, writes me that he has many flowers of Pearl that are $3\frac{1}{2}$ inches across, also, in some cases he finds that two flowers have grown together in one; this, on account of exuberance of growth is not uncommon in many compasses, and the fasciated stems of lilies and the like are induced in much the same way.

LOUIS SIEBRECHT of Queens used to have a couple of houses planted with Jack roses which he grew very well, but he says they didn't pay. So he has cleared out all of his roses and gone into growing carnations, chrysanthemums and the like more extensively than he used to.

BEGONIA INSIGNIS.—Mr. Siebrecht has taken up this begonia this year. It sold well in the New York market last December he tells me.

HE USED to have some large camellias planted out in one of his greenhouses, also a large Marechal Niel rose, but both have got thrown out, as they had ceased to be remunerative.

OUR OLD PLANTS of the Japanese maples have suffered more than usual this summer from the disease called "Japanese die-back." Half a tree or a large branch will die off unaccountably, leaving the balance of the tree apparently perfectly healthy. While quite common among old and large plants it seldom shows itself among young vigorous stock. But it is the great drawback to the free use of these lovely little bush-trees.

FLORAL PARK, N. Y.—John Lewis Childs, the florist, has received the republican nomination for Congress from the first Congressional district which includes all of Long Island (except Brooklyn) and Staten Island.

Philadelphia.

The first chrysanthemums of the season made their appearance on the 15th inst, the variety being *Gloriosum*; they were from disbudded plants, but were only fair and brought 60c a dozen wholesale.

A trip among the chrysanthemum men shows the various stocks to be in fine condition. Jacob Becker has some very fine pot grown plants with foliage to the bottom, in fact this seems to be the case with most of the stock seen. Robert Craig has a fine batch of seedlings, quite a number of which look very promising, he has made a specialty of the Mrs. Hardy and has a very large stock of this fine variety on benches, the flowers from these plants will certainly be very fine as they are in splendid condition and only one flower to a stem.

Mr. Harris has about the largest stock and they look exceedingly well; he has very fine batches of La Neige, L. Canning and Ivory, a fine white, the latter he thinks one of the best of its class and a grand pot plant for market. His fine yellow, Mrs. Wm. K. Harris, was considered a poor grower last season, but this year it has done as well as any, and will certainly have a place in every collection. His specimens for exhibition are the best he has ever had. We understand there are to be several private collections at the show which will take down anything ever exhibited here before.

Well, the bowling match came off and resulted as predicted, in the defeat of the professionals, or Boston team, as it is called here. They had some very fair bowlers on their side. Robert Craig kept up his reputation by making the best individual score, as he did at Boston, but some of the others did not show true championship form, and as a whole the team had to succumb.

The amateurs, their opponents, were hastily gotten together with but a little practice and acquitted themselves quite creditably. The professionals are not satisfied and will be forelong, that is after sufficient practice, meet their adversaries and prove their right to be called champions. Three games were played, the total score deciding the match.

THE SCORE.			
Amateurs.		Professionals.	
Colfesh	392	Craig	399
Anderson	376	Lonsdale	377
Kift	369	Burton	371
Heron	348	Young	337
Farson	330	Westcott	321
Campbell	328	Harris	299
2,147		2,104	

Resulting in the defeat of the professionals by 43 points.

John Thorpe read a paper on chrysanthemums at the monthly meeting of the Pennsylvania Hort. Society, Oct. 27. It was very well received by the large audience present, and the thanks of the society were unanimously tendered him.

Fine flowers of *Gloriosum* and other choice varieties are bringing \$50 a hundred in New York at wholesale and are in good demand. Thorley, of Broadway, arranged a basket with 33 blooms of Jessica, a fine white variety, for which he obtained \$100.

G. A. Milloy, formerly with Chas. E. Pennock, and F. Hunter, a retail florist, have organized the Philadelphia Wholesale Floral Co., at 17 North 13th street. They have quite a number of large consignors and are fully equipped for a good business.

John Burton has discarded the American Beauty in one of his houses, and replaced it with the Wootton. We understand that he heard something about this rose when in Boston, and resolved to give it another trial. Others heard of it also, it came to them as in a dream, or at least at a time when they should have been dreaming. By the way, Mr. Burton hopes soon to add the prefix "Hon." before his name, as he has been nominated and is now a candidate for the Legislature with good prospects of being elected.

The firm of Craig & Bro. has been dissolved. Robert Craig has purchased the interest of his brother George in the greenhouse department and will conduct the business as heretofore at 49th and Market streets, while the retail branch at 211 South Eleventh street has become the sole property of Mr. George Craig, and will be carried on in his name.

Many of the florists of this city are considerably agitated over a recent deal in coke, a fuel largely used by greenhouse men here. Some time since the Director of Public Works sold to a large coal tar firm 30,000 bushels of coke at 3 cents a bushel, whereas the florists had been paying 6 and 7 cents a bushel. Several weeks ago Mr. Robert Craig, the well known florist, called on the Director and expostulated with him in regard to the discrimination against the florists in the price charged. The Director retorted that he would sell at the 3 cent rate to any one who would take so large a quan-

tity as 30,000 bushels. Before the Director could catch his breath Mr. Craig ordered 30,000 bushels and planked down the money for it. An agreement was signed that the coke was to be taken in 30 days and that none was to be resold to other florists. Mr. Craig had his coke hauled away until he had 20,000 bushels and then the supply was exhausted. The other florists were clamoring for coke, but they could not get any because the Director was under contract to supply Mr. Craig with 10,000 bushels more. The situation is decidedly unpleasant for the other florists who use coke for fuel and they claim that by the sale noted a loss of at least \$900 has been caused to the city. The Director is in a peck of trouble and will probably think twice before he makes another bluff at a florist. Mr. Craig in the meanwhile looks on serenely holding his full hand-of-coke.

Florist Geo. W. Uher has begun suit for \$5,000 damages against a railroad contractor for damage done to his greenhouses and contents by the explosion of a blast of dynamite made by the contractor while constructing the roadway for a railroad near his place. The plaintiff states that over 2,700 lights of glass in his greenhouses were broken and many plants damaged or destroyed in consequence of the blast.

—The popular Eighth street florist, Eugene Weiss, who is also president of the Immortelle Design Co., took unto himself a bride October 22. It had been thought that Eugene was invulnerable to the darts of Cupid, but it seems as though he had been hit so hard that there was no other remedy than the ancient one—matrimony. A few evenings before the happy event took place some of his old friends called upon him to wish him God speed, and also to take part in aiding him to bid himself a beerful good bye to bachelordom!

Boston Notes.

Violets are improving. Roses of all kinds are unusually good for the season.

Chrysanthemums are beginning to come in in moderate quantities.

A new rose hailing from Boston is soon to make its appearance on the market.

In the present scarcity of carnations and other white flowers the large quantities of white cosmos now coming in are most welcome.

The first genuine freeze of the season occurred on the night of Tuesday Oct. 21. This settles the "outdoor stuff."

The flower store under the Tremont House formerly occupied by Loring & Co., has been re-opened by Mr. A. C. Bowditch, Associated with Mr. Bowditch is Mr. W. H. Long, who was for many years a prominent New York florist. With the knowledge these two gentlemen possess regarding the cut flower trade of Boston it would seem as though the success of the new enterprise was assured.

The annual public "giving away" of the geraniums and other bedding plants which have adorned the Public Garden during the summer, took place on October 24, and Superintendent Doogue with his assistants had, as usual, a lively job while it lasted. The stuff is worth having this time, for, as the visitors to Boston last summer probably noticed, the plants instead of being planted in the usual manner were all kept in the pots and plunged.

Mr. Wm. G. Paterson, who has been

for twelve years gardener to Hon. Frank Jones at Portsmouth, N. H., died on Thursday, October 9, aged 42 years. Mr. Paterson attended the convention at Boston and at that time complained of feeling unwell, but his fine physique and appearance of robust health seemed to contradict his assertions. Soon after the convention, however, the unwelcome news of his serious illness was received. He was a member of the Gardeners' and Florists' Club of Boston, and a great favorite with his fellow-members, a delegation of twelve of whom attended the funeral.

That such a number of gentlemen should go a distance of 60 miles for such a purpose is ample proof of the high esteem in which Mr. Paterson was held by his brother gardeners and florists. Straightforward, frank and manly in his manner, generous almost to a fault, he quickly found a large place in the hearts of those who met him. One of the highest tributes to his worth was the deep and sincere grief shown by his employer, Mr. Jones, and his good lady. The hospitality shown to the friends from Boston by Mr. Jones will never be forgotten. He personally met the delegation at the station with his own carriages, and treated them throughout with the greatest kindness. It was a most impressive sight to see the recognition and honor shown to the memory of the employe by the employer whom he had served so long and faithfully, and it was all the more touching on account of its rareness. Mr. Paterson was an accomplished gardener and the beautiful estate of Mr. Jones, which was almost a wilderness when he took hold of it, is a lasting memorial to his industry and skill.

W. J. S.

Chicago.

Mrs. H. H. Berger and daughter, of San Francisco, spent a day in Chicago recently while on the way home from the east, where they had been visiting since the Boston convention.

The members of the Wisconsin Gardeners' and Florists' Club have signified their intention of visiting the Chicago Florist Club's exhibition in a body on November 5.

J. C. Vaughan's greenhouses at Western Springs are in apple pie order, and are filled with excellent stock for the shipping trade. Several new buildings are being added and are being erected in a way to delight the hearts of those who believe in permanency. Among the plants noted at this place was a bench of the new white carnation Mrs. Fisher. It was not in bloom at the time, though covered with buds, but what attracted instant attention was the splendid habit of the plant. Several acres of dahlias, though already touched by frost, presented a brilliant appearance. Some of the single sorts should be very useful for cut flowers, especially the self-colored ones. Among the recent additions to the stock at this place is a fine lot of young palms and like decorative stuff of the usual trade sizes. The system of placing the ventilating apparatus on the outside of the roof in the narrow houses is worthy of note now that it has been demonstrated that the same works satisfactorily at all seasons of the year. Of course the only advantage lies in the fact that the head room is left free from the obstructions necessary when the apparatus is placed on the inside of the roof of narrow houses.

At the coming exhibition of the Florist Club the cut roses are to be judged by a scale of 100 points, as follows: Color,

35 points; size and texture of flowers, 30 points; length of stem and quality of foliage, 35 points; total, 100 points.

J. C. Vaughan is on a flying trip through the east.

At the last meeting of the Florist Club the annual election of officers was held with the following result: G. L. Grant, President; Joseph Curran, Vice-President; F. F. Benthley, Secretary; E. Weinhoeber, Treasurer; P. J. Hauswirth, Financial Secretary; T. J. Corbrey, Chas. Hartwig, F. Kennicot, Thomas Wallis and W. J. Smyth, Trustees. November 15 was set as the date for the annual banquet and a committee appointed to arrange for same.

The cash premiums offered at the exhibition of the Florist Club which occurs next week amount to \$1,500. The awards on floral arrangements will be made by a committee of twenty of the best known lady buyers and lovers of

New York.

Business is daily on the increase. Chrysanthemums have arrived in all their glory.

Violets are coming in in large quantities and are destined to be as popular as ever.

Carnations are plentiful and in good variety. One of the novelties is a whitish pink color named J. J. Harrison and grown by Bidwell Bros., of Jersey City, N. J.

Roses are plentiful and of better quality, but on account of the glut of chrysanthemums prices remain unsteady.

One of the prettiest designs seen in a Broadway window this season was a Marie Antoinette basket of Ma Capucine roses made by Lawrence Hafner of W. H. Brower's.

The most elaborate dinner order of the season was executed by Chas. A. Dards on the 20th at the Hotel Plaza. It was a dinner given to the Count of Paris by the officers of the Army of the Potomac. The table, in the form of a horseshoe, was literally covered with American Beauties with the words "Army of the Potomac" made in white chrysanthemums. The whole making one of the prettiest and most appropriate designs seen in years.

There has been some very extensive improvements made in many of the principal stores, and every one anticipates a good business this season.

There is a great deal of interest being taken in the Florists' Bowling Club, no doubt owing to the successes of the club at Buffalo and Boston. It is to be regretted that the harmony and good feeling that exists at these meetings does not extend to the stores and the rosaries.

Among our visitors during the week were J. M. Jordan, of St. Louis, Albert Small, of Washington, D. A. Spear, of Hartford, S. Goldring, of H. G. Eyres & Co., Albany.

JOHN YOUNG.

Philadelphia.

I have read with great interest the articles from Philadelphia written by A. B. C. D. and E., and I am one of our many florists who have wondered at the curious coincidence that each writer owns the initial in the alphabet that properly follows that of the writer of the preceding fortnight. They one and all seem to be real good fellows and have kept us well posted in what was going on in and around the Quaker city.

I would like, however, to correct a trifling error into which his exuberant spirits have led the genial E., the last of the quintet. He is evidently a thoroughly good chap and would not willingly hurt a fly, but his remarks on our bowling team are calculated to make our gallant captain sore.

It has never been claimed that our team comprised the six best players in town but that they had better averages than any of the other men who came to the practice games. That two of our bowlers rolled so wildly in beloved Boston was a bitter pill to our good captain, but surely E. will not for one moment criticise his selection? No, brother E., the lilliputians deserve great credit for their earnest practice and clever victory over the regular bowlers; but it wasn't a soft thing. No one says, "Hah, licked yer easy." No not even their leader in that joyful moment when the victory was won and his soda safe; and were a return match played, it is greatly to be feared that he would stamp his foot and shake his fist in anger at the final score. G.

DIAGRAM OF TABLE DECORATION ARRANGED BY DARDS [SEE NEW YORK NOTES.]

flowers in Chicago, each one casting her ballot separately at the time most convenient within prescribed limits. This plan of selecting judges interests in the exhibition the very ones it is most desirable to interest, and as each one has a very considerable following in the fashionable world the material advantages are at once manifest. And who can be better judges of floral arrangements than those who annually expend very considerable sums with the florist and are known to love the flowers for their own sake and not simply because they are fashionable.

A meeting called to perfect the organization of the Horticultural Society of Chicago was held at the Sherman House October 14. It was intended to elect officers at the same meeting, but so much time was consumed in the consideration of constitution and by-laws that the election had to be postponed to an adjourned meeting held October 28. The society has been incorporated under the laws of the state and the directors for the first year are Messrs. Geo. Schneider, E. S. Dreyer, Gen. A. L. Chetlain, William H. Chadwick, J. C. Vaughan, W. H. Rand and E. B. McCagg. With the exception of Mr. Vaughan all are amateurs and all are blessed with an abundance of this world's goods as well as a love for the beautiful in nature.

Florist Reineiman, of Pittsburg, visited Chicago recently.

JUDGING BY POINTS.—As will be seen by items appearing elsewhere in this issue, the point system of judging plants and flowers at exhibitions is gaining ground. The system has so many advantages over the old method that we shall be surprised if it is not soon universally adopted. It not only simplifies the work of the judges and insures more accurate work on their part, but there is afforded to the competitors a decided satisfaction in knowing the exact degree of excellence of their entries as determined by the judges. We believe that it would be wise for those in charge of the numerous chrysanthemum shows which occur this month to adopt the point system of judging chrysanthemum plants which will be used by the Pennsylvania Hort. Society and which we print in our chrysanthemum department in this issue.

WE HAVE in hand and shall publish in next week's issue a very interesting paper read by Mr. John Thorpe before the Pennsylvania Horticultural Society October 21, on "The chrysanthemum, its western history."

ADVERTISERS should not forget that copy for advertisements must reach us by Monday at latest in order to secure insertion in the issue of the following Thursday.

MR. GEORGE W. CHILDS was unanimously re-nominated for the presidency of the Pennsylvania Hort. Society for 1891 at the October meeting.

WE SHALL NOW give you fifty-two numbers a year, instead of twenty-four, without any increase in price.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) per insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By one accustomed to forcing terms. H. care Am. Florist.

J. C. GIBSON, Woodbury, N. J.

DIRECTORY.

Every Florist, Nurseryman and Seedsman should have one.

AMERICAN FLORIST CO., Chicago.

CHRYSANTHEMUMS.

Stock plants now in flower and ready to deliver. We carry 600 varieties. A list of stock plants and prices will be sent you early in November. This is the time of year to buy Chrysanthemums for propagating—while in flower.

Average price of stock plants, 10 cents.

We offer for the first time, the EARLIEST Yellow Flowering Chrysanthemum,

"GOLDEN ALPHA,"

blooms as early as October Beauty. A good yellow four inches in diameter. Have been cutting flowers from these plants since October 1. Price \$2.00 per stock plant. For Spring delivery in March, \$10 per 100.

We call attention to the variety called "STONEWALL JACKSON" (Crystal Wave) as being absolutely one of the very best late flowering sorts for cut flower work.

Stonewall Jackson (Crystal Wave, Mrs. Potter).—Very pure satiny white, petals quite long; beautifully undulating; about 1/2-inch wide, same width from base to tip; shows center a little for a time, but petals soon cover it. Lasts remarkably after being cut. Stout plants, 50c.

**V. H. HALLOCK & SON,
QUEENS, N. Y.**

HYDRANGEA GRANDIFLORA.

We ask the attention of Dealers and the Trade to our Large Stock of HYDRANGEA GRANDIFLORA, nice, well-grown plants at very low prices, viz:

HYDRANGEA GRANDIFLORA, 2 year, 2 to 2 1/2 feet, strong. Price, \$7.00 per hundred; \$60.00 per thousand.

HYDRANGEA GRANDIFLORA, 2 year, second size, 18 to 24-in., good. Price, \$6.00 per hundred; \$50.00 per thousand.

Samples on application. Correspondence solicited.

Address **THE DINGEE & CONARD CO., WEST GROVE, PA.**

remember it.Orders for less than one-half inch space not accepted.
Advertisements must reach us by Monday to secure
insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

A WEEKLY PAPER.Beginning with this number the AMERICAN
FLORIST will be issued weekly, and
there will be no increase in the subscrip-
tion price. It is with much pleasure we
announce that the hearty support given the
FLORIST by the whole trade has made this
change possible.With a weekly issue we shall be enabled to
keep our news close up to date, and as
the news feature is a prominent one with
us, the change will be a very material
advantage.We shall not stop at maintaining the
contents of the paper to the present
standard, but shall aim to not only in-
crease the quantity but improve the
quality as well.Another decided advantage will be the
frequency with which the rapidly changing
stock of the grower can be placed before
the trade and the better opportunity
which will be afforded to buyers of making
selections from the best stocks in the
market at that particular time. There
are seasons of the year when even the
daily changes in stocks are of very con-
siderable importance and in a week all
of some varieties may be exhausted. In
the weekly issue of the FLORIST the
advertiser can keep the changes in his stock
up to date, for the information of his
customers, and thus afford an advantage
to the buyer as well as stimulating trade.
It is unquestionably a decided advantage
to the buyer to have offers made up to
date and it is a like advantage to the
advertiser to be able to present to the trade
quickly any seasonable offers he may have
to make.**DEPARTMENTS AT THE WORLD'S FAIR.**The committee on classification has
after a great deal of labor prepared the
following fearfully and wonderfully con-
structed arrangement of "Bureaus" which
it will recommend for adoption by the
national commission:

- 1 Bureau of installation, which will include manufactures.
 - 2 Bureau of agriculture, with departments of live stock and horticulture.
 - 3 Bureau of mines and mining.
 - 4 Bureau of machinery and electricity.
 - 5 Bureau of education, covering engineering, public works, architecture, ethnology, archaeology, progress of labor and invention.
 - 6 Bureau of fine art, including decorative art.
 - 7 Bureau of railway exhibits and other means of transit.
 - 8 Bureau of admissions.
 - 9 Bureau of protection and public comfort, police, fire departments, etc., information to visitors, guides and interpreters.
 - 10 Bureau of publicity and promotion.
 - 11 Bureau of transportation.
- We give the whole list so that our

readers may see the relative importance
given to horticulture by the committee.
It is side tracked along with live stock
as sub-divisions of the Bureau of Agricul-
ture. Of course the classification given
may be very considerably modified by the
national commission before it is adopted,
but the chances appear somewhat slim as
to horticulture being given the position
to which it is entitled unless the attention
of the powers that be is forcibly called to
its importance.The classification submitted by the com-
mittee will be acted upon at a meeting of
the commission which will be held Nov-
ember 18, and any influence which may
be exerted should be brought to bear
prior to that date. We suggest that
every Horticultural Society, Florists'
Club and other organization interested
take action protesting against the classi-
fication noted and urge that horticulture
be made a department by itself, free from
the supervision of the director of any
other department, such communications
to be addressed to the World's Columbian
Commission, Pullman Building, Chicago.We trust that the horticultural press
generally will give full publicity to the
matter and urge immediate action by
those interested.**EARLY CHRYSANTHEMUMS.**On October 15 we received from Messrs
Nathan Smith & Son, Adrian, Mich.,
very good blooms of Chrysanthemums
James Salter, M. M. Thibaut, M. E.
Nichols (October Beauty), Blanc Precocé,
Charlotte de Mont Cabrier, Pres. Hyde,
Harvest Queen, Duke of Berwick, Mac-
beth and Spiralis.On October 20, Mr. O. P. Bassett,
Hinsdale Ill. sent us a handsome plant of
Puritan in splendid bloom, and the fol-
lowing day we received from the same
gentleman really excellent blooms of
Gloriosum, Puritan, Edwin Molyneux,
Jessica, an unknown white and Mrs.
Alpheus Hardy.On the same day we received a basket
of blooms of new varieties from Messrs
Hill & Co., Richmond, Ind., which are
enumerated in another column. Among
these blooms were many which may be
of value to the seeker after odd colors
but the only ones that impressed us favor-
ably were Mme Ferdinand Bergman and
M. H. de Portanier.**TO ADVERTISERS.**With the change from a semi-monthly
to a weekly, the number of issues during
the year will be something more than
doubled, enabling advertisers to reach the
trade 52 times a year instead of 24 as
heretofore.The advertising rate will remain the
same for a single insertion and an addi-
tional discount will be given on time
contracts owing to the greater number
of issues during the year.In the future the discounts will be as
follows: For advertisements ordered for
6 times, 5 per cent; 13 times, 10 per cent;
26 times, 20 per cent; 52 times, 30 per
cent. The discounts are for consecutive
insertions only.QUITE a number of changes have been
made in the dates for the coming chrys-
anthemum shows. See elsewhere in this
issue a list of the coming exhibitions with
changes made up to date.THE AMERICAN FLORIST was started as
a trade paper; it has remained strictly a
trade paper and will continue as a trade
paper only.**FIVE NEW AMERICAN ROSES**Probably the most interesting Novelties of the
coming season and those that will attract the widest
attention of the Trade on both sides of the water,
are our**NEW AMERICAN SEEDLING ROSES,**HENRY M. STANLEY,
MRS. JESSIE FREMONT,

The Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. MCCULLOUGH, Cincinnati, president, JOHN FORTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1894.

BOUK & HUPERT succeed Jas. W. Bouk, Greenwood, Neb.

COLE & BRO., B. M. Cole, proprietor, Pella, Iowa, will change the name of their concern to Cole's Seed Store.

QUITE a gathering of seedsmen were present at the St. Louis Fair; besides the local people were present Mr. F. Barteldes, Phil Stimmel, R. G. Craig, Geo. S. Haskell, S. P. Leonard and J. C. Vaughan.

LILUM AURATUM to arrive next month from Japan will be entered free of duty, under the new law. Rumor has it that some 50,000 bulbs in the early shipments arrived here worthless, having rotted from being packed in sawdust instead of the usual clay.

MR. GEO. URGHART, Vice-President of the Plant Seed Co., a good authority on onion sets, reports a two-thirds crop in the U. S. this season. Most of the stock is yet in the hands of growers who fear they may sell too low; he expects a cold wave later on will bring buyers and sellers nearer together.

PHILADELPHIA.—Mr. W. Atle Burpee has moved into the city for the winter from his summer place at Doylestown. Mr. Maule says it is a poor year for "novelties" in the seed trade, but helps others in the trade to give Mr. Blane more new engraving than he can do. The *Public Ledger* expects a blue chrysanthemum at the coming show.

Report From Erfurt, Germany, on Seed Crops.

Stocks will be a good crop. Asters promise to yield a good seed, but crop will be short. Of novelties introduced recently *Scabiosa* snowball, *Aster* Ne plus ultra and *Lobelia* Royal Purple are good. Double cornflower of little use to florists. Victoria ten week stocks are good. Eckford's new sweet peas yielded but very little. Cauliflower extra good. On the whole it is somewhat early since many seeds, such as asters, verbenas, etc. are subject to weather. C. C.

Palms and Dracenas.

LATANIA BORBONICA, 3 in. pots, strong, 15c each. CHAMEROPS EXCELSA, 2 in. pots, strong plants, 25c; 2 in. pots, small, 6c.

CORYPHA AUSTRALIS, 2-inch pots, 8c. WASHINGTONIA ROBUSTA, 4-inch pots, 25c; 3-inch pots 15c, 10 to 15 other varieties in 5 to 10 and 12 in. pots, some good specimens at low down prices. Over 100 CYCAS REVOLUTA, from \$1.00 to \$8.00 and \$12.00, according to size.

DRAECENA TERMINALIS, 5 in. pots, strong plants, 15c; 4 in. pots 20c; 3 in. pots 12c; 2 in. pots 5c. DRAECENA INDIVISA, 5 in. pots, strong plants 35c; 4 in. pots 20c; 3 in. pots 12c; 2 in. pots 5c per 100.

Send me your orders, I feel sure I can give satisfaction.

W. J. HESSER, PLATTSOUTH, NEB.

HEADQUARTERS for CHRISTMAS TREES!

Wisconsin Blue Spruce.

The finest of all in form and color. Well furnished, selected trees, carefully packed in light, strong crates, containing 25, 50 and 100 trees, delivered, Freight Charges Paid to any point within 300 miles of Chicago, at prices here quoted:

	25	50	100
4 to 6 feet.....	\$ 3.50	\$ 6.00	\$10.00
6 to 8 feet.....	6.00	11.00	20.00
8 to 10 feet.....	10.00	18.00	30.00
10 to 12 feet.....	15.00	25.00	45.00
12 to 14 feet.....	20.00	35.00	60.00

The two largest sizes are of Balsam Fir; fine selected specimens.

Special correspondence solicited on car lots.

As the Western Classification of roads now exact, by a recent ruling, **ACTUAL PREPAYMENT** of all freight charges on Christmas Trees, I am obliged to assume these charges, and also all risks of transportation; hence I am under the necessity of insisting upon the following:

TERMS OF PAYMENT.—At least one-half cash with order; balance 30 days approved credit. All bills to be paid not later than January 1st 1891. No attention will be paid to orders not complying with above terms.

W. D. BOYNTON, SHIOCTON, WISCONSIN.

Rooted Cuttings.

My circular and price list is now ready, and can be had on application; it is interesting reading to any florist who buys Carnations, Coleus, Al. erantneras, Geraniums, Cannas, etc.

Pansies.

One day's mail brought me orders for 18,200, and one week's mail for 37,500 plants. Is it any wonder I am sold out? This year's sales prove conclusively that there is no better strain in the market. And next season I shall grow not less than half a million plants.

L. E. 338. ALBERT M. HERR, LANCASTER, PA.

GEO. W. MILLER,
1748 N. Halsted St., CHICAGO.

Washington.

Cosmos has been the reigning belle during the past week, everywhere is this new comer to be found. The markets are full of them and they grace every florist's window in the city, but the reign is short, trendy chrysanthemums are putting in an appearance and before another week we will witness the beginning of a chrysanthemum display such as perhaps has never been seen here, to judge from the profusion of buds, magnificence of plants and endless variety.

Foliage plants, especially palms and ferns, seem to have received special attention by some of our more successful growers during the past season and the winter's supply, it would seem, will fully equal the demand which in this city is exceptionally large.

The question of allowing the florists to remain on the ground floor of the Center Market seems to have been definitely settled and several have enlarged their setbacks, provided tiled counters, telephones, etc., so that the floral feature of our largest market is now really one of its greatest attractions.

The cut flower trade is evidently reviving and establishments like Smalls, Hale, Gude, Fisher, Saul, Deitrich, Stander and Freeman are doing a fairly good business for this season. Of late Wm. Smith, the florist, has also opened a store on Pennsylvania avenue near 17th street. Ed. Schmid, the principal dealer in florists' supplies, has purchased a fine building and lot centrally located on 12th near G street, and proposes fitting up the same in the most approved style. On the whole the prospects for the winter's trade seem very encouraging. Z.

**FORCING BULBS,
IMPORTED HARDY ROSES,
Strong Clematis, Etc., Etc.**

GLADIOLUS BULBS.

Prevailing Colors, Pink and White.

Over 100 named varieties, and a number of choice seedlings all mixed together. This collection has never been called, and it has received a number of first premiums. In fact it has never failed to do so when exhibited. To avoid retailing these bulbs, I offer them this fall at \$10.00 per 100 for first size, second size \$7.50. A quantity of small bulbs and bulbets at a bargain.

M. CRAWFORD, Cuyahoga Falls, Ohio.

ORIGINAL AND LARGEST GROWERS OF

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new span greenhouses, here at Tarrytown, 20 feet in width by 140 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter. In fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it is in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 20,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing."

The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**: supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine *Liliium Harrisii*. In order to secure "the true variety," purchase our Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the market has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

A New Hollyhock Disease.

In the *Journal of Mycology*, Vol. 6, No. 2, issued December 10, 1890, by the U. S. Department of Agriculture, Division of Vegetable Pathology, appears an article by E. A. Southworth, on a new hollyhock disease which is stated to be entirely distinct from the two diseases of the hollyhock already described. The disease is caused by a fungus to which the attractive name of *Colletotrichum Altheae* has been given. The external characters are described as follows: "The fungus may attack any part of the plant; when on the leaf it occurs in the form of a brown spot, which may increase in size until the whole leaf is either diseased or withered; when on the petiole the leaf and part of the petiole beyond the point of attack shrivel up at once; when at the base of the petiole, on the young unfolding leaves, or on the main stock of the plant itself, the fungus quickly runs down to the root and kills the plant. Wherever the stem or petioles are attacked they shrivel up; all flow of sap is checked and the part of the plant or leaf beyond this point must succumb. If the plant is very dry the diseased parts dry up, but if grown in a moist place the trouble is aggravated by swarms of bacteria that attack the diseased portions and, instead of drying up, the plant seems to perish by a kind of rot. When the plant has attained some size and firmness of texture the surface of the petiole or stem sinks in at the point of attack, forming a distinct flattening or even a hollow. The color of these spots varies from a light yellowish brown to black. Frequently the centers of the spots are rust color, becoming entirely black later."

Spraying the diseased plants with the Bordeaux mixture gave the best results. Copper carbonate was tried but with very slight effect.

CHRYSANTHEMUM MAXIMUM is a splendid keeper as a cut flower. A half dozen blooms placed in a vase with other flowers over a week ago, and kept in a warm sitting room since, are still as fresh and effective as when first cut, while all the other flowers in the vase have faded and dropped.

PLANT BED CLOTH.

CHEAP SUBSTITUTE FOR GLASS ON Hot-beds, Cold frames etc. Three grades. Light, Medium, Heavy.

Used by Florists, Gardeners, etc., invaluable for Tobacco towers. Protects from frost. Promotes hardy, vigorous growth and keeps beds warm all night or midday. For sale by the leading Dry Goods houses, Seedsmen, Florists, etc. Well known and extensively used. For circulars and samples, apply.

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have taken a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN**. We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 300 pots of each size from 1½-inch to 7-inch inclusive, and 250 pots each from 8-inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

A. T. CEFREY'S

Patent Improved
Florists'

Immortelle Letter and
Pin Fastener.

CEFREY LETTER CO.
GENTLEMEN—I find the new machine-made Immortelle Letters manufactured by you very salable and in many respects superior to anything of the kind we have ever handled. Their uniformity of shape, size and color, the convenient form in which they are put up, and the excellent device for fastening them to the work, are among the most commendable points in your letters. Please double my last order and deliver as soon as possible. Yours truly, W. J. STEWART.

CEFREY LETTER CO., 13 Green St., Boston.
DEAR SIRS.—Please ship me five thousand letters as soon as possible. They are the best and most practical letters in the market. The pin fasteners are a long way ahead of the old-fashioned way of wiring. Yours truly, N. F. MCCARTHY.
CEFREY LETTER CO., Boston, Mass.
DEAR SIRS.—Send at once ten thousand small letters and five hundred large (two inch).
GALVIN BROS., Boston.

We wish to announce to all florists that we have removed to much larger quarters, **No. 13 GREEN STREET, BOSTON**. We make our letters by machinery; they are not only more perfect in size, shape and color, but are the best and cheapest in the market. Our 2-inch letters are only two and a half cents, and the 1½-inch letters are only two cents apiece. Your customers will have no o-hers. Be up with the times! Send us your orders and we will ship you a supply for this winter. **They are the best in the market.**

THE CEFREY LETTER CO., 13 Green Street, BOSTON, MASS.

A Butter Bush.

The New York Tribune of October 12 has the following: "Look out for tall tales from Africa. One now current is that there has been discovered on the west coast of Africa a bush the seeds of which yield a yellowish fat of very agreeable nutty flavor, which might be used as a substitute for butter. It solidifies like butter, and contains no acids which cause it to become rancid. If the plant can be domesticated in this country, no home will be complete without its butter bush. Some people, however, may prefer the palm."

THE COMMISSIONERS of Fairmount Park, Philadelphia, this fall commenced the practice of making a free distribution of the surplus plants remaining in the park beds after the number required for propagation had been housed. Something over 70,000 plants were distributed to over 5,000 applicants.

**THE EVANS CHALLENGE

MR. THORPE'S PAPER on the chrysanthemum, which appears in this issue, will be very acceptable to all at this time.

JULIUS NIEPRASCHIK, superintendent of the "Flora" at Cologne, Germany, for the last 28 years, died of heart disease October 14, in his 65th year.

CHICAGO.—The quality of the plants and flowers shown at the third exhibition of the Chicago Florist Club, which opened Tuesday, is far in advance of any previous exhibition. The attendance on the opening day was large.

The Chrysanthemum—Its Western History.

[Read before the Pennsylvania Horticultural Society, October 21, by John Thorpe.]

The chrysanthemum was introduced from China about 1764 to European gardeners. There were seemingly two species, *Sinense* and *Indicum*, the *Indicum* being the small or pompon form.

There is no doubt many varieties were introduced from Europe to America before the beginning of the present century. In search of old kinds I have plainly traced some varieties as far back as 1811 and I have the pleasure to show you a variety which has been in one family over 60 years. I am informed that there are very many kinds to be seen in Virginia which have been known for over 50 years. These are nearly all pompons, though there are some of the Chinese kinds, such as old *hilar*, the golden yellow and the changeable white. Previous to and may be after 1868 all the varieties grown came from Europe; within the last 10 years a great number of the very best varieties have been raised here, many fine kinds have also been directly imported from Japan.

To Japan we are indebted for not only many beautiful kinds, but it was the introductions from there to England by Fortune in 1860-1-2 of some of the very distinct forms that gave a fresh impetus to their culture. The critics of that day ventured to say that the shaggy irregular shaped, ill-colored things would soon be relegated to the past. So much for prediction.

THE PENNSYLVANIA HORT. SOCIETY AND THE CHRYSANTHEMUM.

The Pennsylvania Society has always been a leader in horticulture and in nothing has she led more than in the cultivation of the chrysanthemum. The other day in looking over that old favorite the *Gardener's Monthly*, Vol. II, 1860, I came across the following: Pennsylvania Hort. Society, the November stated meeting held on the 20th inst. "The grandest attractions were the chrysanthemums. Mr. Edie's were the finest specimens we ever saw, some of them measured 15 feet in circumference. They were perfect in shape and many of them had between two and three thousand flowers expanded on them. They were pompons and consisted of Mme. Lafarge, La Citrine, Sac-

ramento Rosette, Bob and Napoleon." This then is what Philadelphia was doing for the chrysanthemum exactly thirty years ago.

Philadelphia is doing to-day exactly what she was doing 30 years ago, for nowhere is there such magnificent plants grown as at Philadelphia, and this is not all, the best chrysanthemums growing to-day came from Philadelphia. When I think of my friends Harris, Waterer, Craig, Lonsdale and a score of others and the work they are doing I wonder how I have the temerity to say a word about the Queen in your presence.

The many and varied shapes of the chrysanthemum is no doubt a factor in its popularity. There is no class of plants that I am acquainted with possessing so much variation, and it is not only their shape but their size which gives them the position held by no other flowers. Of their shapes let me mention the very prim symmetrical forms of the older types of Chinese incurved and reflexed flowers. Mrs. Geo. Rundle represents the former and Cullingfordii the latter; and in contrast the varied forms of the Japanese, some of which are as erratic and grotesque to look on as though they were the work of some juggler, as for instance, Excellent, Conte de Germiny and Lillian B. Bird. These represent only three forms among the section known as Japanese. There are other forms known and classified as Chinese anemones and Japanese anemones; the pompons having small flowers have also as many varied forms among them. Within the past two years a very distinct form or type has been given to us from Japan direct, in Mrs. Alpheus Hardy and Louis Bochner. They are quite an acquisition and will in all probability be permanently known as the Ostrich plume section. Yet another very distinct form from Japan is one having flowers resembling in shape the Scotch thistle and what is more remarkable some of the varieties are distinctly two colored, some having the upper parts yellow and the lower red, others again have white bases and pink tips.

As to sizes, the smallest I know is one-third of an inch in diameter and the largest I have seen (on paper) is over 13 inches, but it is not rare to see flowers over eight inches in diameter, indeed the majority of the largest flowers approximate that size.

The propagation of the chrysanthemum is by cuttings for perpetuation and by seed for the production of new varieties. The chrysanthemum has one peculiarity more pronounced than any other, I refer to bud variation or what is known as sports, from which we frequently get very distinct and desirable colors, and what is most remarkable, the old type of Chinese incurved kinds are more prone to sport than are the Japanese or more

recent seedlings. One of the most remarkable species is Violet Tomlin, a rich plum purple of a new shade, and this came from the Princess of Wales, a nearly pure white kind.

The raising of seedlings is very interesting and always fraught with pleasure, and it is astonishing how many beautiful kinds one obtains each season. To save seed it requires a dry atmosphere and the flowers must be pollenized either artificially or with the aid of insects or other causes. It is well to cut off the petals close up to the stigma, for two reasons, first, there is not so much surplus to hold the moisture and cause moulding, and secondly, the pollen is easier applied to the stigma. When the seed is ripe it should be carefully dried, then stored until sowing time, which should be from January to March. The seedlings grow rapidly and if cared for will flower very satisfactorily the same year. Seedlings require exactly the same treatment as plants from cuttings.

AS TO CULTIVATION.

There is no plant that responds to good treatment as quickly, as surely and liberally as does our Autumn Queen, and even with slights, rebuffs and cruelty she never fails to cheer us though she be not in her best dress.

I regret that I can not go largely into the details of cultivation this evening from the fact that there are nearly as many modes of cultivation as there are forms and types of flowers. I may say, however, that to get the best results the plants must never suffer from any cause from the time they commence to grow until they have flowered. The chrysanthemum delights in rich well drained soil. It is injured by too much and suffers equally from not having enough water. It thrives in sunshine and requires room for development. Those who are desirous of having very large flowers must remember that what they attain in size is at the expense of quantity, and I wish to impress upon those who are growing chrysanthemums in an ordinary way for garden decoration that it pays to thin the flower buds, taking from one to two thirds off each plant.

Some of the ways the chrysanthemum is grown:

First—As large plants in pots for exhibition either as bush plants or standard.

Second—So as to grow very large flowers for exhibition in a cut state.

Third—For producing very fine flowers in large quantities for sale or for home decoration.

Fourth—Growing medium plants in pots for market and conservatory decoration.

Fifth—For decorating private gardens and parks.

It may seem strange but there are very few varieties indeed that are suitable for all purposes above mentioned. Then again there are many varieties that do not thrive equally in all places.

GROWING SPECIMEN PLANTS.

The growing of specimen plants is one of the most interesting forms of cultivation, but it is one of labor and great attention and the man who attempts to do it successfully must be constantly with them, as one hour's neglect at any stage of the game will be charged up to him long before the first of November.

When to take the cuttings for specimens depends upon three things: the variety, the convenience and the size of plant required. It is best to put in cuttings at different times from November to March. One of the greatest troubles I have found

with very early struck cuttings is their liability to harden in February and March. This occurs when the plants are exposed to bright sunshine and to too much heat; and depend upon it as soon as a plant begins to harden (that is the wood to ripen) that finishes it as a fine specimen. Of course plants must not become pot bound at any stage, and they must be pinched so as to break rightly or they will be unshapely.

As to training I am sure that the fewer stakes there are used and the less mechanical the training is, the better for the plant, as it is more natural; for it must be remembered the chrysanthemum is somewhat of a rustic.

When the plants are growing vigorously they are benefited by watering with liquid manure, this should not be too strong, and if nitrate of soda or sulphate of ammonia is used it should be in very small quantities and not given too often.

The disbudding and training must be as strictly attended to as is the watering. When the plants are housed they should be subjected to as little artificial heat as is consistent with their requirements.

The growing of plants to produce exhibition cut flowers may be proceeded with in three ways. They may be grown in pots as for specimen plants, but without pinching, or they may be planted in boxes 10 inches deep and of any breadth or width according to the number of plants to be grown in each box. A box 3 feet long, a foot wide and 10 inches deep does nicely for six plants; or they may be planted out in a greenhouse and grown on without disturbing in any way. Such plants are allowed to carry not more than three or four flowers each; this is done by disbudding, pinching out the side shoots and surplus wood. Yet another plan which is followed quite generally in England is this: Plants are allowed to grow with one stem unmolested until June, when the stems are cut to within two feet or 16 inches of the pot, these are allowed to break and about three growths are allowed to develop, and on these growths only one flower. The plants are grown in from 8 to 14-inch pots, according to the strength of the plant and the variety.

Another form of cultivation, and one which has grown out of the extended cultivation of the chrysanthemum, is the manner in which thousands of plants are grown for cut flowers for market purposes. That is this: They are treated as roses are treated; they are planted on benches, from four to six inches deep and from nine to eighteen inches apart, according to the season of planting. If planted early in June they are planted eighteen inches apart, if in August nine inches, or even six inches suffices. They are not pinched more than once, and in many cases not at all. They are trained carefully to straight stakes and carry only one to three flowers to each plant, and when they are marketed they are cut with stems two to three feet long. This plan of cultivating is being very largely carried on in the neighborhood of New York.

The decoration of the garden with chrysanthemums is not as elaborate as we may expect it to be at a very early date. The requirements for the garden are rather exacting, as the plant should be of sturdy growth, it should have thick heavy bright foliage, it should have medium sized distinctly colored flowers with short petals, and of hardy constitution, thus defying wind and storm. I have been turning my attention to rais-

ing seedlings with the above schedule as my guide.

Of course when planting for garden decoration the plants must have room for development. They should be planted two and a half to three feet apart at the least. They must have nutritious soil, sufficient water is to be given them in dry weather, they should be in a position where they will be sheltered from heavy winds and under no circumstances forget to thin out a third of the buds. Quite a number of my friends have their "Snug Harbors" for chrysanthemums, which is nothing but a frame work of light strips and posts, covered with canvas. The roof is also of canvas attached to a roller. This is rolled up and down as required, and it is astonishing how much frost is kept out by this simple contrivance, and how many beautiful flowers are obtained.

Commercially considered the chrysanthemum is now of as much importance as any other flower in its season. Millions of plants are now sold annually where but a few thousands were sold ten years since. Good flowers of chrysanthemums realize as much as the very finest roses do in the depth of the winter. I saw the other day a basket of thirty-five flowers arranged by Thorley sell for \$100, and \$18 a dozen was frequently paid for fine flowers last season. These very plants these flowers were from can be purchased for 25 cents each.

And now I think it is time for me to be going, I must pay tribute to the Queen. It was said six years ago the chrysanthemum was a passing craze and that that was the last year of it, and so it was said each year (by some) until last year. This came from those who never knew how to love a flower, or from those whose mercenary interests warped their judgment. Lovers of flowers love the flower they have before them whether it be the aristocratic orchid or the plebeian golden rod. The Queen of Autumn lengthens out the year and adds sunshine to our hearts; she does it without trespassing or encroaching on any other realm, she is as happy with the artisan as with the richest in the land, she appeals to the heart and not to the purse, she is as welcome to all as are the crocus and dog-woods in the spring.

Seasonable Notes.

The exhibitions are here and now for the fruits of your labor. Be careful in packing both plants and flowers. Secure plants firmly in position either by blocks or other packing when removing them. Pass a soft piece of tying material entirely around each plant drawing rather tightly all branches, see that the flowers are sufficiently secured so as not to oscillate, as it is this which causes so many bruised and ragged flowers one sees on plants at exhibitions.

In packing cut flowers those who have not proper boxes for packing should first of all wrap the flowers in soft tissue paper, and that rather tightly so as to prevent the chafing of the petals; they should then be packed in layers of about two flowers deep, a very light covering of very thin boards or lath can be put on the top of the first two rows, then another lot of flowers, and so on until the top of the box is reached. Remember to pack sufficiently tight to prevent moving. Don't wet either the flowers or packing.

Cut all flowers at least 24 hours before packing, plunge the stems into water in a dry cold cellar away from ice, so that they may get well filled before exhibiting. Cut all flowers just before arriving at

VIEW IN A HOUSE DEVOTED TO ORCHIDS FOR CUT FLOWERS AT MR. WM. MATHEWS, UTICA, N. Y.

their best; they will keep two weeks and some will improve 20 per cent.

All dark flowers are improved by being shaded from the direct sunlight.

When cutting see that the variety tallies with the name, and if you are not well-posted have some reliable catalogue to refer to so as not to be disqualified for improperly naming or for duplication. All good chrysanthemum growers go round now with a pocket full of strong newly painted labels and relabel all plants requiring new ones and with a blue pencil O. K. all stock plants.

Raisers of seedlings will please bear in mind that there is lots of room at the top yet; but we do not want any semi-double kinds unless they are entirely novel in color or shape. We do not want any duplications of existing varieties. No old varieties with new names and no puny growers.

JOHN THORPE.

Standard Pots.

ED. AM. FLORIST:—It is a matter for sincere regret that a Boston firm should descend to question the decision of the judges in the award of the certificate of merit for the standard flower pots.

The members composing the awarding committee are beyond reproach, and the decision of that committee should be and

is considered final by all well meaning men.

The executive committee at its next meeting should adopt vigorous measures to exclude from future competitions or exhibitions any person or persons who publicly or otherwise question the decisions of any of the committees of awards. If some such action is not taken good men will decline to serve on these committees.

In the unfortunate advertisement of the defeated competitor it is made apparent that the opinions of Mr. M. A. Hunt were perfectly satisfactory. Did Mr. Hunt present a minority report? or did he withhold his signature from the report as presented to the society? It would seem that Messrs. Hews & Co. wanted to convey one or the other idea. And if so, would that firm have the report thrown out and no award made because the committee had not reported unanimously in favor of the standard pots exhibited by Messrs. Whilldin & Co.? If that was made the occasion for a "kick" at all competitive exhibitions very few awards could be made.

One of the wisest things ever attempted by the Society of American Florists was the establishment of a standard pot. If all the manufacturers would combine, and adopt a mould which would under

all reasonable circumstances make pots that would be interchangeable with each other, then the ideas of the society would be carried out. And, would it not be to the interest of the manufacturers to study the requirements of their customers, rather than antagonize them?

Oct. 8, '90.

EDWIN LONSDALE.

Palms as Gifts.

Says the *New York Times* in its issue of September 20: "A graceful and acceptable gift which a young mistress of a home especially values is that of a growing palm. In a handsome jar it reaches the dignity of a wedding gift. Select one which the florist can assure you has grown slowly in a cool place. Palms forced quickly in a hothouse will not stand the wear and tear of a dwelling house life, with its gas, dust, furnace heat, and so on. Hardy specimens, well cared for, put out through the summer, and given an occasional airing in the conservatory, your own or a florist's, in the course of the winter will thrive for years as a house plant. It is experimenting with forced specimens that has discouraged householders with them, and many persons now, for their conservatories and summer residences, rent palms by the season, the florist keeping a supply of

hardy plants continually with his customer. If any show signs of drying or lose their lustre, which is their great charm, they are at once removed and replaced with a perfect plant. There is little risk, however, in owning one outright if care is used in its selection and the florist tells the truth about it."

Special Fertilizers for Greenhouse Crops.

BY SAMUEL T. MAYNARD.

(From the October Bulletin of the Hatch Experiment Station of the Massachusetts Agricultural College.)

The question of the use of special fertilizers under glass is becoming one of great importance, and is attracting much attention among practical gardeners and scientific men.

Even the best and most skilled gardeners sometimes find that their soil, made up after the best formulas, fails to give the results expected. The plant food seems to be unavailable or the plant lacks the vigor to make use of it, and something more active is needed to give it a start.

To determine what special fertilizers will give the best results applied to crops under glass, a series of experiments were started in the winter of 1888-'89, the results of which are deemed of sufficient value for publication, although a longer series of tests may somewhat modify the results thus far obtained.

The following experiments were made in two houses built side by side as nearly as possible alike, one heated with steam and the other with hot water. The space was divided into plots of equal size in each house with the same number and kind of plants in each, the aggregate number of blossoms from both plots being given with the kind of fertilizer used.

CARNATIONS—1888 and 1889.

Six beds of thirty plants each were set in each house, the same kinds in each, and all as nearly the same size and vigor of growth as possible. The soil was made moderately rich with stable manure and fine ground bone, and the special fertilizer applied in liquid form by dissolving one tablespoonful in a two gallon can of water. The results are shown in the following:

Gave Blossoms.

Plot No. 1. Muriate of Potash,	276
" No. 2. Sulphate of Ammonia,	314
" No. 3. Nitrate of Soda,	309
" No. 4. Sulphate of Potash,	356
" No. 5. Bone Black (dissolved),	378
" No. 6. Ordinary liquid manure,	195

SUMMARY OF RESULTS.

These results are very much in favor of bone black and sulphate of potash.

PANSIES.

To compare the effects of muriate of potash with the sulphate, thirty-six plants of a choice strain of pansies were set in two beds and treated by mixing the fine fertilizer with soil so as not to bring it in contact with the leaves. The result is as follows:

Plot No. 1. Treated with Muriate of Potash gave 806 blossoms.

Plot No. 2. Treated with Sulphate of Potash gave 1363 blossoms.

CARNATIONS.—WITH COMBINED FERTILIZERS.

To learn the best combination for the carnation 13 plots were made, each of 10 of the same kind of plants. Using four pounds ground bone to each plot mixed with a well enriched soil as a basis, other fertilizers were applied as follows:

Plot.	No. of Blossoms.
No. 1. $\frac{1}{2}$ -lb. Muriate of Potash,	
$\frac{1}{2}$ -lb. Sul. Ammonia,	130
No. 2. $\frac{1}{2}$ -lb. Muriate of Potash,	
$\frac{1}{2}$ -lb. N. Soda,	124

No. 3. $\frac{1}{2}$ -lb. Muriate of Potash,	
$\frac{1}{2}$ -lb. N. Soda,	124
No. 4. $\frac{1}{2}$ -lb. Muriate of Potash,	
$\frac{1}{2}$ -lb. Bone Black (dissolved),	154
No. 5. $\frac{1}{2}$ -lb. Muriate of Potash,	
$\frac{1}{2}$ -lb. Dried Blood,	134
No. 6. $\frac{1}{2}$ -lb. Muriate of Potash,	
$\frac{1}{2}$ -lb. M. Potash (excess),	118
No. 7. $\frac{1}{2}$ -lb. Sulphate of Potash,	132
No. 8. $\frac{1}{2}$ -lb. Sulphate of Potash,	
$\frac{1}{2}$ -lb. Sul. Ammonia,	163
No. 9. $\frac{1}{2}$ -lb. Sulphate of Potash,	
$\frac{1}{2}$ -lb. Nitrate Potash,	110
No. 10. $\frac{1}{2}$ -lb. Sulphate of Potash,	
$\frac{1}{2}$ -lb. N. Soda,	133
No. 11. $\frac{1}{2}$ -lb. Sulphate of Potash,	
$\frac{1}{2}$ -lb. Bone Black (dissolved),	161
No. 12. $\frac{1}{2}$ -lb. Sulphate of Potash,	
$\frac{1}{2}$ -lb. Dried Blood,	113
No. 13. $\frac{1}{2}$ -lb. Sulphate of Potash,	
$\frac{1}{2}$ -lb. Sul. Potash (excess),	128

In this test, the sulphate of potash with the sulphate of ammonia gave the best results, closely followed by the same form of potash combined with bone black; with the latter, and muriate of potash third; while the poorest results were from sulphate and nitrate of potash, sulphate of potash and dried blood and muriate of potash in excess.

GENERAL SUMMARY.

Summing up the results we find that of the nitrates the nitrate of potash has given the best results, but that the sulphate of ammonia gives better results than either, especially in the production of a foliage crop.

Of the potash salts the sulphates give better results than the muriate.

Bone black shows a marked effect in increasing the number of blossoms.

Notes and Questions About Some Hardy Flowers.

"*MANETTA CORDATA* or *cordifolia*, which is right and where can I get it?"—*Cordifolia* is right. Siebrecht and Wadley catalogue it.

"*WHERE* can I get *Arctia echinoides*?" I do not find it advertised in any of the last year's catalogues that I have got. It is rather an uncertain plant to handle.

"I BOUGHT seeds of the annual *Arctia comuta*, last spring, but could not get them to germinate. They did not appear ripe to me." We also bought seeds of it, and were fortunate in raising some plants which grew very well, and bloomed beautifully.

OPOPONAX and *ACACIA FARNESIANA*.—"Henderson's Handbook of Plants gives *opopanax* as an umbelliferous plant, but in a contemporary I find this name applied to *Acacia Farnesiana*, which is right?"—*Opopanax* is a genus of umbelliferous plants. But evidently the word *opopanax* is used as a popular or English name for *Acacia Farnesiana*, a favored shrub-tree indigenous to the West Indies and a good deal planted near the coast of the more southern states and other extra-tropical countries, particularly in those bordering the Mediterranean, where a delicate perfume is manufactured from its flowers.

"Is *MILLA FLORULA* hardy here?"—The Long Island bulb growers treat it as a tender plant; they plant it out in spring and lift and house it again in fall, much in the same way as they treat gladioli. I am not sure that its hardiness has been sufficiently tested. Four years ago, however, I left some bulbs of it out over winter, and inspiring they were dead.

"COULD one trust to *calochortis* surviving the winter in open ground, if covered somewhat?"—Yes, I have found

several of them to be hardy enough here under such conditions; but like several other Pacific-slope bulbs they often are peculiar in their behavior, and I always have had best success with them when I lifted and took them indoors over winter or kept them in pots in a cold frame.

"WHAT EFFECTUAL means can one take of destroying root lice? My garden is so infested with this aphid that I am unable of late years to grow asters and some other composites (especially *Belvis perennis*) at all satisfactorily, and I am perplexed how to mitigate the nuisance. The 'yellow ant' rears them as we do cattle, and establishes colonies of them on the roots of every aster, and they suck the life out of them. What can be done to rid our plants of this pest?"—Will some one kindly tell us.

"LATE SOWN asters and calendulas and pansies and phloxes, with escholtzias, petunias and nasturtiums give quite a brilliant late display, and are useful for cuttings but I would like some perennials. I cannot use the yellow-flowered composite perennials. So far I regard the white form of *Anemone Japonica* as by far the most valuable perennial of its season. I have the semi-double pink or carmine-rose *Anemone*. It is very gay and useful, but rather coarse to use with white in cutting flowers. I wish a single, rose colored one could be got of equal quality."

"I would much like to have the names of six hardy perennials coming into bloom with *Anemone Japonica*."—Try *Clematis Stans*, *Pyræthrum uliginosum*, *Gaillardia andillorum*, *Eranthis pinnatifida*, *Conoclinium coelestinum* and hybrid delphiniums cut back as soon as they had bloomed in early summer. All these are good September bloomers, but we also have a host of odds and ends, although few full crops at this season. *Gladiolus*, *tritomas*, *dahlias*, *camas* and the like, together with annuals furnish a large bulk of our cut flowers in September.

"MOUNTAIN FLEECE gets so touched by frost before fairly opening that it has little value with me."—The heyday of this plant is between the 1st and 20th of October and in localities where a sharp frost occurs before this time the Mountain Fleece cannot be grown to advantage unless protected from frost in some way, for frost will destroy its flowers.

"COSMOS was just as useless though started early."—Again October is the heyday of the cosmos, indeed, it is later than the Mountain Fleece, and it doesn't make a lot of difference in their time of flowering whether the plants were started early or late, unless they have been pot grown.

"WHEN SHOULD one get plants of *Corydalis nobilis*, in early spring or in the fall?" In the fall by all means. It is perfectly hardy and starts into growth quite early in spring.

"WHY is this thus?"—"In sending for the double white *Hesperis matronalis*, I got the common single-flowered purple one; for *Trollius Fortunei*, double, I got the ordinary single *T. Europeanus*; for *Achillea the Pearl*, I got the ordinary *A. ptarmica* fl. pl., and in *Scabiosa caucasica* I had a quite single flower of a washed out tint, evidently a poor quality seedling."—Because some *trollius* have large, full, incurred flowers, it is hardly safe to call them double. *Scabiosa caucasica* has always been, in my opinion (but I know many people differ with me on this point), an immensely over-praised plant.

W. F.

DEUTZIA SCABRA can hardly be said to be on the market it is so scarce; and in the northern states it is barely hardy. *Deutzia crenata* is probably the species meant. Yes, it can be forced easily enough, but it must be brought along slow. The single form drops its flowers so quick, it is hardly worth forcing, and the double form has an objectionable purple tinge. The variety called *Drake of Rochester* or *candidissima* fl. pl. is the only one worth forcing, for it comes pure white, and being double the flowers hold on pretty well. But plants for forcing should be well rooted, well ripened, long rested and brought on slow, and not too early in the season. W. F.

Conducted by CHARLES F. BAKER, Agricultural College P. O., Ingham Co., Mich.
Send specimens of unidentified insects and diseased plants to him at above address.

Blister Beetles.

Often times in late summer or autumn, when the florist has begun to flatter himself that for another season he is done with the bother of fighting his insect foes, he finds that there still remains, in the form of blister beetles, a most troublesome pest.

The family is characterized by certain conformations of the legs and thorax. The head is bent downwards and forwards, and the antennae are eleven jointed and spring from the front of the head just before the eyes. The legs are long and slender and the hind tarsi are four jointed. The wing covers are very variable and lack in the limy substance, that which gives so much rigidity to the covering of many of our beetles. The bodies are slender, cylindrical and soft. The metamorphoses of the blister beetles and also of the oil beetles are very complicated, and sometimes called hypermetamorphoses. The oil beetles are somewhat similar to the blister beetles in habits, being parasitic in their earlier stages. However, while the oil beetles affect wild and honey bees, the blister beetles pass their earlier stages exclusively in certain locust eggs. Of the blister beetles the black (*Epicauta pennsylvanica*) appears to be the most generally known, and the gray blister beetle is also somewhat widely distributed.

Epicauta pennsylvanica (Fig. 1) is a pure black beetle from 5-16 to 7-16 of an inch in length, and common in the fall about golden rod and aster. It also occurs on many other plants of which it eats the leaves and the pollen of the flowers. The eggs (Fig. 2 B) are deposited in the ground, in a small cavity hollowed out for the purpose, near where locust eggs have also been deposited. After the eggs are laid the female covers them up with dirt scratching it over them by means of its legs. The eggs are laid during July and up to the middle of October in masses of about one hundred and thirty eggs each. Several of these masses are deposited at different intervals, making a total of from 400 to 500 eggs. If the temperature is favorable the eggs hatch in about ten days, producing what Dufour, in 1828, called a *triungulinus*,

but what is now known as a *triungulin*. At first these (Fig. 3) are very small and perfectly white in color but soon become a light brown. Soon after hatching they are very active, running about in search of food, which consists of locust eggs (Fig. 2 A). In regard to their habits during this stage Dr. Riley says: "At night or during cold or wet weather all from one mass huddle together and become very slow of motion. When the sun is warm they are very active, running about over the ground with their long legs and prying with their large heads and strong jaws into

(Fig. 3)

every crevice and crevice in the soil into which, in due time, they burrow. They bristle with spinous hairs which aid them in burrowing. They can survive for even a fortnight in a moderate temperature without food. In the search for locust eggs many never reach the goal but die on the way. Upon the slightest disturbance they will curl up in a ball, with the head bent close to the breast. As soon as the *triungulin* finds locust eggs it goes to eating (Fig. 2 A). Should two or more enter the same egg pod a deadly conflict sooner or later ensues, until one alone remains the victorious possessor." The *triungulin* eats about two of the locust eggs, and then, at the end of about eight days, prepares to shed its skin. It emerges from this moult as what Dr. Riley calls the "canabidoid stage of the second larva" (Fig. 4) from its resemblance to the larva of the family canabidae. After this process is over it returns to its diet of eggs for about a week, when it again moults. This form is Dr. Riley's "scarabaeoid stage of the second larva," so named from its resemblance to certain larva of the family Scarabaeidae. During this stage the larva reminds us, except in size, of the clumsy white grub. It passes about a week in this stage, when it moults, appearing as the "ultimate stage of the second larva" (Fig. 5). It remains in this form about a week, after which the insect leaves the egg mass and forms a small round cavity in the ground, in which, after four days, it moults, assuming its pseudo-pupa form (Fig. 6). This has also been called a conicrete larva from its resemblance to the conicrete pupae of maggot. At this moult all of the skin is not shed, some fragments remaining fastened to the body. At first the new skin is quite soft but soon becomes hard. The head is mask-like and destitute of movable appendages, while the feet are replaced by six tubercles. The insect reaches this stage of its development in the fall of the year, and consequently hibernates as a pseudo-pupa. In the spring, on the approach of warm weather,

the pseudo-pupa revives bursts its skin and appears as the third larva. It now finds a suitable place and, without taking any food in the meantime, burrows into the ground, where it forms the true pupa (Fig. 7). The fact of its taking no food between

(Fig. 7)

the pseudo-pupa and true pupa stages renders the reasons for its assuming the pseudo-pupa stage quite obscure. In about five or six days the pupa stage is passed, and the imago emerges. Only two species of blister beetles are ever known to be at all beneficial in the stricter sense of the word, and these sometimes prey on the larvae of the common Colorado potato beetle. The Spanish fly in Russia feeds on ash, lilac and a number of forest trees. In Italy whole potato fields are devastated by a certain species (*Lytta erythrophthalma*). In our own country these beetles were once considered the worst enemies of the potato. In the south the best known form is the striped blister beetle, which sometimes attacks potato and tomato vines in large numbers. Somewhat further north we find the ash-gray blister beetle attacking potatoes, honey locusts, apple trees, hickory, beets, various kinds of beans and other plants. In some sections the margined blister beetle is quite common, and has been known to attack tomatoes, potatoes, egg plant, Kentucky coffee tree, spinach and other garden plants.

By far the most common and widely known is the black blister beetle, which is common in the fall on golden rod, eupatorium and other wild plants. But only too often does the florist have to suffer from its inroads on common outdoor garden plants, such as asters, gladioli, dahlias and carnations.

In regard to remedies we find that this insect resembles somewhat the rose bug (*Macrodactylus subspinosus*). The remedies commonly in use are more or less unsatisfactory and no sure remedy has yet been discovered. A remedy which has sometimes been recommended, is laying winnows of straw among the rows of plants, driving the insects into them and then burning. On agitating the plants the beetles will drop to the ground, run to the straw and there take shelter. This plan, however, is very often impracticable, both on account of the situation and the proximity and delicacy of the plants. Another and much better method is jarring. A good sized pan, the bottom of which is covered by water or coal oil, is held underneath the plant. The plant is inclined over it and slightly jarred, when the beetles will fall at once, as they are very sensitive to any disturbance. After becoming used to the operation a large number of plants can be treated in a comparatively short time. It would be better to expend a small amount of work on the plants than to lose them entirely, as is sometimes the case. After the beetles are gathered they may be destroyed by crushing or any other method. This treatment should be repeated every few days, as the beetles will continue to come as long as there are any in the immediate vicinity.

[The figures are all re-engraved from originals by Riley.]

Colours Golden Verschaffelti

I would like to enquire through the FLORIST what success florists have had with the colours Golden Verschaffelti as a bedder. JASON B. ROACH.

Watertown, N. Y.

(Fig. 2)

(Fig. 1.)

(Fig. 6)

News Notes.

MASON, MICH.—A town of 3,000 inhabitants is without a florist.

LUBINGTON, MICH.—Wm. Gregory has just completed two new houses 11x100.

FORT DODGE, IOWA.—John U. Kellenberger has built two new houses 12x60 each.

CLEVELAND.—A. Schmitt, the Glenville florist, has opened a floral store at 141 Euclid avenue.

LITCHFIELD, MINN.—A. M. Caswell has succeeded W. J. Whittington as proprietor of the Litchfield Greenhouse.

SCRANTON, PA.—G. R. Clark & Co. are giving their annual chrysanthemum show at the Armory. It will close Saturday.

WILMINGTON, DEL.—James N. Lewis & Bro. have added two large greenhouses to their plant. They will be devoted to cut flowers.

SAN FRANCISCO.—The fall flower show of the California State Floral Society will be held in the New Academy of Science Building on the 5th, 6th and 7th insts.

LOS ANGELES, CAL.—The second annual chrysanthemum fair opened October 29 and will continue to November 7. The sum of \$245 was awarded in premiums.

MILWAUKEE.—H. Stapes has built greenhouses and started a general florist business at Elm Grove, Wis. Mr. Stapes was with Mr. P. Schmeling for some time.

NEW BEDFORD, MASS.—The third annual chrysanthemum show of the New Bedford Gardeners' and the Florists' Club is being held this week the 6th to 8th insts.

NEWARK, N. J.—The chrysanthemum show is being held this week at the Belleville avenue rink. Bird, of the Arlington nurseries, has a magnificent exhibit.

ORANGE, N. J.—Jacques Bros. have sold their entire business interests to Mr. Frederick Mau, the orchid importer. Mr. Mau took possession of the premises October 20.

PROVIDENCE, R. I.—The forthcoming chrysanthemum show of the Rhode Island Horticultural Society will be held November 14 and 15 instead of 5 and 6 as previously announced.

ST. LOUIS, MO.—During the Corn Palace carnival J. C. Remison, the florist, made a beautiful display of plants and flowers in the palace which was unstintingly praised by the local press.

PLATTSBURGH, N.Y.—W. J. Hesser has put in a large boiler to heat by steam. He is also building an additional greenhouse 16x60 and will add 3,500 feet of glass to be used on hot beds.

SPOKANE FALLS, WASH.—Mr. Isaac F. Tillinghast and E. P. Brotzman of La Plume, Pa., were recently at Chelan, this state, looking for a location for the establishment of a nursery and seed farm.

HELENA, MONTANA.—The firm of Miller & Winter has been dissolved by mutual consent. Mr. Miller retires and Mr. Winter will continue the business at the old place—corner of Sixth avenue and Warren street.

PORTSMOUTH, N. H.—Mr. Robert Paterson succeeds his brother, the late William Paterson as gardener in charge of the estate of Hon. Frank Jones. He has filled

the position of foreman under his brother for a number of years.

KALAMAZOO, MICH.—The local press described the floral displays made by Van Bochove Bros. and the Mountain Home Conservatory at the County fair which closed October 3, as the finest made in this section for many years.

NEWPORT R. I.—The Newport Horticultural Society will give a chrysanthemum show at Masonic Hall November 11 to 13 inclusive. Those having the matter in charge are confident that it will be the finest display ever made in New England.

HARTFORD, CONN.—It is announced that the September exhibition of the Hartford County Horticultural Society netted a loss of about \$200. Preparations are being rapidly perfected for the chrysanthemum show which will be held Nov. 12 to 14.

HAMILTON, ONT.—At a meeting held the evening of October 27 the Gardeners' and Florists' Club of Hamilton, Ont., was organized with an initial membership of 23. F. G. Foster is president and H. Browne secretary. There is every prospect of a strong club in the near future.

SAN DIEGO, CAL.—The decorations for the chrysanthemum fair were entirely Japanese, including bamboo screens, draperies and the costumes of the ladies in charge. These proved very effective in combination with the display of blooming chrysanthemum plants with which the building was filled.

UTICA, N. Y.—The Florists' Club of Utica had a large attendance at the meeting held October 6 to forward the arrangements for the forthcoming flower show. The exhibition will be held in Oneida Hall, November 19, 20 and 21. Committees have been appointed to attend to the details of arrangement.

OTTAWA, ONT.—At the last meeting of the Florists' and Gardeners' Club the question of changing the place of meeting was decided by the vote of the presiding officer, the vote of the members standing 13 to 13. Some little feeling was displayed by those on the losing side and three withdrew from the club as a result.

CLYDE, O.—E. Hall & Son have added two new houses 10x85 and one 20x85, making them a total of 7,500 feet of glass. All the houses are fitted with ventilating apparatus. They have three 10-foot houses with the ventilating machinery placed on the outside of the roof in order to leave head room clear. They report that it works like a charm.

MILWAUKEE.—At a meeting of the Wisconsin Florists' and Gardeners' Club held Oct. 7 the following officers were elected: President, G. W. Ringrose; Vice President, Bert Hoppenrath; Secretary, W. H. Ellis; Treasurer, H. Haessler; Assistant Secretary, H. P. Ellis; Trustees: Ben Gregory, F. P. Dilger; J. M. Dunlop, Financial Committee, M. P. Dilger, C. B. Whitnall, Jas. Currie.

LONDON, ONT.—At the last meeting of the Forest City Florists' and Gardeners' Society it was decided to postpone the chrysanthemum show one week, making the dates November 11 to 13 inclusive instead of 4 to 6 as previously announced. The postponement was made on the report from a number of intending exhibitors that their "mums" would not be in bloom at the dates first set.

MILWAUKEE.—A new retail flower store was opened at 219 Grand Av. Nov. 1. The name of the concern is "The Floral Gem." A. Klokner is the manager, and the flowers and plants will be furnished by F. P. Dilger. At a meeting of the Wisconsin Florists' and Gardeners' Club, appropriate resolutions were passed on the death of Mrs. C. Hoppenrath, mother of the Vice-President of the club, and wife of one of the oldest florists in the city.

ATLANTA, GA.—The chrysanthemum show at the exposition was quite a success. Eight of the first premiums went to Mr. J. Burpitt, a local exhibitor who made a very fine display. The Evergreen Lodge Flower Garden of Clarksville, Tenn. made an excellent display, taking first premium in each of the two classes in which entry had been made. Mr. W. B. Woodruff of Macon, also made a good display.

BRATTLEBORO, VT.—At the recent fair first premiums in the floral department were awarded to D. McGillivray for best display of plants, best collection of geraniums, and begonias; to C. E. Allen for best display choice cut flowers, best collection pansies, best collection cut roses, best collection gladioli, best collection verbenas, best collection asters, best collection dahlias, best basket cut flowers, best foliage bed and best immortelle design.

LOUISVILLE, KY.—At last the florists of this city have come together and will hold a chrysanthemum show November 11 to 15 inclusive. There is promise of a fine display. It is hoped that there will be visitors from among the florists of other cities. Joseph Cohen has just finished three new houses 80x20, all to be heated by steam. Mr. Chas. Schlechter has bought a place and erected three new houses 100x14, to be heated by hot water. Rooms for winter bloom are looking well. Business is very brisk at present, roses in great demand.

NEWARK, N. J.—There are in the library proper and the reference room of the public library of this city about fifty books all of which bear directly upon the subject of botany. Many of these are elaborately illustrated, some with colored plates, and they include the standard authorities on cultivated plants. The books include in the neighborhood of 10,000 pages of reading matter and fully 400 colored plates besides innumerable wood cuts. Anyone in this vicinity who desires to study in this attractive field can have the use of this valuable collection of books for the asking.

TORONTO, ONT.—At the regular monthly meeting of the Toronto Gardeners' and Florists' Club held October 8, about forty members were present. It was decided that the club should hold its first annual chrysanthemum show, November 11 and 12. A special meeting was held October 15 to advance the arrangements for the exhibition, and from the enthusiastic manner in which the members are taking hold of the matter success is assured. The annual election of officers of the club will be held at the meeting November 12.

PATERSON, N. J., Oct. 20.—On the morning of September 25 appeared the only white frost so far this season, and then it was not severe enough to injure even the coleus. Up to this date cannas, caladiums and other tender plants are

Copyright by Thos. Weathered & Sons.

CONSERVATORIES OF THE ALLEGHENY PARKS, ALLEGHENY CITY, PA.

[DESIGNED AND BUILT BY THOS. WEATHERED & SONS.]

looking fresh, and dahlias are flowering abundantly, but the coleus in consequence of the temperature having fallen to 40° and even a little lower on three or four nights, present a dingy appearance and may be looked upon as done for the season. Last year our first frost did not come until October 4, but was severe enough to cut off everything at once; last year we started the first fire to warm pipes in rose houses on September 10, and fires were continued without intermission throughout the fall and winter, this season the first fire was started September 11, but on account of much warmer weather discontinued with the exception of two or three nights until October 5. Yesterday we were treated to a regular old fashioned summer thunder storm with outside thermometer at almost 60° at 10 p. m. Carnations are flowering freely in the cold frames, without having had the sashes over them to this date.

Boston.

The cut flower trade is improving steadily. Chrysanthemums are cheap considering the quality of the greater part of the stock coming in. Much of it is specimen blooms and in quality the supply is far ahead of any previous year.

Contrary to precedent, the effect of the influx of chrysanthemums is not visible on the rose market. About all the good roses which come in are easily disposed of at fair prices. Carnations still continue scarce. Violets are in short supply with indications of an early advance in price. There are large quantities of cosmos still in the market.

The very timely subject assigned for the November meeting of the Gardeners' and Florists' Club is "Chrysanthemums."

The schedule of premiums for the year 1891 issued by the Mass. Hort. Society appropriates \$3,800 for plant and flower prizes, a liberal advance over the amount offered last year.

Dr. and Mrs. Daughtry, of Portsmouth,

Va., who after attending the convention have been spending a few weeks "down east" passed through Boston October 31 on their return home, and are probably the last of the convention delegates to go. Come again.

Thos. Flannagan, an old time rose grower, died recently at his home in Dorchester of consumption.

Miss Cecelia A. Smith, for many years bookkeeper at Norton Bros.' flower store, was married October 30. She was a great favorite with both customers and gardeners, and Norton Bros. will miss her.

Jackson Dawson has been quite seriously ill, having caught cold during one of his "collecting" expeditions in the woods.

W. J. S.

St. Louis.

Among the visitors to the Exposition at the time of the floral exhibition were Jno. E. Bohan of the Garfield Park Rose Co., Chicago and Jos. Hehl of Jacksonville, Ill.

There is just now considerable music in the vicinity of the greenhouses of Messrs. J. W. North and T. W. Gay. The employees at these two places have formed a military band and are practicing under the direction of W. C. Cook, foreman at the first named establishment.

The first annual banquet to florists, nurserymen and gardeners under the provisions of the will of the late Henry Shaw was given at the Mercantile Club the evening of October 13. Prof. Wm. Trelease, Director of the Missouri Botanical Gardens presided, a little over fifty being present. The company took seats at the banquet board promptly at 8:30 o'clock and it was 11 o'clock before the elaborate menu had been disposed of and Prof. Trelease rapped for order and introduced Mr. L. A. Goodman, Secretary of the Missouri State Horticultural Society, who spoke briefly and pointedly upon the "Needs of Horticulture."

Hon. J. M. Smith, for many years Presi-

dent of the Wisconsin State Horticultural Society, read a brief thesis on "What Ought a Market Gardener to Know?" It abounded in practical and helpful suggestions. Short addresses were also delivered by Mr. J. M. Jordan and Prof. Nipher upon "The Commercial Florist" and "Science and Education," respectively. The last address of the evening was made by Mr. M. G. Kern, who took for his subject "Landscape Gardening." The banqueters dispersed promptly at the stroke of twelve.

Baltimore.

Don't imagine for a moment that because she is not making much noise Baltimore is dead—far from it. She is hustling along, and will keep up with the procession or break a trace, as a little jaunt around among our fellow craftsmen, or a walk around our stores would soon convince you. The scribe had hoped to invite you to take the said jaunt with him next year. But alas, the S. A. F. is not coming, for a good reason, and he can only increase his reputation as a kicker at the established order of things and abuse the delegates from the Monumental city, for not inviting the great society to partake of Maryland hospitality and see the prettiest—well, we will not brag until you get here; but, when you do, you will find that though not so large as some towns, we have the proud satisfaction of being first in some more important particulars than mere size.

To return to the delegates. There have been some tales told out of school, of sundry and several pleasantries which would make you smile, and it is only necessary to ask Wagner how he liked the bathing, or Campbell about his state-room on the Puritan to get a broad grin from any delegate near by. All unite in extravagant praise of Boston and its people, and the first expression on returning from one and all was "You missed it this time, old fellow."

Well something must be missed, but so an equally good thing is not missed we will not cry; and there will be one more fair Baltimorean to welcome you when the S. A. F. finally gets here. This in confidence.

The number of new houses that are going up or are just finished is bewildering. Scarcely a man in the business but has added to his glass to some extent. Mr. Jas. Pentland is erecting a show house with office attached, a very desirable improvement; Mr. Massey, a new man, is putting up a dwelling and greenhouses near Govanstown; Galloway & Cristie, a small house; Dr. Craig, W. M. Stirling, I. H. Moss, Wm. Fraser, The Lanesville Floral Co., Brackenridge & Co., and many others have already added largely to their glass or are doing so; all of which does not look like falling behind, does it?

Then we have the proud satisfaction of feeling that we evolved from our own inner consciousness, that most successful, and necessary thing, an exchange for the sale of cut flowers. From a talk with some of the gentlemen at the head of it, it was learned: that it has survived its first summer and is still in good working order; that it is more necessary and useful to the growers and dealers interested in it, than ever; that the business carried on is so systematized as to make it far more economical, safe and satisfactory to all parties than any commission house could possibly be; and, that such is the quantity of business expected, and flowers to handle they have elected a committee consisting of Messrs. Feast, Seidewitz and McRoberts (two growers and one dealer) to meet weekly, establish prices and send out quotations. Look out for us! We are coming along.

Several months ago there came to the ears of your scribe vague rumors of a great seed, plant and bulb importing house that had been established in Baltimore. No one knew exactly where, or by whom; the advertisement had been seen in papers from Germany, and it was said, gave a glowing account of the greatest importing house in America and located it somewhere on Gay St. Full of generous impetuosity to see this rival of the New Yorkers, in all his glory, the scribe made careful inquiry among the fellow craftsmen in vain; no one knew, or seemed to care anything about him.

At last an advertisement in your valued paper was shown him with the suggestion that it might be the man, and he in fancy beheld his labors crowned with success at last. Being, as is perfectly natural with scribes, of a retiring and modest disposition, he thought to touch hands as it were, with hidden greatness by humbly requesting in writing the pleasure of the address of the great unknown, that he might call upon him and purchase if it could be so arranged some plants. After waiting weary days a coldly courteous reply was received with three small samples, stating that his place was too far away to be visited, but orders accompanied by cash would be filled.

It should be stated that the city directory furnished no clue, as such a name had never appeared in it. The postoffice authorities could not or would not give the desired address, but another institution proved less scrupulous, and through it at last he received the long desired address, 412 N. Gay street.

Number 412 N. Gay street did not impress him as greatly as he had expected. It was a two-story house with a store front to the lower story, the windows

filled, not with beautiful chromos and picked bulbs, but marble and slate mantels. Inside on the floor lay a slate mantle, into the grooves of which a young man was industriously running gold paint. All the store was surrounded and walked in with mantels of all the wonderful colors that emanate from the fertile brain of the slate mantle man, but not a plant, not one bulb, not a single chromo.

"Where is Mr. C. M. H—?" he asked another young man at the desk. He looked up and said slowly, "I don't know." "Does he not live here?" "No." "Where is he then, where can he be found?" "You had better ask the landlord, three doors below."

The landlord, proprietor of a thrifty looking shoe store, was nothing loath to shatter the last remaining fragment of the poor scribe's great importer and capitalist. "Yes, there was such a man in No. 412, he left about January 15, between two days, he owes me rent yet," then with a look of mingled pity and fellow feeling "you are not the first one that asks after him, he owes everybody I believe."

In one of Dickens' best works he gives a graphic description of a rainy night and an equally graphic one of the despondent heart of the hero, by merely describing the continuance of the rain. Similarly it is enough to say of the scribe's spirits that it rained all the rest of the day and the following night.

New York is ahead still, and importing for Baltimore just as usual, and the scribe would rather talk about something else, so good bye.

MACK.

Foreign Notes.

THE NATIONAL Chrysanthemum Society of England has appointed a committee to erect a memorial to the late William Holmes.

Among the plants certificated by the Royal Hort. Society of England October 14 were *Richardia* *ethiopica*, Little Gem, a dwarf variety of the well known "spotted calla," *Bouvardia* *Purity*, *Bowers* large and pure white; *Chrysanthemum* *Annie Clibran*, *Pink Midge*, *Lacroix*.

THE chrysanthemum shows have already opened in England.

GARDENERS' Mutual Improvement Societies are being organized all over England.

AN English gardener speaks of carpet bedding as "tattooing" the lawn.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XVII.

CONSIDERATION—VALID OR OTHERWISE.

Thanks, I'll not object to a boutonniere. Don't make it too large, I'm not on my way to a picnic. Want to ask me a question do you? Well, I'll sit down by these pots of heliotrope for the odors of the law are not always of the most savory sort.

Well, permit me to say that you have done a very foolish thing. Of course, I understand that you did it to oblige "your friend Wigglested." But you were aware that Wigglested was a member of a "committee on decoration," and as such he had no right to draw profit from the order for the flowers.

It was your duty to make out the bill in accordance with fact, that is, set the market value of the goods on the face of the invoice. Then if "your friend Wigglested" wanted to add twenty or twenty-

five dollars to the bill that would be his funeral. Now, by billing these goods to the committee at almost double their market value you have lent yourself to a fraud.

Yes, the law always has the right to inquire into a consideration, no matter how many receipts, releases, statements, etc. have been passed. It is quite true as you say that the expressed consideration is rarely the correct one, but that doesn't excuse you in such a transaction as this.

It is not a fraud to sell a house and lot for \$5,000 and put \$10,000 in the deed at the request of the grantee, for no one looks to old deeds to get at the value of real property. And yet on general principles I say: "Don't do such things."

The grantee might make use of the deed to get a loan from some simple minded person for more than the property would bear. Some people make a living by dealing in mortgages, bills of sale, etc., in which fictitious considerations are set forth. Keep clear of all such transactions. Bear in mind that one such slip as this Wigglested matter may injure your good business name forever.

You say you wouldn't have done it if the flowers had been intended for some individual. Wrong again, my advice to you is to be even more particular with committees than with individuals. Yes, a committee has no soul, but it has something quite as important—a sacred trust to perform. The money is entrusted to it for a specific purpose, and the donors don't expect that any of their money is to find its way into member's pockets.

Hunt up "your friend Wigglested" and force him to refund the money at once, and let it be a lesson to you. Call no man friend who asks you to commit the pettiest fraud for his personal benefit.

Now in this matter of consideration the law will not undertake to say whether a consideration is adequate or not, that's some question of fraud is raised. Take for instance the case of the transfer of a house and lot for "natural love and affection and the sum of one dollar." The courts would uphold such a transfer if, at the time of making, the grantor was perfectly solvent.

You must understand that the moment a man's assets are weighed down by his liabilities that moment he becomes a trustee for his creditors. True equity requires him to treat all alike and make no preferences and turn over all his property for their benefit. If after knowing yourself to be insolvent you sell any piece of property the law will require that the consideration shall be a good and valid one. And no matter how you may see fit to "slaughter" your own goods, as guardian, agent, trustee or representative of any character, you will not be permitted to accept an inadequate consideration.

But some considerations are good in the eye of the law although they are apparently very slight. For instance, a mere promise to do or not to do a certain thing is a good and valid consideration to uphold a contract.

The law will not interfere to protect stupid people from the hands of sharp dealers in the absence of fraud. For example, you have a perfect right to allege that a stock of dahlia bulbs has been frost-bitten and to offer a mere song for the lot. Even if it turns out that they were all good the consideration paid must stand, for the law allows a man to resort to all sorts of means—this side of fraud, to decry the thing offered for sale and secure it at as low a price as possible.

But on the other hand, the seller has no

such right to deceive. He must stick to the truth, that is if he opens his mouth at all. If he says "the seed I'm selling you will produce a double variety" he will be held to his representation, for in this case the buyer is absolutely at his mercy.

Now, while the law allows a sane man to part with his property for an inadequate consideration, it will not allow a minor or a lunatic or a habitual drunkard to do so. Nor will it allow a man not living with his wife to secure her release of dower unless the consideration be adequate.

The rule pretty generally is, that one promise is a good enough consideration to support another promise. This is so in all breach of promise cases; but in these there need not be an actual promise, the law will infer one if the circumstances point that way, just as in some states it will infer marriage when a man lives with a woman and permits the world to think that he is lawfully married to her.

You ask me about seals. I may say in a word that in some states in contracts executed under seal there is a presumption of a good and valid consideration. But presumptions don't always stand. They may be overturned, and seal or no seal, the law will look into the matter not collaterally perhaps, but in an action brought for the purpose of setting aside the contract.

Considerations often fail. In such cases the contract is void. For instance, you make a contract with me that if I will defend you in a certain action you will set an arbor vite hedge around my place and guarantee it against one winter's frost. It would not be difficult to determine whether the consideration on your part failed or not, but on mine it would be very difficult. For if you lost you would at once be inclined to charge neglect and want of skill on my part as an excuse, and that would open up a very ugly fight.

What the law does in such cases? Well, the general rule is to look and see whether there has been a substantial compliance, a fair and reasonable performance. The law will not undertake to split hairs or debate questions which may be decided two different ways with apparent justice.

But there is another aspect to this question of consideration to which I desire to call your attention briefly. A consideration must always be a lawful one and one not against good morals. For instance, you have no right to "compound a felony" in order to secure personal profit.

If a young man in your employment steals a hundred dollars, your promise to his father not to prosecute provided he returns the money, is null and void and punishable by law, and the father may, whether the case be dropped or not, recover the money back again if he sees fit to bring an action.

You ask me whether if a consideration was found to be partly illegal the fraud would taint the whole transaction? I'll give you a case in point. Suppose you owe me \$500 and suppose I detect you committing some crime and therefore I propose to you in consideration of my promise not to give any information or testify against you. Where you execute a mortgage for \$1,000 on your house and lot I need scarcely tell you that such a mortgage could not be enforced. Part of this transaction is perfectly good, but equity would not step in and soil its hands by helping me get my legal and lawful dues. On the other hand, the mere fact that a bill of goods contains one or more items of contraband would

not enable the purchaser to repudiate the whole bill.

There is still another rule—equity will not enforce a consideration which is hard or cruel. You recollect the case in the Merchant of Venice, in which the Jew asked for a pound of flesh? The court said: "Take it, but if you shed a drop of blood we betide you."

UNCLE BLACKSTONE.

Catalogues Received.

Reasoner Bros., Manatee, Fla., plants and nursery stock; Glen & Drake, Columbus, Ind., nursery stock; F. S. Peer, Mount Morris, N. Y., plants and small fruits; J. Elletton, Auburn, N. Y., grapes; A. "THE GOLDEN FLOWER"

There can be no more certain indication of the increasing interest in the chrysanthemum among the general public than the fact that the well known Boston firm of L. Prang & Co. has considered it a good business venture to publish a most elaborate book devoted to descriptions of various varieties illustrated with colored plates executed in the highest style of art and apparently regardless of expense.

A copy of this beautiful book, just issued, has been sent to us by the publishers.

The varieties illustrated by colored plates are: Kioto, Medusa, Jardin des Plantes, Tokio, Laciniatum, Lirion B. Bird, Cullingfordii, Moonlight, M. E. Nichols (October Beauty), Peter the Great, John Thorpe, Mrs. C. H. Wheeler, Ceres, Mrs. C. H. Hardy, King of the Crimson, Golden Dragon and Christmas Eve.

Each plate is accompanied by an appropriate verse written by some well known poet, many of them original and all enclosed by symbolic borders engraved for the work. Heavy plate paper is used throughout. The book is a splendid example of the perfection to which the art of printing has been brought, and is a beautiful tribute to the popularity of the "Queen of Autumn."

A VERY PRETTY custom is that inaugurated by one of the public schools of Houston, Texas. October 4 was set apart as "Flower Day" on which occasion twelve pupils read short essays on various flowers and floral subjects. Though the pupils ranged from only 11 to 16 years of age the essays, as reported in the *Houston Post* of Oct. 5 were excellent, each one presenting a great deal of information in a condensed form and in a very attractive way. The subjects of the twelve essays were: "My favorite flower," "Cape Jessamine," "The flowers at home," "Geraniums," "Magnolias," "Roses," "Lilies," "The Oleander," "Wild flowers," "The most beautiful flower," "My visit to the flower garden," "Uses of flowers." This opens up a very inviting field to the children and cannot fail to stimulate their interest in and love for flowers. Would it not be wise for the readers of the *FLORIST* to suggest the adoption of a similar "Flower Day" in their cities, where opportunity offers.

IN REPLY to A. S. P. Ampelopsis Veitchii clings to the wall in ivy fashion and never by long tendrils grape vine fashion; and 3 or 5 parted leaves often occur upon vigorous plants of it. Ampelopsis Roylei is another sort of the same kind, but of ranker growth. Whether your plant is this or not we can not tell without seeing a specimen of it. Ampelopsis quinquefolia

is the true Virginia creeper, it abounds everywhere in the woods crawling along the ground or climbing up into the branches of trees. It climbs by means of rootlets as well as by tendrils, but oftenest by tendrils; there is a particular variety of it, however, that attaches itself to walls and tree trunks by rootlets more than by tendrils, but this variety is uncommon in cultivation.

MR. AVERY GALLUP, of Denver, Col., passed through Chicago November 3, returning from a four months trip to Europe. He says the City Park of Dublin was the finest he saw. Metal wreaths with China flowers are much used in London. Small white stuffed birds are extravagantly used on fine floral pieces both in Paris and London. Finds much to admire in tuberosus begonias. The Bamboo was a fine decorative plant as used in Italy.

A NEAT pamphlet on "Orchids for beginners" is being distributed by Messrs. Pitcher & Manda short Hills, N. J. It gives cultural notes on the best low priced orchids suitable for the production of bloom. This firm is now holding an exhibition of chrysanthemums and orchids at their establishment at Short Hills, and will give a similar exhibition at the Madison Square Garden New York City, November 24 to 30.

ARE THE young florists of America who are seeking a higher education making use of the books treating upon subjects bearing upon the profession which are to be found in the public libraries with which every American city of any consequence is now blessed? In the public library of every large city there is a mine of stored up knowledge which may be had without money and without price by those who seek it.

THE HOLLYHOCK DISEASE.—For the benefit of those who are specially interested a reprint of the article on the hollyhock disease has been issued for special distribution, and may be obtained by applying to the Secretary of Agriculture, Washington, D. C., or to the Chief of the Division of Vegetable Pathology.

WE HAVE received from the Herenden Mfg. Co., Geneva, N. Y., a copy of a photograph of the S. A. F. taken at Mr. Hunnewell's, Wellesley, Mass., last August, which they have been sending complimentary to all those who were in the group. It is a very effective ad. for the Furman boiler, made by this firm.

BILBERGIA "SPLENDENS."—Mr. Harold Otter, Doylestown, Pa., calls attention to this as a neglected plant deserving of more attention. The plant referred to is a showy thing but like many plants of the Bromeliaceae is of doubtful value to the average florist.

WE HAVE received from Mr. H. G. Higley, Cedar Rapids, Iowa, a tuberous begonia bloom measuring 4½ inches across. Quite a bloom for the original package state to produce. We should add that the bloom is scarlet in color.

MRS. J. S. R. THOMSON, the florist of Spartanburg, S. C., has been appointed an alternate to represent the state of South Carolina as one of the lady managers of the World's Columbian Exposition of 1893.

A PARAGRAPH that is going the rounds of the daily press states that a florist of Sing Sing, N. Y., is a direct descendant of Pontius Pilate.

Society of American Florists.

The annual report for 1890 will be ready in a few days and will be mailed at once to all members whose dues for the current year are paid. The list of members shows a gratifying increase, and there is much valuable information contained in the report. The progressive florist can not afford to be without it. Members whose dues are still unpaid are requested to forward the amount to the secretary and the report will be mailed in return. Parties observing errors or omissions in the list of members are requested to send prompt notification of the same, and it is especially desired that the secretary should be informed at once in case of the death of any member so that it may be properly recorded.

A number of members who attended the Boston meeting have sent letters to this office enquiring for the address of the photographer who took the group picture at Mrs. Hayes'. The gentleman's address is J. W. Porter, 64 Warren street, Roxbury District, Boston, Mass. Mr. Porter desires me to announce to those members who paid him for pictures that they shall receive them very soon, the delay having been caused by a press of business and a preponderance of dark weather.

Mr. Chas. Storer is at work on an enlarged copy of the group picture made at Mr. Hunnewell's. Should it prove satisfactory copies will be for sale in a few days. WM. J. STEWART, Secretary.

Coming Exhibitions.

November 10-14, Philadelphia.—Chrysanthemum show, Penna. Hort. Society.

November 11-12, Toronto, Ont.—Chrysanthemum show, Toronto Gardeners' and Florists' Club.

November 11-13, Boston.—Chrysanthemum show, Mass. Hort. Society.

November 11-13, Montreal, Canada.—Fall show Montreal Gardeners' and Florists' Club.

November 11-13, London, Ont.—Chrysanthemum show, Forest City Florists' and Gardeners' Society.

November 11-13, Newport, R. I.—Chrysanthemum show, Newport Hort. Society.

November 11-14, Detroit, Mich.—Chrysanthemum show, Detroit Florists.

November 11-14, Baltimore.—Fall exhibition Gardeners' Club.

November 11-15, Cincinnati.—Chrysanthemum show, Cincinnati Florist Club.

November 11-15, Indianapolis.—Chrysanthemum show, Society of Indiana Florists.

November 11-15, Louisville, Ky.—Chrysanthemum show, Louisville Florists.

November 12-13, Worcester, Mass.—Chrysanthemum show, Worcester County Hort. Society.

November 12-14, Hartford, Conn.—Chrysanthemum show, Hartford County Hort. Society.

November 12-14, Minneapolis, Minn.—Chrysanthemum show, Society of Minnesota Florists.

November 13-15, Springfield, Mass.—Chrysanthemum show, Hampden Horticultural Society.

November 13-15, Buffalo, N. Y.—Chrysanthemum show, Buffalo Florist Club.

November 14-15, Providence, R. I.—Chrysanthemum show, Rhode Island Hort. Society.

November 19-21, Utica, N. Y.—Floral exhibition, Florists' Club of Utica.

WE HAVE received from Robert Manning, secretary, part one of the transactions of the Massachusetts Horticultural Society for 1890.

Wholesale and Retail Prices.

Is it not the tendency among florists who do a retail and wholesale business to sell to the general public at wholesale prices?

I have before me a circular of a rose house offering 16 regular size roses by mail for \$1, price charged the trade by these same growers is \$7 up to and over \$18 per 100, freight paid by buyer. They kindly offer to mail roses to the trade if 30 cents per 100 or \$3 per 1000 is added; to retail customers as seen above they pay postage, a direct discrimination against the trade. An advertisement appeared recently in your columns of roses, and the same firm offered in the *Country Gentleman* roses at same price to the general public.

Numerous other instances might be cited, but for the present these will suffice. The remedy is on the part of the trade to boycott all florists who do business as above.

A. A. MILLER.

Oakdale Station, Pa.

[We do not believe that there is such a "tendency." There may be isolated cases such as noted, but it is difficult to believe that there is any considerable number of those in the trade who would be so unwise.—Ed.]

SEED TRADE ASSOCIATION.

ALBERT M. MCCULLOUGH, Cincinnati, president; JOHN FORTLER, Jr., Boston, secretary and treasurer. Their annual meeting at Cincinnati, June, 1891.

Some Facts and Figures About Advertising. SECOND PAPER.

Below we give a tabulated statement of the amount of money spent by us in advertising seeds the past spring in a few of the leading papers and magazines, with the number of answers received from each and the apparent cost of each application.

We say apparent cost for in the experience of careful records kept for some years past we find that on an average in making application for catalogues one in five mention the name of the paper in which the advertisement was seen.

only one in five mentioned any paper, and yet we can hardly credit all the applications for catalogues to newspaper advertising, for the good will of an established mail business of its own force bring in a number of applications for catalogues independent of any newspaper advertising. We would consider it fair to attribute to newspaper advertising 80 per cent of the applications received each spring, thereby dividing the apparent cost of 89½¢ per application by 4 we have a net cost of about 22¢ for each application received from newspaper advertising. We would here state that this average net cost from the above papers is also the average net cost per application from all papers in which we have advertised the past season.

Now this cost per name may seem extremely high, and it is indeed a high cost, but from conversation with other advertisers we believe it is no higher than the

inated covers, with beautiful colored plates of rare new flowers and choice vegetables, painted from nature by a prominent New York artist," and we would have received a flood of postal cards, mostly from women and children applying merely for the pictures. But of course such applications are not desirable and it is our aim to so word advertisements as to interest and draw replies only from those who really have occasion to use seeds. Therefore in our display advertising in every case we ended with such words as "Order now and ask for," implying that to get the catalogue it was necessary to send an order or at least to show an intention of ordering eventually.

The third column of the above list is headed "number of direct sales," this means the number of orders received direct from advertising a cheap 25 cent collection of flower seeds.

It will be noticed that the *Argosy*, New York *Ledger* and *Metropolitan* of New York, all papers of very large circulation, brought in very meager returns, emphasizing what we said in our last article that it does not pay seedsmen to advertise in literary weeklies which circulate mostly in cities and large towns. Neither do we consider trade journals good mediums for seed advertising; notice the high cost per application in the *Foultry World*, which is a valuable medium for advertising thoroughbred poultry, yet its readers look only for poultry news and do not seem to be attracted by advertisements of other goods.

Summary. Our candid opinion as to the results of newspaper advertising during 1889 and 1890 is that it has not been productive of direct profits; by this we mean not only does display advertising fail to show sufficient direct returns but also that catalogue advertising, counting cost of the applications, plus the cost of the catalogues and the correspondence which they entail, fail to bring an appreciable profit.

We consider, however, all newspaper advertising to be largely dependent upon the influence which cannot be traced but which it undoubtedly exercises over the mind of the general public, particularly of that portion of the public who have already received the seedsmen's catalogue whose name is thus kept before them.

We would be very much pleased to have other advertisers give their experience with figures and relative cost as we have done above and we feel quite sure that the net cost of each application attributable to advertising will prove to be in the neighborhood of 20 cents each, provided the advertiser has not begged the readers to send for his very handsome catalogue, colored plates, etc., whether they expect to buy or not.

MUST BE SOLD for want of room—about 40,000 CHRYSANTHEMUMS

Of about size and fine shape, all colors and colors mostly in later sorts, all left out of the selection \$3 per 100, 24 \$15, F.O.B. Also, 10,000 GIBSON'S SELECT Hybrid PANSIES for winter blooming, now ready. By express, 60c per 100. By mail, 60c per 100.

J. C. GIBSON, Woodbury, N. J.

CHRYSANTHEMUMS.

Stock plants now in flower and ready to deliver. We carry 600 varieties. A list of stock plants and prices will be sent you early in November. This is the time of year to buy Chrysanthemums for propagating—while in flower.

Average price of stock plants, 10 cents.

We offer for the first time, the EARLIEST Yellow Flowering Chrysanthemum, "GOLDEN ALPHA,"

blooms as early as October Beauty. A good yellow four inches in diameter. Have been cutting flowers from these plants since October 1. Price \$2.00 per stock plant. For Spring delivery in March, \$10 per 100.

We call attention to the variety called "STONEWALL JACKSON" (Crystal Wave) as being absolutely one of the very best late flowering sorts for cut flower work.

Stonewall Jackson (Crystal Wave, Mrs. Potter).—Very pure satiny white; petals quite long; beautifully undulating; about 1 1/2-inch wide, same width from base to tip; shows center a little for a time, but petals soon cover it. Lasts remarkably after being cut. Stout plants, 50c.

V. H. HALLOCK & SON,
QUEENS, N. Y.

HYDRANGEA GRANDIFLORA.

We ask the attention of Dealers and the Trade to our Large Stock of HYDRANGEA GRANDIFLORA, nice, well-grown plants at very low prices, viz:

New York.

Business quiet as yet.

Society always hesitates how to open the season.

American Beauties are as they have always been since their introduction, queen of the rose market; it is the best selling and most satisfactory rose and the present demand far exceeds the supply.

It is to be very much regretted that the New York Horticultural Society have decided not to hold their annual chrysanthemum show this year.

There is an unusually large amount of chrysanthemums in the market this year, as many of the large growers intended them for exhibition.

Violets are coming in very fine.

Scallan exercised his usual good taste and genius in his elaborate decorations for the wedding of Miss Lily Wilson to Count Levenhaupt, nephew of the Swedish Minister of War.

Thorley intends holding a weekly exhibition of chrysanthemums at his beautiful store on Broadway.

Fred Henning, formerly with Klunder, has opened a flower store at 39th street and Broadway.

Among the visitors during the week were J. C. Vaughan of Chicago; Robt. Craig, Philadelphia; John N. Champion, New Haven. JOHN YOUNG.

Chicago.

The election of officers at the meeting of the Horticultural Society of Chicago held October 28 resulted as follows: George Schneider, President; W. H. Chadwick, 1st Vice-President; F. C. Vierling, 2nd Vice-President; Edward G. Uihlein, 3rd Vice-President; James D. Raynolds, Secretary; G. L. Grant, Assistant Secretary; Gen. A. L. Chetlain, Treasurer. An executive committee was also provided for. It will consist of the officers of the society and the following: C. R. Williams, J. A. Pettigrew, J. T. Anthony, Jonathan Periam, J. C. Vaughan and Dr. Wm. E. Clarke. The society starts with a membership of over forty, the majority being well-to-do amateurs, among whom there is great enthusiasm. The first regular meeting of the society will be held in January. The admission fee has been fixed at \$5, this amount to include dues for the first year, the annual dues after the first year to be \$3.

The Chicago Floral Co. has built a new palm house 25x125 and 18 feet high at their place on the Grand Boulevard. The meeting of the Florist Club held last Thursday was a hummer. There was a large turnout, this being the last meeting before the exhibition. The membership of the club is still growing. The "adjoined sessions" seem to be quite a feature. Considerable talent has been developed at these sessions and some great scores have been made.

FLORISTS CAN SAVE MONEY

By carefully examining our list of Seasonable stuff offered here. We wish to call attention to a few reasons why we can save you money. We handle a full line of every item you ordinarily need. We buy it in quantity for cash and will sell at a moderate profit. Submit to us a list of all your wants in our stock for the year or for six months, and if you live west of the Allegheny Mountains we promise you that we can lay the entire supply at your door, freight paid, cheaper than you can do elsewhere, even if you purchase each item from first hands. Combine your orders, get wire, foil, moss in season and by freight. Many florists double their expenses in express charges and telegrams by neglect. Try the plan of keeping a standing order with us for moss, stakes or like standard stock and let small items go with such stock, always making 100-pound lots or over, and thus losing no weight and saving express charges. We can and will save you money on your entire supply of items here named or others.

J. C. VAUGHAN, CHICAGO.

Mail address, P. O. Box 688.

TELEGRAPH IN OUR STORE, 146-48 W. WASHINGTON STREET.

Rooted Cuttings.

My circular and price list is now ready, and can be had on application; it is interesting reading to any florist who buys Carnations, Coleus, Alternantheras, Geraniums, Cannas, etc.

Pansies.

One day's mail brought me orders for 18,200, and one week's mail for 37,500 plants. Is it any wonder I am sold out? This year's sales prove conclusively that there is no better strain in the market. And next season I shall grow not less than half a million plants.

L. B. 338.

ORIGINAL AND LARGEST GROWERS OF

LILIAM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 130 in length, o a crop of *Liliam Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it sits in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that *Liliam Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last faster.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have earned so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as HEADQUARTERS FOR THE BERMUDA EASTER LILY; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

—* HALF A MILLION BULBS. *

Be sure you get the genuine *Liliam Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably thereby rendering it absolutely valueless for forcing and we have known instances where these mixed bulbs have been sold to large growers at the genuine variety, where here loss has resulted, and buyers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Indianapolis.

At the State Fair recently held in this city the new Floral Hall was opened but found to be too small, the fruit department taking up two-thirds of the hall. The hall and all the arrangements were very unsatisfactory to the florists; the least possible amount of money was spent, consequently everything had a cheap appearance except the outside view of the hall, which was acceptable.

First premiums were about equally divided among three firms, Anthony Wiegand, Bertermann Bros. and Mrs. Chas. Riemann. Frank Saack also carried off several premiums. A very creditable display was made by several lady amateurs, the best ever made. About \$800 was offered in the floral department through the efforts of our society.

At the last meeting of our local club, October 2, (which by the way is in a flourishing condition) a resolution was adopted recommending Mr. J. D. Raynolds for Commissioner of Horticulture at the World's Fair, and a committee was appointed to work with that view in hand. Mr. J. J. B. Hatfield read a very interesting paper on Ancient Horticulture; it was very instructive and carefully written.

The chrysanthemum show committee also had a meeting. All arrangements for the coming event are well in hand, a great success is assured, a carefully worked out slip of information regarding seedling premiums is printed and can be had on application to the secretary. The warm weather has pushed chrysanthemums forward and some fear was expressed that they would come too early, but a cool spell is on now and we hope it will continue.

At a recent opening of a dry goods store by an English syndicate about 10,000 rosebuds were given away.

Bertermann Bros. have made needed additions to their store room on Massachusetts Ave., and their greenhouses on East National Road.

Our new florist, John Hartje, who built a new place not long ago, is bringing some fine violets into the market.

On account of favorable weather outdoor stuff is taking a new start and plenty of outdoor flowers is the result.

The Society of Indiana Florists, also the Indianapolis Florists' Club, extend a cordial invitation to all to attend our coming exhibition. W. B.

BOXES. BOXES. MAILING and CUT FLOWER BOXES.

Read what C. A. Reeser says for our 3-PIECE BOX.

GENTLEMEN:—I write to tell how well pleased I have been with the mailing boxes you have furnished me during the past two years. I think I have ordered 5 or 40 thousand, thus giving them an extensive trial. I think there is nothing in the market that is so satisfactory, at least that has been my experience, and I have tested nearly if not quite all the boxes in the market for that purpose.

Yours very truly, C. A. REESER.

SMITH & SMITH, Kenton, Ohio.

GLADIOLUS BULBS.

Prevailing Colors, Pink and White.

Over 100 named varieties, and a number of choice seedlings, all mixed together. This collection has never been culled, and it has received a number of first premiums. In fact it has never failed to do so when exhibited. To avoid retailing these bulbs, I offer them this fall at \$10.00 per 100 for first size; second size, \$7.50. A quantity of small bulbs and tubers at bargain.

M. CRAWFORD, Cuyahoga Falls, Ohio.

Pat. 1882, '85, '86, '88, '90.
ARMORED

FOR WATER, AIR, STEAM, ACIDS, OILS, LIQUORS, GAS, SUCTION.
And for any and every purpose for which a hose can be applied.

Sizes, 1/2 inch to 42 inches diameter.
The making, vending, or use of any Serviceable Armored Wire Bound Hose not of our manufacture is an infringement on one or more of our Patents. The rights secured to us render each individual dealer or user responsible for such unlawful use with all the consequences thereof. A Co-operative Scheme.

A real estate firm in Philadelphia has formulated a novel co-operative scheme for florists and is now presenting the plan to the florists of that city. We give below an extract from the circular which has been sent out.

"It is the purpose of the undersigned to form an association of florists for the purpose of reducing the cost of operating and producing. The idea is to take a tract of land contiguous to Philadelphia and build upon it a central steam and water plant at a cost of about \$50,000, intersect the property with macadamized roads leading to railroad station, divide the tract into plots of from five to seven acres. These plots are to be sold to reputable florists at from \$1,500 to \$2,000 per acre, depending upon location, the price carrying with it a proportionate interest in the steam and water plant.

"The most carefully collected information assures an immense saving to each individual purchaser."

We had arranged to have for this issue an illustration giving a general view of the Chicago exhibition, but through the carelessness of an engraver's assistant the drawing was lost when too late to replace.

Chrysanthemum Shows.

Chicago.

The third chrysanthemum show of the Chicago Florist Club, held last week was a very marked improvement over any of the club's previous efforts in this line. There was a large display and the great improvement in the quality of the plants and cut blooms of chrysanthemums over the exhibit of 1889 was the subject of much favorable comment on the part of all who were present last year. The attendance was also considerably in excess of last year, showing that the popular interest in flowers is growing and that the exhibitions are having the desired effect upon the general public. The daily press gave unstinted praise, and very full reports appeared daily in all the leading papers.

The large floor space was laid out in garden style, no benches being used except at the sides and end for cut flowers and floral arrangements. Palms and laurels were interspersed among the groups of chrysanthemums, creating a very pleasing effect.

In chrysanthemum plants Mr. O. P. Bassett of Hinsdale had by far the largest display. There were six large and five small groups of his plants and among them some very fine specimens. He ran heavy to L. Canning in white and the great value of this variety was again strikingly demonstrated. He had made several entries in nearly all the classes and his plants were all so excellent that in many cases he captured second as well as first prize, and for "best fifty plants in not larger than 10-inch pots" he received all four prizes, the four amounting to \$120. Mr. Bassett also took first, \$20, and second, \$12, for best six white; first, \$20, for best six yellow; first, \$20, for best six pink; first, \$20, for best six red and first prize of \$6 each for specimen white, specimen yellow, specimen pink, specimen bronze and specimen red.

Messrs. John Goode & Co. had a fine lot containing the main display of standards. They received first, \$15, for best two standards, white, first \$15 and second \$10, for best two standards yellow, first, \$15, for best two standards, pink, and third for specimen yellow, pink and bronze. The plants stood in the form of a wide ribbon bed across one corner of the hall and were very effective. Mr. McAdams, who is the Co. of this firm, is to be congratulated on the improvement in his plants over those of last year.

Mrs. S. P. Gardner of Hinsdale, who swept the plant premiums up last year was unfortunate this year in having her plants backward in blooming, though she sent in plants for one large group which were a pretty feature of the show. She received second, \$12 for six pink, same for six red, second, \$4 for specimen yellow.

same for specimen pink, same for specimen bronze and specimen red.

Mr. Frank Leslie of Lake Geneva, Wis., had a large group of excellent plants which made a fine display, but Mr. Bassett had swept the field in the class in which he had entered.

The only entry for best 50 plants grown to single stem and single flower in not over 6-inch pots was made by Mr. M. A. Hunt, Terre Haute, Ind., and he was awarded the first prize of \$50. The plants were in 4-inch pots, ranging from 2 to 3 feet in height and each one bearing an immense blossom. The blossoms of Excellent and P. B. Mead were especially fine. The group was a very taking feature of the show, crowds being continually gathered around it.

N. Singler received third, \$8 for six white, second, \$12 for six yellow.

A. H. Saxen took third, \$8 for six yellow, same for six red, second, \$10 for two standards white, and third, \$6 for two standards yellow.

The special price of \$10 offered for best specimen white grown from seed by exhibitor went to Henry Stuttle of Batavia, and Mr. John Lane's special sweepstakes prize, a carved chrysanthemum cane, for largest number of names of American origin went to John Goode & Co.

There was a very large display of chrysanthemum cut blooms, in which appeared some excellent flowers. There were several entries by florists from a distance, among which were collections from N. Smith & Son, Adrian, Mich., M. A. Hunt, Terre Haute, Ind. and Frank B. Smith, Danville, Ill. The awards were as follows.

Best general display of cut chrysanthemum blooms, both quality and quantity to be considered in making the award, 1st \$25, E. Weinbocher & Co.; 2nd \$15, Jno. Forster; 3rd \$10, Jno. Goode & Co. Best collection cut sprays in vases, of one of a kind, 1st \$15, E. Weinbocher & Co. Best twelve naturally grown sprays, 1st, \$5, E. Weinbocher & Co.; 2nd, \$3, Jno. Goode & Co.; 3rd, \$2, Frank Smith. Best 100 blooms, two of a kind, 1st, \$20, N. Smith & Son; 2nd, \$10, H. Stuttle; 3rd, \$5, Frank Smith. Best twelve blooms, one of a kind, 1st, \$5, M. A. Hunt; 2nd, \$4, N. Smith & Son; 3rd, \$3, H. Stuttle.

The special premium of \$25, offered by Mr. W. H. Rand for six orchids, six varieties in bloom went to Charles Reissig.

In cut roses Mr. M. A. Hunt walked away with many of the first prizes, and his blooms were very fine. He took first honors for twelve Mermetts, Brides, Gontiers, Perles and Niphetos. O. P. Bassett took first for American Beauty and La France and second for Wootton, Perle and Niphetos. E. Weinbocher & Co. were awarded first for Bon Silene and second for American Beauty, Mermet and Gontier, and Geo. Klehm second for La France. W. A. Kennedy was given first for any new

variety for a dozen fine blooms of Meteor, and second on Brides.

E. Weinhoeber & Co. were to the front in carnation cut blooms taking first honors for twenty-fives of Grace Wilder, Silver Spray, Garfield, Hinz's White and maroon color. J. C. Vaughan got first for Tidal Wave and N. Singler took the second prizes on Silver Spray and Tidal Wave.

Among the chrysanthemum blooms shown by M. A. Hunt were three which occupied a vase by themselves and which attracted much attention. They were a 9-inch bloom of Mrs. Frank Thompson and very large flowers of the Bride and Edwin Molyneux.

Pitcher & Manda, Short Hills, N. J., made a small display of specimen chrysanthemum blooms cut with very long stems, and Messrs. H. E. Chitty, Paterson, N. J., and John McGowan, Orange, N. J., each made displays of carnation cut flowers; both of the latter including blooms of Lizzie McGowan, the new white.

Among the roses shown by E. Weinhoeber & Co. were fine blooms of Madame Cusin and Ma Capucine. J. C. Vaughan displayed a vase of finely colored blooms of Meteor, and Brown & Canfield, of Springfield, Ill., showed some specimen Duchesses of Albany and La France. O. P. Bassett also displayed a vase of fine Duchesses of Albany in his collection. J. C. Vaughan exhibited blooms of a carnation bearing the descriptive name "American Flag." The red and white stripes were there and all the flower lacked was the stars in the field of blue.

J. T. Anthony was an easy winner of the \$50 prize for best collection of orchid cut flowers, having a very fine display, including a very considerable variety for the season. E. Weinhoeber took the \$3 prize for best 100 vases.

The plan of having some new feature in the floral arrangements each day was found to be an excellent one in maintaining interest in the exhibition, and there were a large number who visited the exhibition each day on this account. On the first day prizes of \$20 and \$10 were offered for best arranged baskets of any style, and prizes of \$40, \$25, and \$15 for best arranged basket of orchids. There were five entries in the first named class, George Klehm receiving first for a large handle basket of magnificent La France roses and adiantum ferns. Every rose was a specimen and the arrangement was very graceful. E. Weinhoeber & Co. were second with a very elegantly arranged handle basket of Beauties, Mermet's, Valley and Farleyense ferns, a sash of pink ribbon being attached to the handle. In the entries for orchid basket, J. T. Anthony was unfortunately debarred from competition through coming in late, owing to a delay in receiving part of his flowers. It was a very rich arrangement and contained a very large assortment of fine flowers, including cattleyas, oncidiums, odontoglossums, vandas and cypripediums. First premium went to George Klehm for a round flat basket of mainly oncidiums gracefully arranged with adiantum ferns. Second went to E. Weinhoeber & Co. for an elegant handle basket filled with oncidiums, cypripediums, odontoglossums and zygopetalums in adiantums, the handle wound with lavender ribbon and a sash of same draped from one side. Frank Bentley took third with an opera basket of cattleyas, cypripediums, laelias, lycastes and oncidiums very daintily and effectively arranged with fronds of Adiantum Farleyense.

There were five entries for best mantel

decoration on the second day, the entries being by Messrs. J. T. Anthony, E. Weinhoeber & Co., Charles Reissig, F. F. Bentley and Joseph Curran.

The first prize of \$75 was awarded to E. Weinhoeber & Co. Their mantel was very gracefully decorated with adiantum ferns, with a splendid specimen of A. Farleyense on the small shelf at the top. At the right several handsome sprays of oncidiums and other orchids stood out from among the ferns while blooming vines of Langerias rosea and alba were effectively draped on both sides. The base was filled with decorative plants, a mass of long-stemmed white dahlias being placed at the left. The arrangement was by Mr. Wm. J. Smyth, in whom Messrs. Weinhoeber & Co. have a very able decorator.

The second prize of \$50 went to Charles Reissig, whose right hand man is Mr. P. J. Hauswirth. This arrangement was also mainly of adiantum ferns, a very handsome specimen of A. Farleyense being very effectively placed at each side. In the center appeared a mass of orchids loosely arranged, while the base was filled with palms and similar decorative plants.

J. T. Anthony received the third prize of \$25, and that his mantel was worthy of a prize of five times that amount there was no question. Every plant used was a specimen and certainly no better collection of decorative stuff was ever used in a mantel decoration in this city.

At the top were adiantum and nephrolepis ferns and rex begonias, and in the mass of adiantums on the main shelf were a few broad-leaved dracaenas effectively placed. At the base was a splendid lot of decorative plants, a small specimen of *Caryota urens* being used at each side with magnificent effect.

The mantel entered by F. F. Bentley was of ferns, chrysanthemums and decorative plants, and that entered by Joseph Curran was ferns, with a huge bunch of pink carnations at each side and palms at the base.

On the third day the contest was for three prizes aggregating \$100 for table decoration, table set for twelve persons. There were five entries.

Charles Reissig took the first prize of \$50. The table was a large round one with a six pointed star for a center piece. The center of the star was a low mound of Adiantum Farleyense, the points being alternately of pink and white flowers, arranged with adiantums; the flowers in three of the points were La France roses, two were of Bride roses, and one of lily of the valley. The plates for the ladies were at the points of the star and the favors at each were of flowers to match the point. The table was set by one of Chicago's leading clubs and the silver and glassware was very rich.

The second prize of \$30 went to Joseph Curran. His table was a three cornered one, with a center piece of Farleyense ferns in the form of a three-leaved clover, from which rose a number of cypripediums. A bunch of the fronds of Adiantum princeps was placed at each corner while large fronds of the same adiantum were pinned to the folds of the table cloth as it fell from the sides. It was a unique arrangement which was much admired.

George Klehm received the third prize of \$20 for a round table with a twelve pointed star for a center piece. The points were alternately of La France roses and lily of the valley, and the favors were of flowers to correspond with the point opposite the table.

Walter Kreitling's decoration was upon

a large round table in the center of which stood a handsome silver bronze table lamp with a pink silk shade. The globe of the lamp stood well up from the table so that there was no obstruction of the view across the board. Around the base of the lamp was a low mound of Mermet roses and adiantum ferns about two and one-half feet in diameter, while loose flowers of the same rose were scattered on the cloth so as to make a border about a foot wide around the mound, giving the whole central arrangement a diameter of about four and one-half feet. The favors were Mermet roses with a frond of adiantum.

Frank Bentley had a long table of conventional form with a center piece of Grace Wilder carnations and adiantum ferns, and near each end a smaller arrangement of Roman hyacinths and adiantums with a small plant of *Cocos Weddelliana* in the center. The favors were of Grace Wilder carnations combined with adiantums.

The special prize of \$20 for best basket of roses, the same day, brought out but two entries, the florists having had about all they could attend to with the elaborate dinner table decorations. However, the two baskets entered were both excellent. The one shown by George Klehm and which received the prize, was a large side basket, containing a great number of fine specimen blooms of Duchesses of Albany, among adiantum ferns, with two clusters of Perle roses effectively placed at each side. The other entry was a large handle basket from E. Weinhoeber & Co. and contained Mermet and Bride roses among adiantum ferns. The handle was wound with pink ribbon and a broad sash of same depended from the side.

Another feature of this day was a premium of \$50 offered for the best general collection of cut flowers. This was designed to bring into the exhibition on the third day a fresh lot of bloom to brighten up the display as the flowers entered on the first day began to lose their freshness. E. Weinhoeber & Co. took the plum with a very excellent collection of roses, carnations and chrysanthemums occupying fully fifty lineal feet of table space.

On the fourth and last day George Klehm won the prize of \$35 for best center piece suitable for buffet table. His entry was a large one-sided basket of Perle roses relieved by adiantums, surmounted by a loose cluster of sprays of yellow chrysanthemums combined with *Asparagus tenuissimus*. Long sprays of asparagus also lead from the center piece to the four corners of the table where they were fastened by sashes of bronze yellow ribbon.

Two prizes were also offered on the last day for best design of chrysanthemums, suitable for dinner or luncheon table. The first prize of \$20 went to George Klehm, for a large four-leaved clover of *Gloriosum* chrysanthemums loosely arranged with adiantum ferns. The second prize of \$10 was taken by E. Weinhoeber & Co. with a round flat filled with *Gloriosum* chrysanthemums combined with *Asparagus tenuissimus*. In the piece entered by Joseph Curran two large loosely arranged bunches of chrysanthemums, one bronze and the other yellow, rose at opposite angles from a base of hardy ferns with a band of autumn leaves at the point where the stems of the two bunches met.

During the exhibition J. C. Vaughan added to his exhibit a vase of the new Waban rose, which may be described as a small Mermet of very deep color. He also displayed a vase of Pierre Guillot.

SKETCH OF FIRST PRIZE TABLE DECORATION AT THE CHICAGO EXHIBITION

Among the side attractions of the exhibition was a display along the wall in frames of the beautiful colored petals of chrysanthemums which appear in "The Golden Flower," the handsome new book published by L. Prang & Co. of Boston. Messrs. Prang took this way of bringing to the attention of Chicago flower lovers the new publication.

The weather was perfect during the first three days of the show, but Friday afternoon and evening it rained dismally and the attendance fell off accordingly. The largest attendance was on Thursday when there were 2,599 paid admissions. The daily press was remarkably liberal in giving complimentary notices and reports each day during the show and many of the reporters did very clever work, and the club expended \$400 in advertising in the amusement columns of the various papers.

The Chicago *Herald* has won the hearts of all the florists by its extreme liberality. It not only offered a special prize of \$100, but gave more space to the exhibition during the week than any other paper, and the Sunday before the show it gave four columns to a very cleverly written and well illustrated article prepared by Mr. Sam. Clover, a member of the *Herald* staff, who is a genuine flower-lover. Mr. I. W. Scott, the publisher of the *Herald* has a lively interest in matters floricultural. He is a son of the late D. Wilmot Scott, of Galena, Ill., who was for so many years secretary of the Nurserymen's, Florists' and Seedsmen's Association (now the American Nurserymen's Association).

Orange, N. J.

This show opened on the 4th inst. under very favorable circumstances and considering that it was election day, the attendance was very good. The exhibition on the whole is superior to any the society has held, the cut flowers are particularly good in all classes, also the standards and small plants in 6-inch pots. Among the winning lots of fifty, those exhibited by John Farrell, gardener to Mr. Wm. Barr of Orange, are some superb flowers, notably Mrs. Chas. Leboeuf, Mrs. Wm. Barr, Mrs. George Bullock, Mrs. Pratt, L. Caning, etc.

In the second premium lot exhibited by

Mr. Thos. H. Spaulding, Orange, N. J., Ivory, the new pearl white was particularly fine; also Wm. H. Lincoln and some very fine new seedlings.

Judge Benedict, of Staten Island, also showed a very fine lot in this class. In the classes for standards, John Farrell was first for 10 plants, also for 6 plants and 1, and second for 3, all of which were particularly fine and well grown. For three standards, Mr. Spaulding was first with extra fine plants. In single specimen plants John Holterman, gardener to J. Crosby Brown, Esq., of Orange, was first with a fine plant of Puritan, also for three plants. For three grafted standards John Farrell was again first; the same exhibitor also had some very fine ferns and took first premium in each class.

In plants exhibited not for competition, but which added very materially to the whole show, was a large and very attractive group of palms and other foliage plants exhibited by Robert McArthur, florist of Orange, and four *Latania borbonica* measuring 15 feet through and one *Pandanus utilis* fully 15 feet high, shown by J. Hayes, gardener to O. D. Munn, Esq., to which the committee recommended special commendation.

For the best 25 plants, chrysanthemums, arranged for effect, J. Holtzman was first with a fine display. The gold medal offered by Mr. Jas. R. Pitcher for the best seedling plant, John Thorpe won, with a magnificent dark crimson variety named G. W. Childs; this will make a sensation in the chrysanthemum world when introduced into commerce.

For basket of chrysanthemums, T. H. Spaulding won first, and K. Kleeg of Orange, second, with a novelty in the floral line; it consisted of a basket of good flowers and ferns frozen in a large block of ice, measuring 10 inches thick by 22 wide and three feet high; it attracted many admirers.

A silver cup offered by the New Jersey Social Florist Club for the best display of chrysanthemums arranged for effect was won by John N. May, Mr. Tricker being awarded \$15 special prize for his exhibit in the same class, which was also very fine. Carnations formed quite an important feature as the exhibit was large and very fine all throughout. John McGowan had Lizzie McGowan in excellent condition. H. E. Chitty had several varieties very

fine. G. Bergman, of Flatbush, took first prize for his new striped variety American Flag, which was greatly admired.

Among amateurs there was some very nice exhibits from A. Ballouch and R. F. Baldwin in chrysanthemums.

In roses the exhibits were very fine, E. Asmus taking first for Mme. de Watteville and Perle des Jardins; J. N. May first for American Beauty, Bride, Niphetos, Mme. Hoste, Duchess of Albany, Mermet, Gontier, La France, and for the best new rose with the Red Mermet Waban, which the committee also highly commended. Julius Roehrs also exhibited his new early hybrid in this class which was greatly admired by all who saw it.

For best 100 violets Louis Conrad, gardener to E. P. Steven, Esq., was first with a very fine lot; several others exhibited fine flowers.

A large bank of chrysanthemums not for competition put up by Richard Purdue made a very attractive display.

The society gave the Memorial Hospital a table for selling flowers, etc. which was well patronized. This was a double advantage, giving the Hospital funds to help the sick and advertising the show, which helps the society.

The display of seedling chrysanthemums was a great feature and never has there been seen so many really good ones shown before.

For the best seedling two blooms Mr. Keane, Englewood, was first with Fred Dornier, a rich creamy white, the petals being very long and twisted, having center petals of rich pink. The younger eight inches in diameter, full and double, very fine. Mr. Keane also showed a sulphury white reflexed double flower of great merit named Jno. Betterman. These have passed into the hands of Hill & Co., Richmond, Ind. Messrs. Pitcher & Manda were second with Gracie Hill, a tawny shaded blush flower finely incurved.

For the silver cup offered by Mr. J. R. Pitcher, T. H. Spaulding was first with six fine varieties, viz.: Jno. Firth, incurved silvery pink with tips of light yellow, extra; Lily Bates, a rich rose reflexed pleating flower; Onward, reflexed white high center, pink tips; Ethel Paul, very large full globular white of the Domination type; Ethiopien, crimson incurved with lighter reflex; Mrs. D. D. L. Farson, a lovely shade of pink, high center and whorled. All these flowers were finely grown and averaged six inches in diameter.

For the gold medal offered by Jas. R. Pitcher for the best seedling plant, John Thorpe won with a superb rich Jacqueminot crimson flower, perfectly reflexed petals three-fourths inches wide, flowers six and one-half inches in diameter, named George William Childs. Among other meritorious seedlings were J. C. Vaughan, rich plum amaranth; Ernest Asmus, amber; John H. Taylor, pink, white reflexed, large; Tommy Adams, bright gold; T. H. Spaulding, brilliant red; D. S. Brown, incurved yellow; H. M. Boies, rose; W. S. Kimball, blush; Hicks Arnold, bronze incurved; John Eyerman, rose pink; Frances A. Spaulding, lemon yellow; George Savage, white; John Goode, pink and lemon; Mrs. C. D. Adams, whorled white, lemon center. All of the above seedlings are of merit.

Other seedlings of merit were shown under numbers, which precludes notice.—NOTE.—All seedlings should be named when put in competition.

A new opponent in the seedling arena appeared in Wm. Craig, a son of Robert Craig.

Among the very fine cut flowers the following new varieties of '80 were produced and A. No. 1, Molly Bawn, J. T. Emten, Mrs. H. Jamieson, Alberti Linden, Ada Spandling, Flora McDonald (fine), Aureole, Cyclone, Rohallion, Mimic Wamwaker, Mrs. C. Dissell and H. E. Widener.

In the Osterich Plumbe section Messrs. Peter Henderson & Co. show the pink Louis Bochner magnificently, twelve flowers, each being six by four inches in size. It is an acquisition. In this section there are now in sight a yellow, a bronze, a peach and a half dozen whites. Look out for them. JOHN THORPE.

Eric Pa.

The Eric Chrysanthemum Club's annual show for the year 1890, took place in the rink on East Eleventh street, November 4, 5, 6 and 7, and it has been a pronounced success in every sense of the word. The club's experience is yet limited and its membership is not large, but the exhibition has been creditable in a high degree and the public appreciation of the club's efforts has been testified in the liberal patronage accorded. The show was not confined to the chrysanthemum, although that flower was made the principal feature. There were five general exhibits by florists, of general greenhouse plants, including palms, bananas, screw pines, ferns and other foliage plants, each exhibit by a florist being required, however, to contain at least fifteen chrysanthemum plants in full bloom. There were also several table displays of roses and other cut flowers, all of which were good. The greenhouse displays were for exhibition purposes only, and to afford variety and lend a pleasing feature to the general effect. It may be said of all that they were good. The splendid palms, loaned by Hon. W. L. Scott, were very effective. They are probably the best in the state.

Coming down to the competition it is well enough to begin with the distinctive flower of the show. The best chrysanthemum display, without referring to the decision of the judges, was that of Mr. H. Tong. It included, in the display of potted plants and cut flowers, at least 100 varieties, many of them seedlings of his own propagation and some of them recently christened by him subject to the approval of the National Association. One he named Wm. L. Scott—a splendid large flower, sometimes 30 inches in circumference, with incurved petals of deep or dark crimson upon the upper or inner surface, and pale pink or whitish on the outside or lower surface. The Thora rose is a pale primrose yellow, straight petals, large flower and very profuse bloomer. The Nellie A. Tong is crushed strawberry in color, quite flat but large, a free bloomer and easy to cultivate. The Mathilde Townsend is cream color to blush, according to the light in which it is grown, large flower with incurved petals and received a large amount of admiration. The Massasanga—named by the newspaper reporters—is a deep rose pink, with twisted incurved petals, good size and handsome. Mr. Tong's display of chrysanthemums covered a space of 600 square feet and was the most attractive feature of the show.

Next in importance to Mr. Tong's was the exhibit of Mr. Henry Niemeyer. He displayed fine examples of forty named varieties including the Mrs. Alpheus Hardy. They were all on long stems and advantageously placed so that the effect was admirable. None were of his own origination, however, although he is pre-

paring himself to give more attention to this in the future.

Mr. John Trast had many chrysanthemums in his display, but none of them of special interest. Mrs. W. Niemeyer had a good exhibit of twenty or more varieties.

Pitcher & Manda, of Short Hills, N. J., exhibited twenty choice named varieties, and Peter Henderson, of New York exhibited the Louis Bochner.

In carnations, there was some rivalry. H. E. Chitty, of Paterson, N. J., exhibited eight named varieties, and Mr. Tong had seven. John McGowan, of Orange, N. J., had also an exhibition of carnations. In the white varieties, Mr. Chitty was easily the best, but in colors Mr. Tong was quite his equal.

CHRYSANTHEMUM GROWN TO SINGLE STEM
AND SINGLE FLOWER

The exhibit of roses was very fine and the rivalry was between H. Niemeyer and Mrs. W. Niemeyer, of Erie. The former had the greatest number of varieties, but the latter the largest display.

The amateur department was well cared for and highly creditable. Taken altogether the show of 1890 was an improvement over that of 1889. Mr. Tong's display of growing chrysanthemums was inferior to that of a year ago, but his table display was much better, and so was every other department of the show.

First premiums were awarded to H. Tong for best 25 plants, 12 varieties; best 12 plants, 6 varieties; best 6 plants, 6 varieties; best specimen plant; best 150 cut blooms, not less than 25 varieties; best 60 blooms, ten varieties; best display cut blooms in vases; best collection hegonias. Mrs. W. Niemeyer received first for largest and best display of roses, largest and best display of cut flowers of any kind, corsage bouquet, anchor of cut flowers and center piece for table. H. Niemeyer took first for best design in cut flowers, floral harp, basket design of chrysanthemums, 12 plants geraniums and hand bouquet of chrysanthemums. Y.

Short Hills, N. J.

From the appearance of the number of chrysanthemums grown around New York, it is evident that no change in the interest taken in them is yet apparent, neither is the limit to perfection of form and color in the flower yet reached; for some of the seedlings now in flower at Pitcher & Manda's exhibition of chrysanthemums, show a marked advance upon previous types.

This exhibition as arranged by this firm, is again creditable to their capability as growers and business men. The plants are grown with skill for the purpose for which they are intended. This purpose being not large specimen plants, but plants that take up but little room, yet producing fine blooms; most of the plants are grown in boxes containing eight to twelve, each plant averaging four to six flowers.

Among the seedlings noticed as improved forms, was one that is a decided advance upon "Mrs. Alpheus Hardy." The flower is more hairy, of a rounder form, and produced with a shorter neck, and stiffer stem. Among the yellows, a seedling of a pale lemon shade promises to be quite an acquisition. It is incurved, of fine form and striking appearance. A pink seedling also very fine, from 9 to 10 inches in diameter. Some other seedlings are also desirable, but as none are yet named description would at present be of little advantage.

Of the seedlings sent out last year, Mrs. Grace Hill, and Excellent are prominent as holding a conspicuous place. Both of these deserve a place in any collection, for any purpose for which chrysanthemums are used. There are also a number of chrysanthemums yet to perfect their flowers and which the firm are holding back for the exhibition they purpose having later in the month, at the Madison Square Garden.

The chrysanthemums however are not the only interesting feature at this establishment. The collection of cypripediums is in itself well worthy of a visit. According to Mr. Manda's estimate its valuation is \$140,000 and exceeds in size any other three collections in the world. A great many of these are seedlings, hybrids raised at Short Hills. There are 1,500 cypripedium seedlings, small plants, yet to flower, all in the best of health. A variegated one promises a new departure. C. Fairieum, C. magniflorum, C. tonsum superbum, C. tessellatum porphyreum, were in flower, and noticeable for their unique appearance.

A new range of houses is now completed. These houses are built in the most appropriate manner, and will no doubt answer fully the purposes for which they are required. Two or three extensive ranges are yet to be added. The whole, when finished, will rank as one of the largest and best arranged places in the country.

ALFRED E. WHITTLE.

CEDAR RAPIDS, IOWA.—The "Mikado's Garden," projected by florist H. G. Higley, is reported by the local press to have been quite a success. The "Garden" consisted of an exhibition of chrysanthemums held in a large tent, among which were eighteen booths erected by various local churches and charitable institutions. In a word it was a combination of flower show and church fair, in much the same line as the Detroit Flower Festival of last spring. Prizes of \$50 and \$25 were given by the projector to the institutions having the most tastefully designed and handsomely decorated booths. A rather alarming feature was the award of a

prize, consisting of a string of gold beads, to the "most beautiful young lady." It is not stated whether the judges making the award were placed under military protection afterward.

A Ramble Among the Mums.

Yesterday I treated myself to a trip through the north eastern part of New Jersey and away to Pearl River, where Mr. John Thorpe holds court with his especial favorites. I was highly pleased with my visit and saw many charming forms of the now popular autumn flower.

To say that Mr. Thorpe has a splendid collection is to use a very mild expression; his houses contain the very cream of the new and older varieties, as well as many seedlings of undoubted merit, and I am no prophet if some of these do not cause a very wide expansion of the optics of even some of the quidnuncs. Some of those the names of which Mr. Thorpe has already pre-empted are marvels in form, size and color, and most of them will be on exhibition at some of the many shows which occur during the next thirty days.

Thos. H. Spaulding is probably the nearest approach to a perfect scarlet yet seen in the chrysanthemum. *Esperanza* is pink and white, of very distinct and unique form.

Tommy Adams is a rich deep orange of magnificent form, in fact many of these new forms abound in new and varied features, wonderful combinations of color and marvelous construction of flower, and the thought occurs to me while writing that to do anything like justice to some of these fantastic forms one needs to be endowed with descriptive talent far beyond that bestowed upon the ordinary mortal.

I wonder what John Salter would say if it were possible for him to revisit us in the flesh and behold the mutations that have taken place with his favorite flower. I remember when Annie Salter made her debut, she was regarded as a wonderful production at the time, but, oh, how changed are chrysanthemums now; once in a while we see one of the old incurved type, but they become scarcer every year. But to recur to my subject.

In addition to the many fine seedlings which will be heard from later in the season, Mr. Thorpe has a full assortment of previous introductions, all of which appear to be in accord with the wishes and prospects of their grower, while their vigorous growth, immense size of flower and exquisite colors indicate great care and most skillful culture.

At the time of my visit Mr. Thorpe's earliest varieties, which were grown in frames and sheltered with muslin, were nearly all disposed of, but their appearance would seem to indicate that a large crop had been harvested.

In a snug corner of the front of one of the houses Mr. Thorpe has carefully stowed away a choice (?) collection which he had at considerable expense of money, time and anxiety imported from France last spring. I noticed that Mr. Thorpe regarded these with a very peculiar ex-

pression of countenance—a combination as it were, of misplaced confidence and disgust, mingled with considerable of a desire for revenge, and when he explained the matter to me I was in full sympathy with him, for the collection would have been a disgrace forty years ago. There was not even a respectable one in the whole lot, and I thought if that was anything like a fair sample of the best efforts of the French growers they had better be in some other business and leave the chrysanthemum in more competent hands.

Mr. Thorpe has a splendid collection of single flowering dahlias which yesterday appeared in the very height of their glory, but this morning with thermometer at 24° what a sick dejected looking lot they must be, but such is the inevitable.

H. E. CHITTY.

Paterson, N. J., October 31.

ties, which were shown at the Chiswick Chrysanthemum Conference of last year. The examples struck us as exhibiting a good style of growing these plants for small conservatories and greenhouses, and for standing in bowls and vases in the dwelling. The pots were 32's, and the total height of the plants not more than 20 inches—decidedly improvements on the lanky examples all round, which had evidently many unclothed legs to stand upon.—*Gardeners' Chronicle*.

Seeding Chrysanthemums of 1890.

The following are perhaps the first sold this season and the purchaser was but a few minutes making the bargain.

Margaret Gammon, bright rose pink, reverse of petals silvery pink, very large, broad petals with whorled center, new in color and altogether a very fine variety.

TRAINED CHRYSANTHEMUMS. UPPER ONE, FAIR MAID OF PERTH, THE LOWER, ELAINE.

Single Stem and Single Flower.

Chrysanthemums grown to single stem and single flower are becoming more and more popular as exhibition plants. They invariably attract much attention and are greatly admired by the general public who are at once interested in seeing a great handsome flower on a stem rising from a 4-inch or 6-inch pot, and though they are but single flowers the quality is such as to arouse enthusiasm. The engraving is from a sketch of one of the plants shown by Mr. M. A. Hunt at the Chicago show last week.

Trained Chrysanthemums.

Our illustration shows two well flowered and grown plants of popular varie-

ties, Emma Hitzeroth, very large clear yellow, broad petals and promising to be a very fine variety.

Mamie Craig, white with beautiful shading of pink in center of flower, the petals being delicately veined and striped which gives it a very cheerful finish, large bold perfectly round flower in the way of Mrs. President Harrison, but altogether a much finer flower.

Looking Backward, deep purple, a bold flower, the petals forming a whorl which suggests the idea that they are looking from you no matter which way the flower is turned.

Bob Sawyer, lilac crimson and pink shading, a large bold flower, true Japanese and very suggestive of Dickens' popular character, being free and easy, always

good natured with a bright smile under all conditions.

John N. May, deep crimson, very large bold flower in the way of Mrs. Carnegie, but much finer in every way, reverse of petals bright plum color, acknowledged by all who have seen it as the finest very dark chrysanthemum yet seen.

All six are extra strong and fine vigorous growers and are a remarkable production, grown by Mr. Robert Craig's son, W. P. Craig, at John N. May's nurseries, Summit, N. J., and sold by him to Thos. H. Spaulding, of Orange, N. J., for \$200 on October 27. They are selected from 25 plants only. W. P. Craig can well afford to feel proud of his first attempt at raising seedling chrysanthemums. N.

Japanese Names for "Mums."

In the *Pacific Rural Press* for November 8 appears a report of the chrysanthemum fair at Los Angeles, Cal., which relates how two Japanese gardeners who were employed there tore the labels from plants received from the east and relabeled with the Japanese names, giving the English translations of same. According to their statement the correct name of the Mrs. Alphus Hardy is "Mikako's Palace." Names attached to other plants by the Japanese gardeners were the Mikado, Sunrise, Moon in the Window, Light of the Moon, Heavenly Beauty, Yellow River, Abundance, Prosperity, The Bridgroom, A Thousand Sparks, Eye of a Snake, Talons of an Eagle, Hand of a Devil, Firewing, Ansanoma (a city in Japan), Flying Crane, Beauty of Castlewood, Crystal and One Voice.

CHRYSANthemum Desdemona, one of the recently introduced French sorts is quite warmly recommended by Mr. Peter Herke, Cleveland, O., as being a valuable variety for market plants, being dwarf in habit and a remarkably free bloomer. The flowers are but medium size, quilled, white tinged with pink. Mr. Herke has a seedling, the flowers of which are very double. Unfortunately, however, the color is a purplish pink tinge. If the color were brighter it would be an acquisition.

CORRECTION.—The price of *Gloriosum* as recorded in issue No. 126, should have been \$15 per 100—not per dozen. Your correspondent "F" should also correct his statement from 60c. per dozen to the figures as above. E. L.

Argyrea and Cosmos.

B. writes from Michigan: "I notice in *Am. Florist* your note regarding *Argyrea tiliaefolia* and will say that it accords exactly with our experience, except that we had one flower on one of the vines. The cosmos we cannot get to bloom out doors here without first almost starving it in pots to make it set buds. If then set in the open it blooms freely."

The generic name *argyrea* was suggested on account of the silvery undersides of the leaves of the different species. But not one of our plants of *A. tiliaefolia* showed this silvery character. William Davison, of New York, however, tells me that in P. Henderson & Co's trial grounds one of the plants displayed this silvery lining very markedly. F.

ALBUQUERQUE, N. M.—Florist Byron H. Ives recently made a display of chrysanthemums which was much praised by a local daily. The "Queen of Autumn" already has a firm hold of the affections of the people in this far south-western city.

Solid Beds and Raised Benches.

It is not roses alone that can claim attention on this point. Carnations have a hand in it also; in illustration I give a bit of my personal experience.

In planting a solid bed the soil must first be taken into consideration; as the same results might not be obtained on a heavy soil that is naturally cold and damp. My soil is of a miscellaneous order with a sandy subsoil, it is naturally warm and dry and can be watered without danger of becoming water clogged.

The heat in houses planted solid, is along the posts supporting gutter plates and is all above the tops of plants. In those planted on benches the pipes are about fifteen inches below the bottom of the bench and none overhead.

As to planting solid beds the plants are brought in early in September and planted on orders that are not wanted up it is simply a garden under glass with three and a half foot beds and a pathway of eighteen inches. This gives the air a chance to circulate among the plants and keeps them healthy and clean the season through.

These beds give better results in every way from Silver Spray, Wm. Swayne, Portia, Wilder, Tidal Wave, Anna Webb and Hinze's. I have a number of other varieties on trial, among them Fred Creighton, which seems to be more vigorous on solid beds. Mrs. Fisher, I intended planting 500 solid and 500 benched, but it is such a strong grower that I did not wait for bench room; they are doing well where planted and look as though they would rival the old De Graw for blooming.

My bench plants are put in latter part of September with four inches of soil, made moderately rich with well rotted manure. From these I get extra fine blooms of Lambton and Harrison, while on solid beds they produced 50 per cent of flowers that were not fit to use. E. G. Hill, Chester Pride, Buttercup and Geneva also do better here although the difference is not so marked.

There is one point in favor of the bench above solid beds, you can force your plants to death much quicker. But as to earliness and continual blooming I find the solid beds ahead of benches always, one reason is that they are started about two weeks earlier, but I find that plants on benches do not start as well in warm weather. After November 1 there is very little difference either way, but by March 1 to 15 the benches are pretty well exhausted, while those on solid beds are going right ahead. ALBERT M. HERR.

Seasonable Notes.

As the glory of the chrysanthemum wanes and its season draws to a close, then is the value of the rose and the carnation more and more appreciated, and while we may expect that the demand will be slow during October and early November, towards the middle of the month the demand for all these flowers increases and prices are sure to increase also. And one of the principal advantages in carnation culture is the fact that as the season advances the flowers greatly

improve in color, size and length of stem—features which add to their value as the demand is more assured, in fact early in the season as a rule carnation flowers are far from perfect, except in cases of extra favorable circumstances and very early flowering sorts.

When writing an article which appeared in the *FLORIST* of October 1, I remarked that I had discarded Hinze's White and had planted Lambton in its place, and that I would report results as season advanced. To say that I am satisfied with that move is an exceedingly moderate expression of my satisfaction with results so far; there has not been a time since October 1 when I could not go into the house and gather a few hundred long stemmed flowers, and such flowers; (well I will leave that for another occasion). And the beds now are literally a mass of buds in all stages of development, indicating a continuous crop for a long time to come. I am more than pleased, and think it the best carnation move that I have made in some time, I am keeping a strict account with the house, and for the benefit of growers will here say that I get fifty cents per dozen for these Lambton flowers right along.

I am also growing Tidal Wave quite extensively this season. It is a very free bloomer, good grower, long stems, splendid color, and in every way most desirable.

In crimsons or maroons I have Orient, Anna Webb, Emperor of Morocco and Pride of Kennett. Of course it is rather early yet to speak conclusively about the intrinsic value of these; the three former are all splendid varieties, but the flowers being quite large and the stems very slender causes them to droop over badly. Anna Webb is a little better than the other two in that respect, but Pride of Kennett has a stem stiff enough to carry the flower perpendicularly, which seems to me a matter of very great importance in a carnation.

For a pink one I still cling to Grace Wilder although I have Fred Creighton and Christmas in small numbers. This season should in a measure determine the respective values of these new pink sorts.

The larger part of my Grace Wilders are still out in cold frames in pots and they appear in the most complete rugged health, this afternoon we have begun to remove two or three kinds of the earliest chrysanthemums and will at once fill up the space with carnations from pots.

Judging from what I have seen I should think the prospects for a good carnation year are excellent—far better than last year's. The general condition of the stock is much better, and the weather, although we had a good deal of damp raw weather in October, it has on the whole been quite mild, which has reduced the need of fire heat to a minimum, in fact with my fire heat so far has actually been unnecessary, and the bright clear weather since November came in is all that can be desired in carnation culture.

Continue to give all the fresh air possible both night and day, and maintain cleanliness in the fullest and strictest sense. I was at an exhibition the other day where some carnations were staged that had evidently been grown in a much higher temperature than was good for them; if the flowers had ever opened they had prematurely closed again, and they certainly presented anything but a lively front; people who treat carnations as hot house plants must expect some disappointments. H. E. CHITTY.

Patterson, N. J., Nov. 7, '90.

GERMAN IRISES

New Carnations—Notice.

The undersigned has been appointed by the Florists' Club of Philadelphia to prepare and read a paper at the next meeting—which is to be held Tuesday evening, December 2—on "The Improvement of the Winter Blooming Carnation," and he would be pleased if raisers of new varieties, or those who may have such sorts

in their possession for distribution, if they would forward flowers of meritorious kinds, either improvements on existing varieties or new types, seedlings or sports, for the purpose of illustration as to what has been accomplished up to date, and very greatly oblige.

Yours truly EDWIN LONSDALE,
Wyndmoor, Chestnut Hill.
November 8, 1890. Philadelphia.

German Irises.

These are the common large irises with surface-spreading rhizomes and which are so plentiful in gardens throughout the country. They are very easy to grow, perfectly hardy, free flowering and satisfactory plants, and bloom in early summer, late May and June. As they have been common garden plants for hundreds

of years and are easily raised from seed which they produce in large quantity, we have, as might be expected, a multitude of varieties of German irises, some exceedingly handsome and others dingy and unattractive enough.

Among good varieties are: Albicans, white; Celeste, lavender; Comte de St. Clair, white and violet; Darius, yellow, lilac and brown; Fairy Queen, lavender; Graculus, pale yellow and purple; L'Innocence, white and purple and orange; Mlle. Elmira, pale blue; Mme. Chereau, white and violet; Queen of May, rosy-lilac, and Victorine, white and purplish blue.

These irises like an open place to grow in, land somewhat light rather than heavy, and so arranged that water drains off from it readily, but really they grow luxuriantly anywhere and often under the most neglectful circumstances. The chief danger from ill-drained land is in causing the rhizomes to rot. And to avoid this trouble we should in planting always keep the rhizomes on top of the ground; also, if we are in the habit of scattering some manure or litter over them in winter to save them from sudden freezing and thawing, be sure to have it removed after the crowns early in spring.

These large bunches of these irises are handsome for house decorations I do not think it would pay the florist to grow them for cut flowers and this is because the individual blooms last open for one day only. Of course the advanced unopened buds expand day after day in water as they would were they still upon the growing plants. But we all know that when cut flowers fade, instead of picking off the withered blooms and waiting for the other buds to open, folks generally dump the whole into the ash barrel at once.

The chief value of these irises is as garden decorative plants, and for this purpose florists can grow and dispose of them feeling assured that they are supplying their customers with plants that will grow well, flower abundantly and beautifully, and live forever without any special care from any one.

In the same section with the German iris we include the fragrant *Iris Florentina*, white tinged with blue, and *Iris pallida*, pale blue, and one of the boldest and handsomest of the race.

There is also a host of other irises. Some, like *Iris reticulata* and *I. Kolpakowskiana*, come into bloom at the same time as do crocuses and Siberian squills, and are soon followed by the different varieties of spring irises (*I. pumila*) and so on through a host of species till we wind up about the end of June or early July with the gorgeous *Krempfer's* irises from Japan. I would here remark that I had Ondine last summer eleven inches across.

Iris cristata from the Alleghenies is one of the prettiest surface spreading dwarf sorts we have got, and *I. lacustris* from the Great Lakes one of the choicest little gems.

Iris Siberica is the weed among garden irises, more so than the yellow flag *I. Pseudo-necorus* or our wild blue flag, *I. versicolor*, for its self-sown seedlings come up all around with the persistency of heliopsis or other weedy composites.

The English and Spanish irises (so called) are bulbous species well worth growing by any one who has a warm, sheltered nook with rather light soil. Plant them as you would tulips or daffodils and in fall. The Spanish irises bloom early in June, the English ones late in June.

W. F.

Cattleya Gaskelliana.

This cattleya was introduced from Venezuela about seven years ago, and welcomed as a great acquisition to the summer blooming section of this showy genus. It is probably only a geographical form of *Cattleya Warneri* and closely resembles the variety *pallida*, both in growth and inflorescence. The flowers are very variable in color, the rarest form being pure white, and others can hardly be distinguished from *Warneri*. The most numerous have rosy sepals and petals with a blotch of rich purple on the anterior lobe of lip, which has a crisp margin and an orange yellow striated throat.

C. Gaskelliana grows and flowers freely in small well drained pots and not over much compost of peat and moss, strong heat, abundance of water and air during growth, with as much sunlight as can be given them without burning the foliage. As soon as the flowers have formed the plants should be subjected to a cool, airy and comparatively dry treatment until new growths appear the next season. Though this species is plentiful and reasonably cheap, it is not such a great acquisition to the general florist on account of its flowering too early in the season, but this objection may probably be overcome by judiciously retarding the growth as long as possible in the spring. I have had some plants in bloom when the early *Trianes* opened—and have a few flowers open now.

F. GOLDBERG.

Slingerlands, N. Y.

Notes on Flowering Plants.

The Cape Jasmines, or gardenias, form a useful group of cool-house flowering plants, and though well known in the trade yet are but little used.

This may not be due, however, to any fault in the flowers of these plants, as the demand may not have been sufficient to warrant their being grown in quantity, and the fact remains that gardenia flowers are both handsome and durable, and will pay for the space occupied, if used as an addition to the regular stock of cut flowers for a local trade.

The cultivation of gardenias is quite a simple matter, and requires but little explanation, but to begin with the first operation, they are propagated by means of cuttings, the latter being made from firm young wood, and placed in a moderate shade, watering, etc., they soon root, the best time for this operation being early in the spring, as the young plants then become nicely established in time for planting outdoors at about the middle of May.

A moderately light soil is preferable for potting, for instance, one-third peat to two-thirds good loam, and some sand, but the peat is not indispensable. As these plants are naturally of quite a bushy habit but little pinching is required to keep them in shape, but if any individual plant should become straggling in form, it may be easily remedied with the knife, as gardenias will endure severe pruning and break away freely afterward.

When planted out during the summer they should of course be lifted before frost, else both foliage and buds may suffer.

Probably the finest variety of this class is *G. Fortunei*, a strong growing and free flowering plant that was introduced from China a number of years ago. It produces large, pure white flowers which are of similar form to those of the well-known *G. florida*, and like them also in being very fragrant. *G. Fortunei* is a handsome plant both in foliage and in flower, its glossy, dark green leaves being very attractive and forming the best possible background for the flowers.

The next in value is *G. florida*, to which reference has already been made, and which is probably the most familiar variety in the group. Its pure white, waxy-looking flowers are often to be seen in the larger flower markets, though they have not yet become as fashionable for buttonhole flowers here as they used to be on the other side of "the pond."

G. radicans is also a useful sort, and is more dwarf in all its parts than the preceding. It makes a low spreading bush, with small bright green leaves, and produces its medium-sized white flowers in profusion.

The variegated form of the above is also an ornamental plant of some value, the variegation consisting of a marginal line of white or yellowish white on the leaves. The latter grows and flowers about as freely as the type and is really an interesting plant, and likely to prove useful in a general florists stock.

Another cool-house plant of much beauty is *Rhynchospermum jasminoides* (or as it is now known, *Trachelospermum jasminoides*), an easily grown plant of scanty habit and very free flowering. It seems almost unnecessary to offer description of this plant, but it may be stated that it is a hard-wooded climber with small shining opposite leaves and pure white flowers, the latter being produced in clusters on the young growth.

This *rhynchospermum* ordinarily flowers during the spring and summer but may be forced into bloom during the winter, and would doubtless give an elegant effect if used in sprays among Maidenhairs in a mantel decorated with flowers.

Rhynchospermum is also propagated by cuttings, and may be grown on quite rapidly in a warm house if needed, though a high temperature is not necessary for its welfare. Good drainage should be given to the pots as this plant is somewhat impatient of stagnant moisture.

Chorozeema cordata is an old-fashioned New Holland plant that would bear more extended use among spring flowering plants, its pea shaped flowers of a mixture of red and orange being very showy.

This chorozeema may be grown well in pure loam and sand or in a mixture of peat and loam, and soon becomes of useful size, for the plants will flower when quite small. Old plants that are kept over from cutting from, may be given a hard pruning after the flowering season is over, and will soon start into growth again. Regarding temperature the chorozeema will flourish under similar conditions to those afforded geraniums, and about the only insect that troubles it is red spider, which of course may be avoided by thorough syringing.

W. H. TAPLIN.

Marketing Cut Flowers.

How to get the flowers from the various growers into the hands of the florists who want them in various quantities at irregular intervals and with the least amount of loss is a problem which demands our attention. Any mode of solving this problem which would make

FLOWER OF CATTLEYA GASKELLIANA—LIFE SIZE.

it possible to discriminate between different parties I am sure is of no value. We must have a system by which all growers and all consumers are treated alike. The plans which I have recently heard mentioned, of forming a large joint stock company appears to me to be but a commission business with many proprietors, which is undoubtedly good, but the main object is not attained. There will be just as much kicking from all sides then as now. For the sake of getting others to give us their views on this subject I wish to suggest a plan which I think is at least worthy of some discussion. I think it does away with the flower market; it excludes all discriminations, it saves many losses, it will facilitate the distribution of flowers to where they are most needed at different times, it will save running expenses to a considerable degree, it will put us all on our own merits and at the same time give us the advantages of a combination, and if entered into with a proper spirit it will at least keep all good stock out of the fakir's reach, and it can be tried without causing any revolution whatever.

The plan is as follows: In all large cities the commission men and florists to form an association and appoint an inspector, one who understands flowers. It shall be the different inspectors' business to get together and establish a scale of quality for all flowers, say roses to be 1, 2, 3 and culls; carnations 1, 2 and culls.

And these grades should be maintained the year around. We are now in the habit of calling the best you can get No. 1, no matter how poor that is, but this should not be. A rose which is not perfect should not be called No. 1. The inspector should be put in charge of a floral warehouse which is to be arranged for storing flowers to the best advantage. When a grower sends a consignment of roses to Chicago to be handled by, say John Smith, he sends the case of flowers marked John Smith in care of inspector's warehouse with a ticket inside stating how many of each variety and their quality. The inspector examines them and if they are properly graded and counted has them carefully stored and marks the ticket O. K., and sends it over to John Smith. Mr. Doe sends a box of roses for Roe Bros. They go to the warehouse in the same way and Thompson sends a box full to Jones. Then all the Chicago roses will be in the one warehouse properly cared for and graded by a disinterested party. Each commission house has their stock represented by tickets on their desk. As their orders come in they make drafts on the warehouse for the stock which is placed to their credit; whether Jones gets Doe's roses or Thompson's no one knows, he simply gets so many of such a quality and variety. If Smith sells all his and wants more he can inquire of inspector who has any left to their credit and get an order from that party for more. The

commission men will check out their flowers the same as they do their money from a bank.

The advantages thus far are: The florist who orders 50 No. 1 Mermets knows that he will not get No. 2 and be asked to pay for No. 1. The commission man can not send out No. 2 roses to fill an order for No. 1, because the rules require the inspector's ticket to be put in with the flowers. The grower who grows only second quality stock can not kick at the commission man for not working his roses off at better prices, because the inspector has classified them according to rule.

At the end of a day's business the commission man will have to credit his growers for the stock sold, and there is only one proper way of doing this, credit each grower an amount in proportion to the size of his consignment to the amount sold. If A sent him 50 Mermets No. 1, B sent 100 Mermets No. 1, and C sent 50, and he sells 100 in all, then credit A with the sale of 25, B with 50 and C 25. It is very simple and impartial. The inspector can report each morning the amount of stock left over from the day previous, and this will serve the commission men means of determining what the price should be. The inspectors of each city can report to each other by cipher dispatch each day the stock on hand, in this way the entire crop of flowers would be under economical control.

Address THE AMERICAN FLORIST CO., Chicago.

THERE CAN be no question as to the wisdom of a daily change of, or addition to, the floral arrangements and cut flowers at exhibitions. A new competition each day maintains public interest and above all it gives the newspapers something new to talk about and insures liberal daily notices of the exhibition in their columns. And to secure the fullest benefit from such daily changes large playcards announcing the competition for the following day should be prominently displayed in the exhibition hall. A printed programme for the week is also of material value.

THE RAPIDLY increasing use of orchids in all elaborate floral arrangements has brought about a demand which is becoming more and more in excess of the supply. As the time for the fall exhibitions approached it was practically impossible to secure any quantity of good blooms, as far-seeing competitors had placed advance orders for the entire cut of the growers. And does the orchid take the place of the rose or any other flower? Not at all. The same number of roses and other flowers are required. The orchid takes a place which it and it alone can fill, and which it has made for itself.

THE GREAT VALUE of Asparagus tenuissimus as a "stayer" in decorations was last week again brought forcibly to mind. Of two mantels one was finished at the top with a plant of Adiantum Farleyense, the pot being necessarily on its side, and the other had in the same position a loosely arranged mass of the asparagus merely attached to damp moss back of it. After three days exposure at the exhibition the poor fern showed the effects badly while the asparagus was as fresh as when first placed in position.

WE HAVE received quite a number of letters congratulating both the management of this journal and the trade upon the recent change of the FLORIST from a semi-monthly to a weekly. We thank each and every one for their congratulations and kindly wishes. We would however recommend the application of a cloth which has been wrung out of ice water to the forehead of the correspondent who asks: "When will you make it a daily?"

A MATTER for congratulation is the vast improvement in the public taste as regards floral arrangements in the last few years. The awards made at the Chicago exhibition by a committee composed of twenty society ladies was a striking illustration of the demand now made by users of floral decorations for grace in arrangement. Simple, airy, graceful arrangements found most favor with a large majority of these judges.

SINCE our November 1st issue appeared we have learned that there is not as much

danger as at first seemed imminent of the classification submitted by the committee to the World's Columbian Commission, being adopted by that body as submitted. We have reason to believe that the power which will take final action recognizes the importance of horticulture in the exposition and will see that it is given adequate space and proper management.

THIS WEEK no less than eighteen chrysanthemum shows are being held in various cities throughout the country. This number covers only the competitive exhibitions. If we were to include the various shows which are displayably, or chrysanthemum "fairs" the number could easily be doubled and probably trebled. And the chrysanthemum "craze" still grows.

THE AMERICAN FLORIST reaches the entire trade in America. An advertisement in these pages goes to every possible wholesale buyer of florists' goods on the continent of North America. We have also quite a list of subscribers in England, France and Holland and scattering ones in every civilized country on the face of the globe.

ONE of our subscribers, Mr. J. C. Luitweiler, York, Pa., writes a note warmly recommending the sphincter grip armored hose as remarkably durable. He states that some of this armored hose, which he has had in daily use for four years is as good as the day it was purchased.

SUBSCRIBERS who fail to receive their paper promptly, or who miss an issue, will confer a favor on the publishers by promptly notifying this office of such delay or omission. Please do not wait until several numbers have been missed before making complaint.

FOR the exhibitions have your tickets numbered from one up to the number of admissions you hope to have. Instruct the ticket seller to give them out serially and then you can tell at any time how many have been sold.

IN THIS ISSUE appears an article on marketing cut flowers by C. B. W. which will probably be liberally criticised as visionary. However, we print it in the hope that discussion may bring forth something practical.

MR. JOHN BURTON, of Chestnut Hill, Philadelphia has, we believe, the honor of being the first florist to be elected to the legislature in Pennsylvania.

GRACE and SIMPLICITY in floral arrangement is certainly the order of the day. Cumbersome and heavy arrangements are not cared for.

A WESTERN firm recently received an order from Australia through their advertisement in the FLORIST.

Boston.

Chrysanthemums everywhere. The florists' windows are gorgeous with great masses of *Kioss*, *Calliagordis*, *Hardys* and *Cannells*, the entire cut of the stands are fairly groaning under their load of bloom, the ladies wear great corsage bunches of them and occasionally an aesthetic truckman even has his horse's ears decorated with the resplendent clusters. Roses feel the pressure this week and are no longer scarce in the market.

Violets, lily of the valley and carnations continue in short supply. Most of the growers have just now got a good dose of violet disease on their hands.

The subject for discussion at the November meeting of the "Gardeners' and Florists' Club" was "Chrysanthemums." The meeting was very well attended and the discussion brought out many valuable thoughts. It was voted that the annual supper of the club take place as usual in January and a committee was appointed to make the necessary arrangements. A unanimous vote was passed disapproving of and protesting against the adoption by the World's Fair Commissioners of any plan whereby the Horticultural Department should be merged into the Agricultural, and directing the secretary to transmit a copy of said vote to the commissioners.

All indications point to a fine chrysanthemum show this week in Horticultural Hall. Many new seedlings will be shown, and the cut flower department of the exhibition promises to be exceedingly fine.

The new rose, the "Waban," will be exhibited for the first time. This rose is a sport from Catharine Mermet, and originated at the Waban Conservatories of E. M. Wood & Co. The color is a deep brilliant glowing pink, entirely free from all traces of the lawlessness which is seen in the old Mermet when placed alongside Gabriel Luizet, Mrs. John Laing and such roses with pure tints. The color keeps well and the rose being rather more double and solid than a Mermet will undoubtedly be a good "shipper." The growers say that the color is equally bright in cloudy or in sunny weather.

Mr. Louis Davenport, of Milton, died on October 31st, at the good old age of 83 years. He was widely known and respected, and his genial disposition made him many friends. Few florists are aware that Mr. Davenport was the first florist in the United States to cultivate the smilax for commercial purposes, some twenty-five years ago, and that he is therefore entitled to the credit for its introduction.

W. J. S.

Philadelphia.

Do we want anything? Well, I should say not, the window is full, the ice box is packed and we don't know where to put the last lot of stuff that's just in. This and something similar is the kind of conversation one hears in almost every cut flower store. During the past week business has been quiet and flowers of all kinds very plentiful, and good ones at that. The growers seem to have been keeping their stock back as long as they could, but now it is coming in in spite of them, and as the chrysanthemums are now in full blast it is quite an interesting race, with the mums a few lengths ahead.

There is a fine stock of pot plants about. The varieties *L. Cannings* and *Ivory* taking the lead; these plants in 6-inch pots with fine blooms, wholesale for from \$3.60 to \$6 per dozen, in 8-inch from \$7 to \$12 per dozen. Fine blooms of *Bullock*, *Pres. Hyde*, *Mrs. Hardy*, etc., are bringing \$20 to \$50 per hundred. *Perles*, *Niphotos* and *Hostes* are 2 to 3 cents, *Mermets*, *La France* and *Albany* 4 to 6 cents.

It is now Hon. John Burton, member of the Legislature from Montgomery county. Quite a number of the boys took a trip up the river, but our friend John, not being partial to the saline atmosphere at this season of the year, remained at home and received the congratulations of his friends.

The ten pin alleys at the club house are about finished, they are the finest in town, laid in hard maple, by experienced men under the supervision of Mr. J. Westcott,

chairman of committee for fitting up club house. Mr. Westcott has worked very hard to have the job finished in time for the chrysanthemum show and is happy to say that it will be in working order by that time.

The Florists' Club is taking a hand at driving the flower fakirs off the streets and has appointed a committee to see if the ordinance prohibiting them can not be enforced. It will be a great fight as the fakirs are not easily frightened and will contest every inch of the ground, or rather sidewalk.

At the last meeting of the Florists' Club the following officers were re-elected to serve for the ensuing year: Robert Craig, president; Chas. D. Ball, vice-president; Henry F. Michell, secretary; Thomas Cartledge, treasurer. The annual chrysanthemum banquet is set for the 11th inst.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN POTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

MR. J. JOHNSON, with Oscar H. Will, of Bismarck, N. D., sailed for Liverpool on the City of New York of the Inman Line on the 10th inst.

INDICATIONS are that the contract prices on some varieties of seeds will be higher next year and some of the older seed growers will get back some trade.

UNDER the new tariff law, no refund will be made if perishable goods are found to be damaged or worthless on opening, but importers may examine goods on arrival and if worthless abandon the same.

THE ENTIRE crop of seed beans this year is so poor that several seedsmen propose to print on their bean labels a statement referring to the very unfavorable weather and the impossibility of furnishing a good sample.

THE *Rural New Yorker* advertises that it will give AWAY SEEDS OF PLANTS of important new varieties the coming season. While the *Rural* has done much good, is it quite certain that its 'exposures' are wholly disinterested? Is not the tendency of its criticisms to injure the mail trade of the most reliable houses?

The Government Seed Shop for 1891.

THE season of franked packages of seeds for rural constituents is just about to begin, and before it is over it is estimated that something like 6,000,000 packages of seeds of all sorts will have been sent out by the agricultural department. Last season 445,821 packages of seeds were sent out by the requests of congressmen, an increase of 7,130 over the preceding year. Added to these were a third as many more packages sent out by the department itself in response to requests made directly to it. The major portion of the work incident to sending out these seeds is done by girls. They are in a large part the same girls who were employed at the work last year, and are now beginning to get back to their old places again for this year's work. About fifty have already been taken and perhaps as many more will be added to the force later in the winter. Though many more seeds will be sent out this season than in any preceding year, less girls than heretofore will be needed to do the work, because it has been more perfectly systematized. The department has a special agent, Mr. R. S. Whittleton, who, at this time of the year, is out on the road traveling about the country buying fine seeds for the department wherever he finds them. For instance, once when he was going about the country he saw a patch of tomatoes that looked like peaches. He ate one raw and then had some of them cooked and found the new style of tomato excellent. He bought the whole field of them and they were sent out by the department last season. All seeds bought are scientifically treated before they are paid for and unless 75 per cent. of them germinate when tested they are sent back where they came from. A few weeks ago an eastern firm tried to palm off some bad seeds on the experts and several tons

were sent back, having failed to pass the tests. Last year was the first season during which a special agent was kept in the field to look for exceptionally good seeds for the department, but the plan proved so admirable that it is being continued this year.—*Brooklyn Eagle*, Oct. 26.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XVIII.

A FEW WORDS ABOUT TRADE MARKS.

Well, I'm inclined to agree with you. This is not a very honest world. Competition runs high and in the scramble which ensues men don't hesitate to profit by the labor of others without making just compensation therefor.

You say that several years ago you adopted the motto "Resurgam" I shall rise again for your seeds and that every package bore your firm name with that Latin word thus "Resurgam Seeds." Now some other house has adopted your idea and refuses to acknowledge that you have any exclusive right to the use of the word.

You say that you neglected to register the word as your "trade mark." I don't think that will make any difference. The law is inclined to protect a man in the enjoyment of all his commercial rights. Without trade and commerce civilization would soon become a thing of the past. If you can prove that you have, by judicious advertising, by skill and care in raising and packing only the best products, given your "Resurgam Seeds" a widespread reputation, you have in reality created just so much property and the law must protect you in the enjoyment of it.

For instance, if a man comes into your town and starts a weekly newspaper which he calls the *Blower and Tooter*, and by his application to business succeeds in building up a bright local journal the law would not permit me to come into the same town and start another *Blower and Tooter*. An injunction would lie against me if I attempted to do so.

The law would condemn my act as a fraud, and so it should the act of this opposition house which has appropriated your brains and business tact by stealing the word "Resurgam" after you had given it a genuine commercial value.

Yes, we have a national law for the registry of trade marks, and possibly it would have been better under the circumstances for you to register this word. It would have made the way of the transgressor harder. It would have made your position easier. For now you are called upon to prove that you have "created property" in this word. Not always an easy thing to do. If a man can go on for years using a certain trade mark or trade signature, why then it becomes his by universal consent of all mankind, and there is no use asking the law to proclaim to the world the fact that such a word or words are your exclusive property.

Custom and use are the strongest kind of law, and a path worn by the sheep, deepened by the cows and appropriated by human beings becomes a "highway" which no court of justice can block up.

Now, as regards this subject of trade marks and their registry in the patent office at Washington, I must say that people in general have an entirely erroneous idea of them. They are not so easily acquired or so magical in their effect as you may suppose. No doubt you think that if you should be fortunate enough

by hybridizing to create a black tulip that you could instantly register those words "Black Tulip" as your trade mark. Nothing of the kind. The law will not permit you to make use of any purely descriptive words as a trade mark, that is, in the English language. Now, had you called your tulip the "Kalon Melan" (Black Beauty, in Greek) you would have a trade mark which the law would respect.

To give you an idea "what fools these mortals be," a few years ago an enterprising lady wrote a play which she called "Washington" and forthwith she registered her title in the office of the Librarian of Congress at Washington (that is, made it her literary trade mark) and gave notice to the world that she would prosecute everybody who called a play "Washington." Funny, wasn't it? Why, poor George! if people went on copyrighting and trade marking his name for a century it would become unlawful to refer to the father of his country save in the sign language.

Ask yourself what is the design and purpose of a trade mark? A trade mark or trade signature is an arbitrary word or device or both combined to enable the buyer to distinguish your seeds from the seeds of some other house, in other words to protect the public quite as much as you yourself. The world is willing to pay a higher price for superior articles and hence it has a right to know what it is buying. You see the design is twofold, to save you from having your brands imitated by unscrupulous dealers and to secure to the public the genuine article instead of the imitation. It is a very praiseworthy scheme of law, but the right should not be abused as in the case of the woman and her play.

A man by the name of Smith once applied for a trade mark for his "Wringer" and gave the words "Smith's Wringer" with a cut showing a hand wringing a man's nose and the blood running therefrom. It was a very poor trade mark, but of course any other Smith could use the words "Smith's Wringer" with another device. But a very foolish man lately tried to protect the words "milk shake" by means of a trade mark, the law gave him the shake and he deserved it, you must have something arbitrary in your trade mark and not merely descriptive.

Another error people fall into is to suppose that after a patent expires or a copyright runs out you can make either one of them a "perpetuity" by registering the name of the article as a trade mark. It won't work. The instant a patent runs out the article is public property. But the law would stop you from saying that it was still "Boggs' Paper Bag," provided Boggs continued to make the bag. You could make the bag but not trade on Boggs' name.

You ask me whether the patent medicines of the day are patented. Very few of them. They are merely secret remedies and anyone may imitate them if he can get at the secret. For instance, suppose you discover a new kind of compost for flower beds, the best way to protect your product would be to advertise it with some good trade mark. Then no matter how much other houses might imitate it people would find it by the original price, and every dollar you put into advertising would give additional value to your compost, although it might be exactly the same as sold by the opposition house.

Now get the various statutory rights fixed in your mind:

1. There is the patent right which runs for seventeen years and then expires ab-

solutely unless renewed by special act of Congress.

2. The copyright which protects books, photographs and original designs (for instance, a bunch of flowers on your bill heads) for forty-two years.

3. The trade mark which will last as long as the country lasts and longer if a decent government is set up by our successors.

UNCLE BLACKSTONE.

Chicago.

The Florist Club's annual banquet occurs next Saturday evening at Kinsley's. There promises to be a large turnout and a royal good time is assured. Friend Gallagher is now "right in the heart of the city." A relative who was a candidate at the recent election ran 7,000 ahead of his ticket, and as M. F. had charge of his campaign he naturally admires himself as a political campaigner.

For a man who complained that the rules "barred him out" Mr. Bassett carried away a very large pocketful of premiums.

Among those present at the exhibition from a distance were a delegation of thirty-two from Milwaukee, among whom were Mr. and Mrs. C. B. Whitnall, Mrs. Gordon, F. P. Dilger and James Currie, and Messrs. Philip Breitmyer of Detroit, F. Smith of Adrian, Mich., A. C. Brown of Springfield, Ill., M. A. Hunt of Terre Haute, Ind., F. J. King, Ottawa, Ill., Joseph Heul, Jacksonville, Ill., H. O. Hinkley, Rockford, Ill. and a florist from Evansville, Ind., whose name the writer cannot now recall.

Thos. C. Rogers has taken the store at 211, 214 Wabash Ave. He started with a street stand at the corner of Wabash Ave. and Adams St. about six months ago.

How about that gentleman from Hinsdale who didn't see how he could make any exhibit?

Geo. W. Miller is rebuilding his greenhouse and making other repairs at his greenhouses.

The pair of *Latania borbonica* which stood near the mantel decorations at the exhibition were as perfect a pair of palms as were ever seen in this city. Though in only 14-inch pots they had a spread of six feet and from nine to eleven absolutely perfect leaves. Mr. J. T. Anthony, the owner, may well be proud of them. It would be difficult to match them.

During the exhibition a reporter on one of the daily papers, in his enthusiasm over the floral arrangements shown, unwittingly stated that they were in advance of anything before seen in America. Mr. Neal of State street read this note and immediately hid himself to the exhibition, where in his usual quiet and retiring manner he confidentially informed an admiring coterie, in a voice which could not have been heard more than a block away, that with the sole exception of himself a gentleman in Boston was the foremost floral artist in America. And while apparently loath to enlarge upon his own talent, Mr. Neal further picturesquely informed his spell-bound audience that he, himself, to wit: Mr. Neal of State street, could while blindfolded, with his back turned toward a table, then and there, without further premeditation compose, as it were, a dinner table decoration which would cause a blood red blush to obscure from sight anything else in the building. Mr. Neal's former reputation for retiring modesty of disposition and total lack of the attribute technically known as "gall" is now firmly established.

Manny Peiser, who is in charge of George Klehm's store, is duly exuberant

over the number of prizes on floral arrangements taken by the entries made from 74 State street.

The Flower Exchange project is moving. Quite a number of subscriptions to stock have been made and two gentlemen stand ready to subscribe the balance as soon as all have had a chance to subscribe. It is desired that the stock shall be scattered in small blocks, every grower and every dealer to have some, rather than to concentrate it in the hands of a few, and all will be given an opportunity to have at least one or two shares. But those who desire to take stock should make their wishes known at an early date, as it is desired to close the subscription books and perfect the organization of the company as soon as possible. The shares are \$50 each, total capital \$10,000.

Greenz & Harms succeed Frese & Greenz in the cut flower commission business at 89 Wabash Ave.

The recent flower show has had the effect of stimulating interest in the new organization, The Horticultural Society of Chicago. It is expected that the future exhibitions will be given under the auspices of the Horticultural Society.

New York.

Trade very dull.

The great amount of chrysanthemums coming in has made the demand for roses very poor, consequently the prices for roses have dropped way down.

Prices for small lots of selected roses remain about the same, but large quantities can be bought for \$15 or \$20 per 1000.

All the stores now have a fine show of chrysanthemums but they do not sell as well as in former seasons. The fine varieties are selling cheaper and may now be seen in most of the smaller stores.

There was quite a jovial meeting held at the Fifth Avenue Hotel last Friday to decide a wage made by the two great chrysanthemum growers, John H. Taylor and Ernest Asmus, as to which of them produced the six largest chrysanthemum flowers for this season. It was decided in favor of Mr. Taylor although it was conceded that those grown by Mr. Asmus were the most perfect. After the "bottle" was opened the chrysanthemums were placed on exhibition in Bro. Scallen's window and were greatly admired by the passing throng.

The remarkable summer-like weather we are having brings forth an abundance of flowers and there is not enough business to use them all up to advantage.

JOHN YOUNG.

SOME DEALERS in hardy perennials should send out bigger plants. A correspondent complains: "The plants I have received are aggravatingly small, sometimes mere morsels, which I lose in a week or two after planting."

Grounds at Hotel Del Monte, Monterey, Cal.

No matter at what season of the year this delightful place is visited one always finds a wealth of flowers that can not be excelled anywhere.

Chrysanthemums are planted out by the thousand and at the present time a grand display, especially a long border on west side of the hotel, where numerous varieties are planted indiscriminately, presenting a much finer appearance than when planted in long lines of a distinct color.

The mixed borders are gay with numerous varieties of annuals and perennials, and will probably remain so for some time. A large variety of annuals are grown at all seasons of the year and are one of the chief attractions of the grounds. Plants are always in readiness to succeed those past their usefulness.

A curious plant blooming at the present time is *Dahlia imperialis*; it attains a height of 14 to 16 feet and bears a number of lily-like blossoms of a pale lilac color; this variety is a native of Mexico, makes vigorous growth during spring and summer, generally flowering in the month of October. The cool weather and humid atmosphere during the summer months is admirably suited for dahlia culture.

In an angle of the hotel formed by junction of main building and west annex, is a fine sub-tropical border consisting of wiegandias, ricinus, cannas, caladiums, cannabiss, ruellias, bocconias, and towering above all are four giant *Musa Ensete* from 20 to 30 feet high, with a girth at one foot from ground of 7½ feet; one plant is producing seed, which will probably ripen.

Another border that should not be overlooked is the one devoted to the fuchsias; here they are growing in luxuriance, every branch laden with their coral blossoms, standards or tree fuchsias in center of border with pyramidal bushes on each side. The principal varieties grown are Storm King, Phenomenal, Miss Lucy Finnis, Globulus, Graclius, Avalanche, Rose of Castile, Venus de Medici, Tower of London, Wave of Life and Sunray.

The shrubberies are gay with cosmos, which are planted in open places and have a very pleasing effect even at a long distance. It does not signify whether sown early or late they have the same season for flowering.

At the Show.

"What possible beauty can you find in chrysanthemums? To me they are nothing but ill-smelling weeds."

"So I thought when I first saw them. But they grow in your favor. The first symptom is a feeling of wonder at the endless variety of color and form. And after you have become familiar with those within reach you begin to hunger for still different colors and forms, having by this time an abiding faith in the plant to produce any apparently impossible combination."

Diseased Callas.

My callas have been attacked by a disease which induces rot at the neck of the bulb and in a short time the whole plant is rotted off. This is the third year my callas have been affected in this way. Can any reader of the FLORIST tell me what the disease is and how to prevent it?

Answers to Queries.

SWEET PEAS.—"What kinds would you recommend to me to grow?" Pure white, Miss Blanche Ferry (blush), and luscious, scarlet.

ASTERS.—"About what date should I sow aster seed in order to have plants to cut flowers from, from September 15 to October 15?" That depends upon local conditions. I sow in the last week of May and again during the first week of June, and from these sowings get nice September flowers. "When should the plants be transplanted?" As soon as they are large enough, say four inches long, measuring the leaves. "What varieties would you recommend, and whether tall or dwarf?" Tall varieties Zingibell's, Rose-flowered, Victoria and Perfection asters all are good, and the white color in each, most desirable.

TULIPS.—"Would you advise planting my new tulip bed to asters (as the tulips will be in the ground but out of the way) or would the necessary watering to the asters be an injury to the tulip bulbs? The soil is a deep sandy loam perfectly drained, with sand and gravel sub-soil." If for profit, by all means lift and remove the tulip bulbs before you plant out the asters; this is not so much for the good of the tulips as for the benefit of the asters which like a deeply worked well cultivated soil. If the tulips are not quite ripe before you are ready to plant the asters lift them with whatever earth may adhere to them, and heel them in pretty close together in trenches in a slightly shaded place, there to remain till they are ripe enough to lift, dress and store past for use again next fall. W. F.

Mixed up Iceland Poppies (Papaver nudicaule).

A reader who had bought some of these poppies says he got "yellow Iceland poppy (Papaver nudicaule) for white one ordered, and the improved orange scarlet at higher rate, proves no deeper scarlet orange than my own seedlings."

Now, there is something peculiar about the coloring of the flowers of these poppies which is well to know. The typical color is yellow, but there are also white flowered and orange-scarlet flowered forms of it. And when these varieties are grown near to each other they are apt to become cross fertilized to such an extent that we really can not tell beforehand what color of flowers seedlings raised from them may produce. I often have had yellow flowered poppies from seedlings raised from seeds sown from plants bearing white flowers, orange colored ones from yellow parents, etc., and it is a very common occurrence that the flowers may come striped yellow and white, or yellow and orange, after the fashion of blossoms of a four-o'clock. In order to secure flowers true to the kind of the parent, we should grow the different colored Iceland poppies far apart from one another. The general method of propagation is from seed. And I have found that it is a safe plan to replenish the stock from seed every year, although P. nudicaule is a true perennial it blooms the first year from seed, and does well the second year, but after that it is not reliable. Besides the ordinary, there are some large flowered forms of it, notably the Munstead strain. F.

KNOXVILLE, TENN.—We have caught the chrysanthemum fever and arrangements are being hastily made to hold an exhibition on a small scale this month.

ED. AM. FLORIST.—At a meeting of the Gardeners' and Florists' Club, of Boston, held in Horticultural Hall, on November 4, 1890, it was unanimously voted to enter our strongest protest against the merging of the Horticultural Department into the Bureau of Agriculture of the Columbian Exposition.

J. J. CUNNINGHAM, Sec'y.

L. H. FOSTER, Pres.

The Florists' Club of Philadelphia adopted a similar resolution at its meeting held also on the 4th inst.

Hot Water Under Pressure.

In reply to Mr. Meidam's query in last week's *Florist* would say, we have heated our store for three years with hot water, using a copper jacket boiler and about 800 feet of 1-inch pipe. It works like a charm. Our expansion tank is up stairs, fully 22 feet higher than the boiler and we heat the shop up stairs as well as the store. We use 2-inch pipe from the boiler to the first radiator, or a short distance, then only 1-inch for all the heating surface. We think that 1-inch radiating pipes will be found more satisfactory than 2-inch. If we were to re-pipe I think we would use 3/4-inch pipe, but 1-inch is near enough and far better than 2-inch.

Syracuse, N. Y.

A. D. PERRY.

New Decorative Plants.

According to the New York *Mail and Express* of October 28, several new decorative plants are being used by the florists of the metropolis. In the description of a church decoration we find the following paragraph:

The altar of the Church of the Strangers is elaborately decorated with choice palms. The center of the bank is a large rubber plant of the *funeck's alatis* variety. Trimmed up to the center on either side are beautiful palms of the variety *fencous revoluta* and *lantone*. The base of the bank is festooned with ropes of laurels, smilax and chrysanthemum. On the extreme outside from the large rubber plant in the center are grouped choice and beautiful palms of the *recurv* and *centle* variety.

It is to be deeply regretted that the *Mail and Express* reporter did not give a feverishly expectant public an accurate description of these novelties, and especially of the "recurv."

Price, \$2.00.

AMERICAN FLORIST CO., Chicago.

S. A. F. Attention

Our defeated competitor in "Standard" Flower Pot contest at the Boston meeting, for the **Certificate of Highest Merit**, reflects on the members of the Committee of Award as not being impartial in their decision. The members of that Committee were M. A. Hunt, Terre Haute, Ind., Chas. Henderson, of the firm of Peter Henderson & Co., New York, and Wm. K. Harris, Philadelphia, Pa. No fairer or more competent committee could be selected from the members of the S. A. F., and as far as diligent inquiry reveals, their decision meets with the approval of everyone excepting A. H. Hews & Co.

The official programme gave notice that the Certificate would be awarded to the display "which most nearly approaches the 'Standard,' such display shall consist of not less than one dozen of each size, made from working molds and not turned down." The sheet with drawings of the pots (which was gotten up by A. H. Hews & Co., under the instructions of the Committee of S. A. F. and sent to the different potters for their guidance) shows 17 sizes, and the number we exhibited; one dozen of each, as required. In regard to the statement published by A. H. Hews & Co., that "very many" of our pots were **"either ground, filed, turned or sand-papered to size,"** we wish to distinctly say that this is **FALSE**. The pots we exhibited for the Certificate were made exactly as we make them for our customers, and were not altered in any way whatever; in fact it is impossible to alter the inside measurement after a pot is once made; a mold that will make one pot correct will make any number (until the mold wears out) exactly the same. In reference to the absurd "propositions" of Messrs. A. H. Hews & Co., we decline to be a party to the proposed exhibitions as it would be a gross insult to the honorable gentlemen of the committee, who, after giving their time and labor to the society, are at least entitled to common courtesy.

THE WHILLDIN POTTERY CO.,
713 & 715 Wharton St., PHILADELPHIA, PA.

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN**. We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from 1 $\frac{3}{4}$ -inch to 7-inch inclusive, and 250 pots each from 3-inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

HEADQUARTERS for CHRISTMAS TREES!

Wisconsin Blue Spruce.

The finest of all in form and color. Well furnished, selected trees, carefully packed in light, strong crates, containing 25, 50 and 100 trees, delivered, Freight Charges Paid to any point within 300 miles of Chicago, at prices here quoted:

	25	50	100
4 to 6 feet	\$ 3.50	\$ 6.00	\$10.00
6 to 8 feet	6.00	11.00	20.00
8 to 10 feet	10.00	18.00	30.00
10 to 12 feet	15.00	25.00	45.00
12 to 14 feet	20.00	35.00	60.00

The two largest sizes are of Balsam Fir; fine selected specimens.

Special correspondence solicited on car lots.

As the Western Classification of roads now exact, by a recent ruling, ACTUAL PREPAYMENT of all freight charges on Christmas Trees, I am obliged to assume these charges, and also all risks of transportation; hence I am under the necessity of insisting upon the following:

TERMS OF PAYMENT:—At least one-half cash with order; balance 30 days approved credit. All bills to be paid not later than January 1st 1891. No attention will be paid to orders not complying with above terms.

W. D. BOYNTON, SHIOCTON, WISCONSIN.

Gas for Fuel.

I would like to hear from any one who has been using gas for fuel in heating greenhouses. I have an upright steam boiler and am anxious to use gas for fuel. Would like information regarding burners, cost, where to be obtained and probable amount of gas used by each burner per hour.

G. A. KUHLE.

Pekin, Ill.

AMONG the mail received at this office November 5 was a sealed envelope post-marked South Bethlehem, Pa., which was found to be empty when opened. Will our correspondent please forward the intended contents.

PRICE, \$2.00.

AMERICAN FLORIST CO., 54 La Salle St., Chicago.

A. CEFREY'S

Patent Improved Florists'

Immortelle Letter and Pin Fastener.

CEFREY LETTER CO.

GENTLEMEN:—I find the new machine made Immortelle Letters manuelle handled by you very safe and in many respects superior to anything of the kind we have ever handled. Their uniformity of shape, size and color, the convenient form in which they are put up, and the excellent device for fastening them to the work, are among the most commendable points in your letters. Please double my last order and deliver as soon as possible. Yours truly,

W. J. STEWART.

CEFREY LETTER CO., 13 Green St., Boston.

DEAR SIR:—Please ship me five thousand letters as soon as possible. They are the best and most practical letters in the market. The pin fasteners are a long way ahead of the old fashioned way of wiring. Yours truly,

N. F. MCCARTHY.

CEFREY LETTER CO., Boston, Mass.
DEAR SIR:—Send at once ten thousand small letters and five hundred large (two inch.)

GALVIN BROS., Boston.

We wish to announce to all florists that we have removed to much larger quarters, **No. 13 GREEN STREET, BOSTON.** We make our letters by machinery; they are not only more perfect in size, shape and color, but are the best and cheapest in the market. Our 2-inch letters are only two and a half cents, and the 1½-inch letters are only two cents apiece. Your customers will have no others. Be up with the times! Send us your orders and we will ship you a supply for this winter. **They are the best in the market.**

WE HAVE in hand reports of a number of other chrysanthemum shows which were crowded out of this issue through lack of space. They will appear next week. No report had been received from Cincinnati or Buffalo at time of closing for this issue.

IT IS REALLY remarkable the amount of space the daily press all over the country is now giving to the chrysanthemum and the chrysanthemum shows. A large number of the articles printed are quite creditably illustrated with drawings of specimen blooms and plants. Certainly no other flower has such liberal and continuous mention by the daily press.

ΘήγυασηΚεμum Σήνωα.

Philadelphia.

It is a pleasure to be able to note the advancement that is being made in the cultivation of the chrysanthemum. Every year's display since the first exhibition was held in this city—some eight years ago—has been better than the last. Yet we will hear occasionally, when some particularly fine specimen plants or flowers are shown, that the limit has been reached. But so long as onward and upward are the watchwords, progress must be the result. Not only were the exhibits individually better as a rule, but collectively the displays were more effective. Horticultural Hall never presented so beautiful an appearance as it did last evening when its doors were thrown open to the public. The decorations were more elaborate than had ever been attempted before, and they were in exceeding good taste. The committee which had that department in charge, of which Mr. H. C. Gieger of the Floral Exchange was the most active member, deserve great credit.

On entering the hall the best plants, those competing for the highest premiums, met the eye. They occupied the center of the hall. On each side were tables of ferns, palms and other choice decorative plants, and large palms and dracaenas were on pedestals here and there which were an attractive feature, relieving the flatness which usually prevails in chrysanthemum shows if some such efforts are not made.

There were two plants of *Phenocichorium sechellarum* occupying prominent positions, one came from the veteran Wm. Joyce, gardener for Miss Baldwin, the other from Alexander Young, gardener to Postmaster General Wanamaker. An exceedingly large plant of *Latania borbonica* was also noticed, which came from "Wootton," the country home of Mr. Geo. W. Childs. It must have passed at least twelve feet in diameter. Mr. J. M. Hughes, the superintendent, also exhibited a collection of decorative plants.

Beneath the balcony the smaller collections and seedling chrysanthemums were arranged. The seedlings, as a matter of course, attracted a great deal of attention.

Henry H. Surman, gardener for E. W. Clark, Esq., Germantown, had a very distinct variety on exhibition which has been named "Mrs. Louis Childs Madeira." It is the most double variety I have ever seen, and in form almost as round as a ball. When fully developed it will no doubt be quite so, it is bright yellow in color, and although it is said to be a seedling from the Japanese it partakes more of the character of the Chinese. The same exhibitor had also one which was as bright as Cullingfordii, but it was quite distinct in form, the floret petals

being tubular at the base and yellow in color, so that the contrast in coloring was very effective. He had one that was labelled "Shenandoah" similar in color to Pedro Diaz, a variety seldom seen in this part of the country at the present time.

Mr. Thomas H. Spaulding also exhibited some seedlings of decided merit. His John Firth is a very effective variety, silvery pink in color and quite large. Another variety, Mrs. D. D. L. Farson, is a darker shade of pink and whorled in form.

Robert Craig had several seedlings which promise to rival many of the old favorites. One was christened Col. W. B. Smith at the florists' supper. It is bronzy yellow in color and the floret petals are long and drooping.

J. Brydon, Yarmouthport, Mass., had a large yellow seedling named J. Brydon, Jr., broad floret petals inclined to incurve.

Fred R. Sykes, gardener to Mrs. Harry Ingersoll, had a dark pink inclined to purple, named Mrs. Robert C. Ogden. E. A. Wood, West Newton, a pure white Chinese, very double, called Annie M. Weybrecht, and the one that attracted general attention was John Thorpe's the George W. Childs, a beautiful crimson, broad floret petals, very large and showy. Hugh Graham's son had the Frank Tompson, a large pure white, this we believe has been bought by Hill & Co., Richmond, Ind. Many others changed hands during the exhibition, but they have not been made public as yet.

The new carnation American Flag was very much admired; it is the most showy striped carnation in cultivation, a sport from Portland. Lizzie McGowan among Mr. H. E. Chitty's collection of carnations promises to be a popular and profitable variety, in color it is pure white. Edward Swayne, Kennett Square, had a delicate pink sort which is likely to prove valuable, being in that class of pink carnations that is so much called for nowadays.

The first premium for the Grand Prize for the best 12 chrysanthemums, 12 varieties, grown in pots, was awarded to James Verner, gardener to A. J. Drexel, Esq., Runnymede, Del. Co. The sorts were as follows: Miss Mary Wheeler, 6 feet 4 inches across; Grandiflorum, 5 feet 10 inches across; Robt. Crawford, 6 feet 5 inches across; Mrs. A. Blanc, 7 feet across; Robert Bottomly, 6 feet 2 inches across; Cullingfordii 6 feet across; Mrs. Winthrop Sargent, 6 feet across; Puritan, 6 feet 4 inches across; L. B. Bird, 6 feet across; Mrs. Irving Clark, 6 feet across; Frank Wilcox, 6 feet 4 inches across.

These plants were pronounced by experts to be the finest ever seen in this country.

Second premium was awarded to John Shaw, gardener to Col. G. G. Green, Woodbury, N. J. This is Mr. Shaw's

first appearance for three years. His plants were also extra fine examples of skilled cultivation, the foliage was of a fine rich dark green and furnished down to the pots. His twelve varieties were as follows: Mrs. Wm. Bowen, Puritan, Robt. Crawford, Mrs. Langtry, Mary Wheeler, 6 feet 4 inches, Juno, Mrs. E. W. Clark, Grandiflorum, Cullingfordii, John Colquhoun, Wm. H. Lincoln and Twilight.

Third went to George L. Fowler, gardener to Joel J. Bailey, Esq., Synnyside, Ind. Co. The varieties follow: Robert Bottomly, Mary Wheeler, Mrs. Frank Tompison, Bride, President Harrison, Gold, L. Canning, Mrs. Irving Clark, Lillian B. Bird, Mrs. Isaac C. Price, Puritan and Grandiflorum.

The cut flowers were more in number and better in quality than usual. The H. E. Widener which was sent out last year by Hill & Co. has wonderfully improved since it took the "Blanc Prize" as a plant in flower last year.

Hugh Graham's Son had some magnificent blooms, but those which came from E. Asmus, West Hoboken, N. J., were larger. The twelve blooms which were shown on long stems in a vase measured in diameter collectively ten feet eleven and a half inches (10 feet 11½ inches). The flowers were measured from outside to outside, taking the diameter of each flower over the crowns from the extremities when placed on a plane surface. Mr. John Thorpe says: "This is unquestionably the most remarkable measurement of any twelve flowers."

Many of the plants from which these flowers were cut carried from 4 to 7 flowers each; the largest flower measured 11½ inches, the smallest 10¼ inches.

Certificates of merit were awarded to Wm. K. Harris for John Lane, one of his seedlings of last year and distributed by Hill & Co. And for Miss Minnie Wanamaker, another of last year's seedlings, raised by Henry B. Sarman and sent out by H. Waterer. The latter shares the honor with H. E. Widener as being the best two varieties sent out last year. Miss Wanamaker is a large, very double, pure white flower and will certainly make a fine exhibition variety.

John Shaw was awarded a silver medal for a seedling named Mrs. G. G. Green. This is a pure white and being a healthy grower it has proven itself a good exhibition sort, as it was awarded the first premium for the best new variety—plant in bloom.

John Thorpe also received a silver medal for a seedling, since named Henry M. Stanley, I believe. It is lake crimson in color, with silvery reflex.

A collection of seedlings came from I. Forstermann, Newtown, L. I., N. Y., conspicuous among which were Julius Roehrs and Annie May. The latter is a beautiful yellow with dark bronzy center, this it has passed into the hands of Peter Henderson & Co.

Thomas Monahan had some good varieties with which he took premiums, as a glance at the list below will show. Robt. Carey also exhibited half a dozen seedling plants in bloom.

A collection of seedlings was received from H. Tong, manager for W. L. Scott, Esq., Massachusetts Garden and Greenhouses, Erie, Pa., but unfortunately they did not arrive in good condition. The W. L. Scott, Massachusetts, Thora Strong and Mathilde Townsend are promising and seem worthy of a further trial.

A. H. Fewkes, Tewkesbury, Mass., sent Waban, a good shade of pink similar to Robt. Crawford when at its best. Bea-

con, an improved Mrs. Langtry, creamy white in color, it is said to remain longer in perfection than the Langtry. Tremont, chrome yellow, is more than promising. Mrs. W. Baker is a yellow with orange center, quite pretty.

From Mr. Henry A. Gane, West Newton, Mass., an enthusiastic amateur who although over 80 years of age attends to the wants of his pets daily and delights in the healthful exercise, came a few fine seedlings. One is called Gane's Wheeler, a very much improved Mrs. Charles Wheeler, being larger and more decided in color. Needles we are told makes an excellent pot plant, it belongs to the class of narrow twisted floret petals. Another may be described as a white President Hyde. No. 200 is a twisted variety, creamy white, held over for further trial. Nyack is a large purple incurved variety.

I hope to refer to the Philadelphia-raised varieties in a future number of the AM. FLORIST, and to some others that have been unavoidably omitted from this report.

In addition to palms, ferns and other decorative plants there were fine examples of vegetables from Gebhardt Huster and J. M. Hughes, and foreign grapes added to the interest of the exhibition. Below will be found a list of premiums as awarded by the standing committee on awards on Monday evening.

The cut roses were superior to what are usually seen here, especially those from E. Asmus, among which were Mme. Hoste, Mme. Cusin, Perle and Watteville.

The following premiums were awarded:

GROWERS' LIST.

First to H. E. Chitty, Paterson, N. J. for collection of cut carnations; second to J. Bergman, Flatbush, L. I., for American Flag. Third—To J. McGowan, Orange, N. J., for New White, Lizzie McGowan.

Collection of 12 Perle des Jardins—First to E. Asmus; second to Evans & Battles.

12 Niphotos—First to Joseph Hancock; second to Charles S. Price.

12 The Bride—First to John Burton; second to Charles S. Price.

12 W. Francis Bennett—To C. F. Evans.

12 Papa Gontier—First to C. F. Evans; second to Coles & Whitley.

12 Sunset—First to C. F. Evans; second to Ed Lonsdale.

12 Catherine Mermet—First to John Burton; second to Charles S. Price.

12 any other variety—First to Charles S. Price for Madame Hoste; second to E. Asmus for Madame de Watteville.

6 American Beauty—First to John Burton; second to Edwin Lonsdale.

12 Madame Cusin—First to John Burton; second to E. Asmus.

10 Meteor—To C. F. Evans.

A special premium was awarded to Julius Roehrs for a new hybrid perpetual rose.

FLORISTS' LIST.

Collection of Cut Carnations—To Pennock Brothers.

12 Perle des Jardins—First to Heron & Nisbet; second to Evans & Battles.

12 Niphotos—First to Evans & Battles; second to Pennock Bros.

12 W. Francis Bennett—First to Pennock Bros.; second to Evans & Battles.

12 Sunset—First to Evans & Battles; second to Pennock Bros.

12 Catherine Mermet—To Pennock Bros.

12 any other variety—First to Pennock Bros. for Souvenir de Wootton; second to Heron & Nisbet for Duchess of Albany.

6 American Beauty—To Pennock Bros.

12 La France—First to Evans & Battles; second to Heron & Nisbet.

12 Madame Cusin—First to Pennock Bros.; second to Evans & Battles.

OPEN TO ALL.

Collection of Orchids—To C. F. Evans.

FOREIGN GRAPES.

Best six bunches, six varieties—To John H. Bull. Best three bunches, three varieties—First to John H. Bull; second to Thomas C. Hogue. Best two bunches, Black Hamburg—To Thomas C. Hogue. Best two bunches, Muscat—To John H. Bull. Best two bunches of any other variety—First to John H. Bull; second to Thomas C. Hogue. Best one bunch of specimen variety—First to John H. Bull; second to Thomas C. Hogue.

A special premium of \$25 was given to J. Kift & Son for a flower picture, apparently called "The Rivals." One-half of the picture was constructed of roses and the other half of chrysanthemums.

The judges of the chrysanthemums were: John Thorpe, John N. May and James Dean. They had a very difficult and thankless task to perform, but so far as I could learn the awards gave general satisfaction. They commenced at 9 o'clock a. m., and it was about 10 p. m. before they had completed their onerous duty.

The following premiums were awarded: Special mention was given to E. D. Sturtevant, Bordentown, N. J., for specimen flowers of *Aristolochia grandiflora*.

CUT FLOWERS—CHRYSANTHEMUMS.

Open to all—Collection of cut sprays, in vases, one of a kind—First to H. G. Standen, second to Coles & Whitley. Twelve naturally grown sprays, 12 varieties—First to Coles & Whitley; second to E. Metcalf, third to John McCleary.

Fifty blooms, one of a kind—First to William Tricker, second to F. R. Sykes, third to Joseph Hancock. Fifty blooms, 12 varieties—First to William Tricker, second to F. R. Sykes, third to H. G. Standen. 100 blooms, one of a kind—First to William Tricker, second to Joseph Hancock, third to John McCleary. 25 blooms, one of a kind—First to F. R. Sykes, second to Wm. Tricker, third to H. Graham's Son, fourth to Joseph Hancock.

Best vase of yellow—First to Hugh Graham's Son, second to E. Asmus, third to F. R. Sykes. Best vase of white, one variety—First to E. Asmus, second to Hugh Graham's Son. Best vase of pink—To Hugh Graham's Son. Best vase of any other color—To Hugh Graham's Son. Vase of cut blooms—First to Coles & Whitley, second to F. R. Sykes.

NURSERYMEN AND FLORISTS' LIST.

Six pompons, six varieties—First to W. K. Harris, second to H. G. Standen, third to J. W. Colflesh. Specimen plant, white—First to W. K. Harris, second to J. W. Colflesh, third to Coles & Whitley. Specimen plant, any other color—First to W. K. Harris, second to Coles & Whitley, third to J. W. Colflesh. Three specimen plants, three different colors—First to W. K. Harris, second to D. Y. Danenhower, third to Coles & Whitley.

AMATEURS' LIST.

Collection of four different colors—First to James Verner, gardener to A. J. Drexel, second to John Shaw; third to Charles W. Trotter. Specimen plant, white—First to James Verner; second to George L. Fowler, gardener to Joel J. Bailey. Specimen plant, yellow—First to John Shaw; second to Patrick Conlon, gardener for Percival Roberts, Jr.; third to John McCleary, gardener for William Weightman.

AT THE BOSTON SHOW

Specimen plant, any other color—First to James Verner, second to John Shaw, third to Patrick Conlon. Best seedling plant—First to John McCleary, second to Henry B. Surman.

OPEN TO ALL.

Collection of 12 plants, 12 varieties—First to James Verner, second to John Shaw, third to George L. Fowler. Best collection of six new varieties not before exhibited at any show of the Pennsylvania Horticultural Society—First to W.

to John Shaw, second to W. K. Harris, third to Charles W. Trotter. Best specimen plant, new—First to John Shaw, second to W. K. Harris, third to Charles W. Trotter.

6 Standards, stems not less than three feet and not more than five feet high, six varieties—First to John McCleary, second to Patrick Conlon. Specimen standard—First to P. Conlon, second to Coles & Whitely.

25 plants, 25 varieties, any number of

K. Harris, Robert Craig, equal; second, Henry B. Surman, third, R. G. Carey.

Best specimen plant, same conditions—First

blooms in not over six-inch pots—First to W. K. Harris, second to Gebhard Huster. 25 plants in not over six-inch pots, one bloom on each plant, 25 varieties—To W. K. Harris.

12 specimens, six varieties, in ten-inch pots—To J. W. Colflesh. 6 specimens, 6 varieties—First to W. K. Harris, second to Gebhard Huster.

The Sailer Prize, for the best pink seedling—To W. K. Harris.

Wootton Prize, offered by Mrs. George W. Childs, for 3 varieties, 3 different colors—First to John Shaw, second to James Verner.

Pembroke Prize, offered by Mrs. Chas. Wheeler, for four varieties, Japanese—To James Verner.

Record Prize, offered by William M. Singler, for six naturally grown plants—To Gebhard Huster.

Sunnyside Prize, offered by Mrs. Joel J. Bailly, four white, any variety—To John Shaw.

Kunymede Prize, offered by Mrs. A. J. Drexel, for three plants, yellow, any variety—First to James Verner, second to H. G. Standen.

Clothier Prize, offered by Isaac H. Clothier, for best three plants, three varieties, introduced to commerce during 1890—To W. K. Harris.

Wentworth Prize, offered by Dr. Edward Williams, for four plants, one of a kind—First to James Verner, second to John Shaw.

Blanc Prize, offered by A. Blanc, for best seedling never before shown—To Chas. W. Trotter.

Hart Prize, offered by Mrs. H. C. Hart, for best six plants to be grown out of doors—To E. A. Schneider.

Wohlruh Prize, offered by Charles Dissell, for best plant of Mrs. Charles Dissell—To Wm. K. Harris.

Sugar Loaf Prize, offered by Charles W. Trotter, for best plant of President Harrison—To James Verner.

Burpee Prize, for best plant of Mrs. A. C. Burpee and six blooms of same variety—To W. K. Harris.

The Whilldin Pottery Prize, offered by the Whilldin Pottery Company for best seedling plant never before shown—First to Thomas Monahan.

DESIGNS OF CUT FLOWERS.

Plateau of Chrysanthemums—First to Pennock Bros., second to John Mertz, third to Hugh Graham's Son. Flower picture, "The Rivals"—To J. Kift & Son. Dinner Table Decorations—First to Pennock Bros., second to Hugh Graham's Son. Vase of 50 Cut Blooms—First to Coles & Whitley, second to Fred R. Sykes. Schaffer Prize, offered by Miss Elizabeth Schaffer for 25 varieties cut blooms, any variety—To Joseph Hancock. Luzon Prize, offered by Hon. Edwin H. Fittler for 60 blooms, 5 varieties, 12 of each kind, long stems—First to Hugh Graham's Son, second to H. G. Standen.

OPEN TO ALL.

25 Ornamental foliage plants—First to Thomas Long, gardener to A. J. Drexel; second to William Joyce, gardener to Mrs. Baldwin. 15 Decorative plants—To William Joyce.

Specimen plant, any variety—To Alexander Young, gardener to John Wanamaker. Specimen Croton—First to Thos. Long; second to Thomas Wain, gardener to Clarence Clark.

25 Palms—To Thomas Long. Specimen Palm—First to William Joyce, second to Alexander Young. 25 Ferns—To Robert Wark. Collection of lycopodiums and selaginellas—To William Joyce. Marantas—To William Joyce. Specimen Maranta—First to Robert Wark, second to William Joyce. 6 Dracaenas—To Thos. Long. Specimen Dracaena—First to Alexander Young, second to William Joyce.

MEDALS AND CERTIFICATES.

The silver medals were awarded for seedling chrysanthemums to John Shaw for the Mrs. G. G. Green. To J. Brydon for the J. Brydon, Jr. To Fred R. Sykes for the Mrs. Robert C. Ogden. To Henry Surman for No. 178. To John Thorpe for the Geo. W. Childs and the Henry M. Stanley. To Thomas Spaulding for the John Firth. To E. A. Wood, West Newton, Mass., for the Anna M. Weybrecht. Certificates of merit were given to J. Brydon for the Chandos. To Thos. Spaulding for the Frances A. Spaulding. To

I. Forsterman for the Annie May and the Julius Roehrs. To W. K. Harris for the John Lanc. To Robert Craig for Nos. 306 and 307.

Special premiums for foliage plants were awarded as follows: To John M. Hughes, gardener to Mr. George W. Childs, for foliage plants. For a table of foliage plants and ferns—To Charles D. Ball. For the same—To Henry A. Dreer.

Special mentions were made to H. Tong, gardener to W. L. Scott, for a collection of seedling chrysanthemums. To Edwin Lonsdale for a number of seedling carnations. To John Gardiner & Co. and Henry A. Dreer for displays of bulbs. To Whilldin & Co. for a display of standard flower pots. To W. K. Harris for a plant stand.

A beautiful display of orchids in flower was made by the Evans' Rowlandville Nurseries. The arrangement was in good taste and called forth much praise.

The new rose, Waban, from E. M. Wood & Co., Boston, attracted much attention. It is a sport from Catherine Mermet, with which variety it is identical except in color, which is darker. It is to be hoped that it will forever do away with pale-colored Mermets, when it becomes generally in cultivation.

THE CHRYSANTHEMUM SUPPER.

The annual chrysanthemum supper took place on Tuesday evening in the lower hall, which, by the by, was well filled with various classes of chrysanthemums as an overflow exhibition. There were a number of visitors present, including the President of the S. A. F., Mr. M. H. Norton; Secretary Wm. J. Stewart; H. L. Foster, President of the Boston Gardeners' and Florists' Club; Ex-President, P. C. Calder; Alex. Burns, President, New York Florists' Club; E. A. Wood, David Allan, Frank Becker and T. Rowland, of Boston; C. W. Hoitt, Nashua, N. H.; James Brydon, Yarmouthport, Mass.; James A. Penman, Charles Weathered and P. O'Mara, New York; Edgar Sanders, Chicago, and many others whose names I cannot at this time recall. I may have a few "Exhibition Echos" for a future number.

EDWIN LONSDALE.

Boston.

The annual chrysanthemum show of the Massachusetts Horticultural Society opened on Tuesday, November 10, continuing for four days. The weather for the first two days was anything but encouraging. The opening day was marked by the first snow fall of the season, which quickly developed into a cold, uncomfortable rain. Notwithstanding these unfavorable conditions the attendance was very good, and during the last two days the halls were densely crowded with visitors, particularly in the vicinity of the tables where the specially large blooms were displayed.

The lower hall was devoted mainly to cut flowers and the upper to plants. The stage in the upper hall was occupied by a very fine display of palms and decorative plants with a quantity of cut chrysanthemum blooms in the foreground, from W. E. Doyle, and that in the lower hall was filled by Galvin Bros. with a magnificent display of long-stemmed chrysanthemums in vases, also backed by a fine bank of foliage plants.

The leading prize to be competed for in the cut-flower department was that known as the "Bradlee Plate," offered for the best 50 blooms. Another Bradlee premium was also offered for fifty blooms, but divided into 30 Japanese, 10 Chinese and 10 Anemones. All the blooms shown

in competition for these prizes were grand. The former was won by S. J. Coleman, and the latter by J. H. White.

In Mr. Coleman's collection the most noticeable specimens were Etoile de Lyon, Robert Bottomly, Lillian B. Bird, L. Cammings, Mrs. Irving Clark and Advance. In Mr. White's set the best were Jeanne d'Arc, Mons. Lemoine, and a beautiful unnamed white seedling. In Mr. Wm. Edgar's collection were superb blooms of Mrs. Irving Clark, W. H. Lincoln, Bride, Kioto, White Venus, and Princess Beatrice. In A. H. Fewkes's collection in the same class, one of the handsomest flowers was Waban, a variety which received the prize as second best seedling last year, and was awarded a certificate of merit at Philadelphia this year.

First prize for 12 Japanese was awarded to J. H. White, second to E. A. Wood. In Mr. White's set the best blooms were Gold and Mrs. Frank Thompson. Mr. Wood's best specimen was Elegans, an 1889 seedling of Mr. H. A. Gane's which has never been shown before. Mr. Wood also received first for six Japanese, and for twelve Chinese. Specially noticeable in Mr. Wood's collection were Harry Widener, Shasta, Ada Spaulding, President Arthur, Carrie Denny, and Anna M. Weybrecht. The latter is the seedling Chinese which was awarded a silver medal at Philadelphia this season. Mr. A. T. Lombard took second for twelve Chinese, with a good even set.

First on six Chinese was awarded to J. H. White. The varieties shown were M. Lemoine, J. Deleaux, Virgine, Jardins des Plantes, Petro Diaz and White Venus. Second in this class was awarded to the Bussey Institute. The two best specimens in this set were Lady Slade and Empress of India.

For general display of cut blooms, all classes, filling fifty bottles, the first premium was awarded to Mrs. F. B. Hayes. The arrangement of the colors in this display was particularly good.

Much of the interest, especially among the growers, centered in the seedlings. Of these there was an unusual number.

Many were, of course, but more or less perfect reproductions of existing varieties, but there was a fair sprinkling of decidedly new and meritorious kinds. The Society's silver medal for the best seedling was awarded to A. H. Fewkes for "Beacon," which may be best described as an improved Langtry, being much fuller than that variety, and in color a creamy white.

The seedling receiving second prize was shown by S. J. Coleman. It is a very large flower of the Wheeler type, but differing from the Wheeler in the disposition of the outer petals, which extend out flat instead of incurving. It has been named "P. Welch."

Third prize on seedlings was awarded to J. H. White for "Mrs. J. H. White," a very large full white flower finely striped and shaded with delicate violet pink. Quite a number of seedlings were shown by A. Brandt, among them being three or four good ones.

Other interesting seedlings were five from Walter Hunnewell, including one handsome dark bronze incurved, two from T. H. Spaulding, one of which, "D. D. L. Farson," was awarded a certificate of merit, and an immense full flower of the Wheeler type, having broad petals and the center well covered, named "Nyack," from H. A. Gane. This latter was awarded the Appleton medal. In Mr. Gane's set was also a very handsome pink variety, unnamed.

The exhibit on the stage, by Galvin

AT THE BOSTON SHOW.

Bros., was the most notable one in the hall. Here were twenty immense vases of unequalled blooms, each vase holding from fifteen to twenty of a variety, all on long stems with rich heavy foliage. This display was an exhibition in itself, and its equal has never been staged in this country. It is to be regretted that the exhibitors should have made the grave mistake of labelling incorrectly two of the varieties shown, viz: L. Canning and Mrs. Fottler, which were placarded as Mrs. Thos. Mack and Mrs. Gilbert E. Thornton respectively. The flower committee's action in removing the misleading names will receive the hearty approval of all chrysanthemum lovers. The grower of this collection, Mr. S. J. Coleman, was awarded a silver medal for superior culti-

vation, and the medal was well merited. The varieties represented included Mrs. H. Cannel, Mrs. C. H. Wheeler, Lilian B. Bird, W. H. Lincoln, Ada Spaulding, L. Canning, Mrs. Frank Thompson, Mrs. Fottler, Llewellyn, Violet Rose, Neesima, Domination, Mrs. Alpheus Hardy, and W. W. Coles.

Geo. M. Anderson made quite a display of long stemmed flowers in vases, as did also Mrs. F. B. Hayes. Some very fine specimens of Louis Boelmer were staged by Peter Henderson & Co. The whole exhibition of cut flowers, individually and collectively, was far in advance of any seen heretofore in Boston. It exceeded the expectations of all, and is believed by the Boston growers to be the best ever given in America.

The plant department was not quite so satisfactory. There has been but little advance in the quality of the plants grown here for exhibition for some years,

and the interest in them seems to lag. Doubtless this is owing in a measure to the demands made on the growers' time and attention by the present craze for enormous blooms and novel varieties, and also to the comparatively small amounts offered as premiums for plants, for there is no denying that the patience, time and skill necessary to grow good specimen plants, together with the heavy expense of transportation, are away out of proportion to the possible results.

As a rule the plants shown here were to be commended for their graceful appearance, their abundant foliage, and the artistic grouping. There was one specimen, however, which was peerless. It was a magnificent plant of Mrs. Alpheus Hardy, five feet high, and about five feet through, very symmetrical and splendidly furnished with perfect blooms. This was grown by T. D. Hatfield, and he received a silver medal for superior culture.

Walter Hunnewell received first prize for twenty plants. One of these, "Mar-

vel," was a most beautiful specimen of this charming variety. Second prize in this class was awarded to N. T. Kidder. Both of these exhibits deserve commendation for the care with which the staking had been done, the stakes being kept well below the flowers, and nicely hidden by the foliage. The plants in W. H. Elliott's collection were all tiny little dwarf-growing specimens, not over two feet high, and particularly desirable for retail trade. Dr. Wakeott won first prize for specimen pompon with a well proportioned plant of an unnamed seedling. The collection shown by Mrs. F. B. Hayes included some very shapely plants, and the arrangement of the colors was excellent.

In addition to the chrysanthemum exhibits there were five cases of roses shown by Norton Bros. and E. M. Wood & Co. The latter exhibitor showed a vase of the new red *Mermet* "Waban," and to this was awarded a silver medal.

A seedling *calanthe* from Richard Gardner was highly commended, as was also an unusually well flowered plant of *Stanhopea Wardii* from E. A. Butler. The *calanthe* received a silver medal.

A very creditable collection of seedling carnations grown by L. Wight was shown by Galvin Bros. Among the best were Diana, white, Helen Galvin and Fanchon, both closely resembling Grace Wilder, Hesper, yellow, and Bettina, dark red. Besides these there were 18 unnamed varieties, all promising.

A certificate was awarded to carnation "Lizzie McGowan," shown by John McGowan, and honorable mention to "Louise Porsch," from the same grower. L. Wight's "Helen Galvin" also received honorable mention. G. Bernhardt showed a vase of striped carnations "American Flag." WM. J. STEWART.

Indianapolis.

The fourth show of the State Florists' of Indiana was auspiciously opened by Mayor Sullivan of Indianapolis, who talked entertainingly for a few minutes and bid us welcome to the city. M. A. Hunt, president of the society, responded very fittingly for the florists.

The artistic embellishment of the hall was on a scale never before attempted and our worthy secretary, Wm. Bertermann, scores quite a triumph over former years; for to him belongs much of the credit for the work in this line. A brief description might not be amiss. A large canopy of vari-colored silken bunting formed the central piece, from which strands of holly and Florida moss were pendent to the sides of the hall. The balconies and sides of the hall were tastefully trimmed; the background of the covering, white muslin edged with old gold shading at the bottom and for the top line of heavy wreathing of lycopodium, Spanish moss and holly, at intervals bright Japanese fans and parti-colored banners were tastefully draped and hung. The stately emblem of the Republic and flags of other nations with thousands of yards of wreathing tastefully displayed together with the banking of large masses of palms, ficus and other decorative plants made a fit setting for the Queen of Autumn.

The decorations were unusually fine last year thought Mr. Thorpe and our eastern visitors, but they are quite distinct by the present effort in this line.

Chrysanthemum plants were not so numerous as on former years, the growers preferring to concentrate their efforts to the production of fine cut blooms, and

in this feature a grand success was scored. The quantity as well as the quality of the flowers was a gratifying surprise.

In the race for best 25 varieties, 6 blooms of a kind, Mr. Fred Dörner was first with splendid flowers of Emily Dörner, John T. Emlen, Mrs. Wm. Bowen, Mrs. W. S. Sargeant, L. B. Bird, L. Canine, Violet Rose, Mrs. Burpee, Mary Wheeler, W. H. Lincoln, G. F. Moeman, Mrs. Fottler, Henry Cannell, Puritan, Excellent, Mrs. Carnegie, fine, H. E. Widener, Mrs. Langtry, George Pratt, Mrs. Morton, Sunnyside, Marvel and Mrs. I. C. Price. M. A. Hunt was second with excellent flowers of Kioto, Mrs. Fottler, George Maclure, Lucrece, Marvel, L. B. Bird, Magnet, W. H. Lincoln, W. L. Coles, Mrs. Burpee. Henry E. Riemann was third with blooms only a point or so below the two above him. He staged fine examples of Mrs. Morton, Alpheus Hardy, I. C. Price, Mary Wheeler, Coronet, Minnie Wanamaker, J. T. Emlen, H. E. Widener and others.

In the entry for 100 cut blooms, three of a kind, Henry Riemann was first with a fine lot of flowers. This collection was specially noteworthy on account of the size and finish of Violet Rose, which was 8 inches across and 4½ deep. Mrs. S. M. Thomas, quite as broad and much the finest flowers of this sort ever seen at Indianapolis; Walter Coles and Mrs. Levi P. Morton were of the finest, not quite so large as the four mentioned, but of exquisite form and finish were H. E. Widener, J. T. Emlen, Minnie Wanamaker, Ada Spaulding and E. G. Hill.

Best 5 yellows, Riemann 1st, Bertermann Bros. 2nd; best 5 white, 5 bronze, 5 pink, 5 lavender and 5 specimen standard, Riemann 1st in all these classes, Bertermann 2nd.

Best 12 plants in 6-inch pots, 6 blooms to a plant, Bertermann 1st, Riemann 2nd. These were nicely done and represented the popular sorts to decided advantage.

The rose display was generally conceded to be superior to that of last year, which was counted a grand exhibit. Hunt was first with *Mermet*, Gontier, A. Albany, Bride, Perle, Hose and Niphotos; Brown & Canfield, Springfield, Ill., were first on *La France*, Bennetts and Duchess of Albany. Other fine exhibits were by Oakwood Rose Gardens, Oil City, Pa., who staged, not for competition, excellent clusters of *Am. Beauty*, *Bride*, *Albany*, *Wootton*, *Mermet*, *Perle*, *Niphotos* and *Bennet*.

Fifteen cut blooms of a new hybrid perpetual rose, nearly as large and of similar color as *American Beauty*, were shown by Julius Roehrer, of New York. It is probably the earliest of all the foregoing hybrids.

Waban, the "Red *Mermet*," shown by Mr. John N. May, of New Jersey, while a little off in color owing to long confinement, satisfied those who examined it that under favorable conditions it would be as distinct from its parent in coloring as *Albany* is from *La France*.

Hill & Co. were first with a large collection of cut carnations. Among the varieties of note were *Buttercup*, Mrs. Fisher, Fred Dörner, H. E. Chitty, Hoosier, Mrs. Harrison, Indiana and Tecumseh. These latter six are the new seedlings raised by Mr. Dörner, of Lafayette, Ind., and which will be heard from later.

A splendid collection comprising *Tidal Wave*, L. L. Lamborn, *Lizzie McGowan*, Grace Wilder and *Livier Spray* were exhibited by Mr. H. E. Chitty, of Paterson, New Jersey. A fine white seedling carnation named *Ohio* was exhibited by E. J. Paddock, of Cleveland, Ohio.

Begonias were nicely shown by Mrs. Charles Riemann, who had a collection of 100 pots in great variety. Among the finer varieties may be mentioned *mauveata aurea*, Louis Erdody, *Olbia*, *gigantia rosea*, *argentea guttata*, *President Bonnelle*, *Comte Ferd de Lessops*, *Gl. de Seaux*, *Ingramii*, *metallica* and others.

A fine collection of orchids was furnished the society by Siebrecht & Wadley, who sent a fine lot of fancy *caladium* leaves beautifully colored for garnishing the orchids. It might be mentioned that the two harmonized nicely and were very effective.

The great feature of the show was the contest in the seedling classes. The premiums offered tended to bring together the most extensive exhibit of new chrysanthemums ever shown at one time in America. The contestants for the \$100 premium were John Thorpe with five entries, Fred Dörner with six entries, Thos. Spaulding with five entries, Hill & Co. with six entries; and Nathan Smith & Son with three entries.

It was for four blooms of any one seedling not disseminated. Mr. Dörner came out victorious, with the variety *Mistletoe*.

Mistletoe is of the Count de Germiny type, but differing greatly in color. It is of a deep silver color, finely incurving, and a most novel and unique flower both in shape, form and color.

The contest for the prize of \$100 for best six varieties resulted in Hill & Co. receiving the award for the following sorts: *Sugar Loaf*, a large, bold, handsome bronze yellow flower of fine build and finish.

Robert George, a canary-colored yellow. Very bright and effective. Flowers eight inches in diameter.

Willis Rudd, a crimson Japanese sort with whorled petals. Very large and quite distinct with broad petals.

R. Maitre, rich silver pink. Long silken petals. Very fine in texture. Of good size.

Gallia, deep, dark pink with a lighter shading. Large, compact balls of flowers six inches in diameter. Good stiff stems. Flowers full to the center.

Superba, rich, lovely pink, with yellow center. A full, incurving variety forming round, medium-sized flowers.

Certificates of merit were awarded to Hill & Co. for *Flora Hill*, a large, incurving, pure white variety of perfect form and finish, center full; does not show among whites; what Widener is among yellows. Not having requisite number this could not be entered for first prize.

Frank Thomson, a strong, growing, large, bold flower of splendid form and texture. Silver pink, shading to pure white. Certificate of merit.

To Siebrecht & Wadley for Mrs. A. Rogers, a magnificent golden yellow ranking with *Lincoln* and *Widener*. The pure, brilliant yellow, together with its fine form, puts this in the front rank. Certificate of merit.

To John Hartje, Indianapolis, certificate for *Alert*, a large, bold flower, intermediate between *Moseman* and C. H. Wheel.

T. H. Spaulding, Orange, N. J., Mrs. Farson. This has been described before in the columns of the *FLORIST*, and is deserving of all that has been said of it. Certificate of merit.

John C. Firth, an incurving ball of pink, in color a lighter pink than *Ada Spaulding*.

Lily Bates, an improvement over Waterer's "Reward" of last year, but in the same line of color. Certificate of merit.

Charles Henderson, a large, full, bronze colored yellow of fine, bold form. Certificate of merit.

Thorpe's new ones each received certificates. They were:

E. A. Wood, a magnificent fine full double flower, in the Mrs. Wheeler type. A fine advance in this line and a flower of unusual promise.

Wootton, a fine, bold, full flower of an exquisite tint of white, will be magnificent for cutting.

Anna T. Sprague. This showed up much the finest of Mr. Thorpe's new ones and was a formidable rival for first honors. It is a flower that keeps well, and is a pleasing shade of pink with a pearl like gloss. A good sort.

From Fred Dörner. Lafayette Ind.: Mermaid, a soft mellow pink with deeper shading on the outer edge; a fine incurving globular flower. Very bold and effective. Certificated.

Innocence, a chaste and beautiful white; the white being of a purity not approached in other white varieties. Incurved and of fair size and form. Certificated.

Eveline Stein. In the way of, but a great improvement on Bride; delicate white, with petals like the variety called Elksborn. Certificated.

Eda Prass. A fine, bold, recurring flower of great substance and depth; white delicately shaded blush; a pleasing flower of great promise. Certificated.

Emma Dörner. A fine deep violet pink, in the way of Violet Rose when finely done, but of a much deeper and purer color. Large ball shaped flowers of splendid substance. Certificated.

Mattie Bruce. Silvery pink in color, of medium size. Certificate.

Anna Dörner. A full, fine, bold flower with outer petals striped and shaded deep carmine. Center a rich cream white. Certificate of merit.

It might be mentioned that Mr. Dörner's above six made a close race for best six in the \$100 prize.

Thos. Spaulding won the silver cup with the variety named Miss Mattie Stewart, a large yellow flower, of fair size and good form.

Three seedlings (not named) from Hill & Co., were given honorable mention. No. 1, a straw yellow, shaded red; No. 2, in the way of Carnegie, but with broader petals; No. 3, a fluffy or tufted flower with rich cream center. These will be given another year's trial before dissemination.

There were perhaps fifty other fairly good seedlings exhibited. Many of them would have been counted sterling novelties a few years back, but they will have to drop out in the onward march.

NOTES.

Louis Boehmer was shown in fine form by Peter Henderson & Co., and attracted universal attention.

"Oeta," exhibited by Nathan Smith & Co. of Adrian, Mich., Flora McDonald, sent out last year by this firm, and Yarusza, are all promising varieties of the Chinese type and worthy of trial.

Mr. Thorpe's seedling Achievement, a seedling of Mrs. A. Hardy, arrived in bad condition, but it is thought to be a step forward in this particular type.

Unusual interest was taken in the awards on seedlings by the florists present, and the note book and pencil were in almost constant use.

The show every way was a most gratifying success, and we doubt if there is a city in the Union that responds more liberally to the support of a chrysanthemum show than do the people of Indianapolis.

The Florist Club that succeeds in enlisting the people and causing them to attend and support flower shows must have as their ally and friend the newspapers of the city where the show is held. The members of the Society of Indiana Florists are debtors in an unusual degree to the press of the city of Indianapolis for their hearty support and earnest good will as evinced by the many columns of news pertaining to the show, without which it could not have succeeded. Thanks are due the *News*, *Journal*, *Sentinel* and other papers for courtesies shown.

The society here are few in numbers as compared to other localities, and the burden falls heavily on a few of the members. The work should have the earnest, hearty co-operation of all, instead of opposition and hostile criticism from some in our ranks.

Mr. John Lane acted as judge, and gave universal satisfaction. E. G. H.

Baltimore.

This is the last day of the chrysanthemum show of the Florists' Club, and the unanimous opinion of exhibitors and visitors is that, by far, it surpasses any previous show ever held in the city in the brilliant display made by the hall as a whole, in the number of exhibitors, in the closeness of the contest for premiums, and in the exceedingly high culture shown by every collection staged. It is the first exhibition held by the Florists' Club, that of one year ago and all previous ones having been held by the Maryland Horticultural Society, an association composed principally of wealthy amateurs, and as it is the first, the gentlemen who have had the affair in charge deserve, and have received, the highest praise for so brilliant a success that in the language of a visitor, "It is better than that which I saw in London."

The attendance was all that the most sanguine member of the club had dared to prophesy, the number of visitors on Thursday being 2,200, among whom were Mrs. President Harrison and Mayor Davidson and family, with all the leading society people of the city. Mrs. Harrison took the fraternity quite by surprise and had paid for herself and company and had entered the hall, in fact, started on a tour of observation, before being recognized; after that she was escorted by the president of the club and two of the principal exhibitors, who called her delighted attention to the best things on the floor, and were in turn delighted at her expressions of surprise and gratification, as some giant chrysanthemum or beautiful orchid blossom was presented to her for inspection.

The whole of Monday was employed by members of the club in transforming the immense hall of the Oratorio Building into a bower of evergreen branches and trees, with a network of festoons reaching from far overhead to the top of the galleries and all along the front and bottom of the gallery railing. Even the vestibule was lined with palms, ferns and evergreens. The scene from the entrance gallery with the electric lights burning at night was very fine, the massing of palms here and there in great groups between the masses of color which represented the chrysanthemums in a bird's eye view, being particularly good and pleasing, as the crowded condition of this part of the building testified at any hour of the evening.

On entering the hall the first exhibit on the left was the prize winning group of 10 Japanese, containing Mrs. Langtry,

Carroll Elliott, Excellent, Beauty of Yeldo, Mons. Boyer, Harry Wagner, Jno. Laing, Puritan, E. Molyneux and Violet Rose in most remarkably well grown specimens, averaging at least four feet in height and diameter. The only improvement possible in the plants composing this group, if a suggestion from a non-grower of the plant be permitted, would be to disbud a little more freely; 200 blooms being carried at a considerable sacrifice in size, and some of the plants had that many by actual count.

Next to this lot was the first premium 10 Chinese, owned by the same grower, Mr. Jno. Donn, and right here it is hoped another suggestion will be permitted, to the members of the club this time, it is that plants be grouped by entry class, and not by ownership, for where competition is as close as it was at this show the present method renders the work of the judges extremely difficult and gives greater opportunity for complaint if the award is not in accordance with every one's ideas. The 10 Chinese, Snowball, Joan d'Arc, Mrs. N. Davis, Ada Spaulding, Cullingfordii, Boule de Nègre, Alaska, Tragedie, Brazen Shield and Virginalis, were as well grown as the Japanese, which is giving them high praise.

On the opposite side of the entrance was the orchid exhibit of Messrs. Brackenridge & Co. In this class there was no competition, the firm having offered a special premium for the class declined to enter for competition, and there was no other entry.

Next to them came the exhibit of Mr. Wm. Fraser who got first on 6 Japanese, Mrs. A. Hardy, Mrs. Langtry, L. Canning, Mrs. C. H. Wheeler, Puritan, Mrs. Isaac C. Price. These did not carry such a number of blooms, but L. Canning averaged 6 inches in diameter, and Mrs. Langtry 8 inches. The plants were splendidly grown and carried foliage to the very soil in the pots. This may be said of the next lot which took first for 24 distinct varieties by the same grower, with equal truth, for all were in the very best condition. Among these were particularly fine Mrs. M. Bonny, E. W. Clark, Mrs. C. H. Wheeler, W. W. Howell, Sunnyside, G. B. Wilson, Mrs. Alpheus Hardy, Majenta, W. W. Coles, Mrs. Robt. Bottomly, Little Tycoon, Moonlight, Mabel Douglas, E. W. Clark, Sunnyside, Veddo, Diana, Cullingfordii, and a remarkably well preserved specimen of Gloriosum at this late date.

Further on was the anemone flowered class, in which the first premium was taken by Mr. Donn with a grand plant of Model of Perfection, and three seedlings of his own Maude Lee, a pure white five inches in diameter with incurved petals, Marion Kerr, petals rich majenta with light yellow back, and Susie McFarland, a large pink. Then the best specimen of any kind, a class which was placed in one large group, and which in the humble opinion of "yours truly" tripped up the judges badly, for they awarded first to a plant of Mrs. Alpheus Hardy, while a superb plant of Mrs. Wm. Bowen which presented one mass 4 feet across of huge flowers got second; to be sure it might have been staked out a great deal wider and it might have been disbudded to some extent with advantage, but it was a beauty and attracted the wondering admiration of every amateur at the show as it was.

The number of Maryland grown seedlings exhibited was a great surprise, no less than 24 varieties, all of good form, were staged. The first prize was awarded to Mr. E. A. Seidewitz for a fine incurved

flower, amaranth with silver reflex, called My Maryland. The same gentleman exhibited Adele, white anemone; Immortality, white; Ancient City, delicate pink; Lord Baltimore, large incurved terra cotta with silver reflex; also a set called the Press set: Sun, canary; Herald, flesh pink; American, lilac rose; World, delicate buff; News, shell pink; Correspondence, orange buff; Journal, yellow, striped red; all showing Japanese blood.

There were very creditable displays of carnations, begonias, coleus and cacti, one seedling carnation shown by Mr. Hy. Bauer being four inches in diameter.

Vegetables were only represented by one collection, a small lot of big things in the way of beets, radish, etc.; and of fruits the show could boast but one entry, a bunch of Japanese persimmons.

But the cut flower and immortal work was grand, not only as to size, though one design of immortelles, a cross of Cape flowers, with a purple immortelle anchor chained to it, was at least seven feet in length, but with regard to taste and originality the exhibits were immeasurably superior to any group of similar character ever shown in this city. A very beautiful design was a picture on an easel, the frame three feet square being formed of Source d'Or chrysanthemums, and on wire gauze stretched on it was worked up a vase of Tokio filled with sprays of rare varieties. Other designs of merit were a table design by Halliday Bros., which took first, a fisherman's basket of Wootton roses by Campbell & Bankert, and an anchor of Perles and La France with violet flukes. Many of merit we are unable for want of space to mention specially.

The judges were Messrs. Wm. K. Smith, C. F. Hale and Wm. Clark, who came over with a delegation of the Washington Club, and made the awards in a manner that gave great satisfaction, and if they had not had to practice foot racing up and down the hall and across to get at different entries in the same classes we might have hoped to see them in the same capacity next year. They got up a good appetite by dint of long continued and violent exercise however, and after the awards were made accompanied the floor committee to a neighboring hotel, where ample opportunity was given to display their powers of disposing of exhibits of oysters and cases of liquid nourishment, as well as indulging in the pleasant interchange of complimentary remarks which such diet provokes.

As a final to the whole let me give the question passed around at that jolly banquet, "What will Seidewitz's next seedling be?"

First prizes were awarded to John Donn for 10 Japanese, 6 ditto, 10 Chinese, 6 ditto, specimen ditto, 4 anemone, 6 ditto, 12 specimens in 12 distinct classes and cut sprays; to Henry Bauer for specimen Japanese, specimen Mrs. A. Hardy, 6 carnations, specimen carnation, 12 foliage begonias and 6 ditto; to Wm. Fraser for 24 specimens in 24 distinct varieties; to A. Seidewitz for specimen Maryland grown seedling, 12 specimen ferns and original floral design; to Hugo Walther for 12 geraniums; to M. A. Hantseke for 12 specimen carnations in 6 varieties; to John Cook for 12 palms, dracaenas, 6 ferns, display cut roses and new roses; to John Berl for 12 begonias and display of vegetables; to C. T. Bucher for specimen palm, corsage bouquet and 15 ornamental plants; to Chas. Hamilton for 12 coleus; to C. Hess for 30 ornamental plants; to C. M. Wagner for 50 cut blooms chrysanthemums; to Samuel Feats

& Sons 12 ditto; to John Wiedey for funeral design; to Halliday Bros. for dinner table decoration, bridal bouquet and basket; special to Campbell & Bankert for basket.

MACK.

Montreal.

The second annual chrysanthemum show of the Montreal Gardeners' and Florists' Club opened Tuesday of last week under very favorable circumstances; the weather has been as fine as could be expected. The plants were rather better grown than last year, more foliage and less stalks.

The plant winning the special prize was a magnificent specimen of Golden Rod about four feet high, one single shoot with a head about three feet six through and a mass of perfect flowers all standing erect without the aid of a single wire or stake. There were some gigantic specimens of Gloriosum, Source d'Or and Duchess of Connaught, the tallest being eight feet in a ten-inch pot. Several plants were over four and one half feet through and from five to six feet high.

One plant of L. B. Bird about six feet high, had six blooms, all over eight inches across, one of which measured ten inches. Altogether there was about 500 chrysanthemum plants in the hall. There were also several tables of miscellaneous plants.

The cut blooms of chrysanthemums certainly surpassed anything ever exhibited in this city, and I think would compare favorably with the best grown anywhere on the continent. Mr. James Bland's dozen blooms, which carried off the first prize as well as the special prize offered by Messrs. Pitcher & Manda, were of the kind that is hard to beat. The varieties and dimensions were as follows: Spiralis, 8 inches; T. C. Price, 8 inches across, 3 deep; M. L. Fabre, 5x2 inches; Elaine, 5x2½ inches; Gloriosum, 8x4 inches; Ada Spaulding, 6x5 inches; Count de Germany, 8 inches; Mrs. J. Wright, 9 inches; Stantead Surprise, 9 inches; M. de York, 5 inches; Ethel, 5x3 inches; M. C. Audiguier, 8 inches across.

The same grower's six Japanese were: Gloriosum, measuring 10 inches across; Gladiator, 9 inches; Mrs. Ben Harrison, 8x2 inches; M. C. Audiguier, 8 inches; Mrs. J. Wright, 8½ inches; Count de Germany, 8 inches. The same gentleman won the special prize for the best bloom in the show with a bloom of Gloriosum measuring eleven inches across. The six

incurved from the same were Princess of Teck, 3 inches; Lord Wolsley, 5 inches; Ada Spaulding, 6 inches; T. C. Price, 8 inches; Count de Germany, 7 inches; Mrs. A. Hardy, 6 inches. His six reflexed were Annie Salter, Elaine, Gaillardia, Spiralis, Mons. Boucharlat, M. L. Fabre, Mr. Bland exhibited a bloom of his new Ostich Plum which was greatly admired. A very fine set of fifty varieties from Short Hills, N. J., were very much admired; among them we found the following really fine ones: Mrs. De Witt Smith, Mrs. Frank Thompson, L. Cunningham, Etiole de Lyon, Mrs. F. Clinton, Mr. H. Cannell, Grandiflora, H. E. Widener, E. G. Hill, Thunberg, Alaska, Miss May Wheeler, Klotz, Sacher, Jas. R. Pitcher, Cythere, Cortez, Mrs. Medley.

Mr. James Hockley, gardener to J. Molson, showed a few blooms of Sunflower, which was generally conceded to be the best yellow in the room.

Mrs. J. Wright was generally considered to be about the best white. Jessica is also thought a good deal of as a white.

Wilshire Bros. showed some magnificent blooms. They also had a large exhibit

of plants. Florist Thos. Ware also had a large display of plants, all well grown.

First prizes were awarded to J. Bland for twelve distinct varieties, bank of chrysanthemums, on space 10x4 feet, twelve blooms, six varieties incurved, six reflexed, six Japanese, three varieties of large flowering white, three ditto yellow, three ditto pink, and largest and best bloom; to J. Kirkwood for six plants, three new varieties, three Japanese and best plant in hall; to J. Eddy for bank of chrysanthemums on space six by four feet; to W. J. Horseman for three incurved; to J. Hockley for three large flowering and six sprays of pompons; to B. T. Baan for three reflexed, best standard and specimen pompon; to Thomas Ware for specimen large flowering white and six double geraniums; to Geo. Trussell for specimen large flowering yellow chrysanthemum and three double Primula sinensis; to P. McKenna & Son for hand bouquet of chrysanthemums, table bouquet of same, six white carnations, six pink ditto, collection bouvardias, double ditto, single ditto, and for six of each of the following roses: Mermet, Bride, Perle, Niphetos, American Beauty and any other variety; to A. Pinoteau for three flowering begonias, three rex ditto and collection of carnations, to J. Walsby for six ferns, six table plants other than ferns and stove and greenhouse plants.

JAMES MCKENNA.

Toronto.

The Gardeners' and Florists' Club's first attempt at a chrysanthemum show in this city has proved an unqualified success, in consequence of which members of the said club felt jubilant and swear by all the gods of Japan and China to be better still next year. Our American friends John N. May, John Thorpe, Pitcher & Manda, P. Henderson & Co., and others gave us a "leg up" by sending over some of the best flowers sent that we can say with the poet (no need to quote name) "In spite of the McKinley bill we love you still the same."

In the 25 cut chrysanthemum blooms class Mr. Geo. Vair, gardener to Sir D. S. Macpherson, came in ahead with some magnificent blooms; E. G. Browne, florist, Hamilton, a close second, and Hy. Dale, florist, Brampton, third. For 12 blooms the same men came in in the same order. In the 6, Hy. Dale was first with blooms nearly as good as the American florists sent us, E. G. Browne second and Geo. Reeves, gardener at Reservoir Park, third. Single blooms, Geo. Reeves first with a magnificent W. W. Coles; Messrs. Spears & Musson second with a Mrs. A. Hardy, and Hy. Dale third with Mrs. J. Bullock. In the 25 plants Mr. Vair was first, W. J. Laing, florist, a close second, and John Cottrell, florist, third. In the Japanese W. J. Laing was first with six beauties, A. McPherson, gardener to Col. Sweeney, second, and Richard Marshall third. Mr. Wm. Houston was also a large exhibitor in the different classes.

The roses must be mentioned as being especially good, certainly the best ever exhibited in Toronto, and don't want to say where else as we are very modest. The honors were divided between Mr. John H. Dunlop, Toronto; Hy. Dale, Brampton, and Spears & Musson, Deer Park. The exhibit of John N. May, Summit, N. J., was well worthy of special mention. The Waban, the red Mermet and the new Hybrid Perpetual were each awarded a certificate of merit, and besides these there was a fine exhibit of roses and chrysanthemums.

Peter Henderson & Co. were also

awarded a certificate of merit for their exhibit of Louis Boehmer, the pink "Ostrich Plume," which was greatly admired. Messrs. Pitcher & Manda very kindly sent a grand exhibit of new varieties of chrysanthemums. And last but not least that G. O. M. John Thorpe sent some specimens of the very finest, which could not be otherwise coming from him. We wish he could have seen what we have accomplished in so short a time, as the second day of the show fell on the first anniversary of the club.

In designs of chrysanthemums for dinner table Mr. R. Mearns, florist, Parkdale, was first with a very elegant arrangement, Mr. Geo. Vair second, and Messrs. Tidy & Son third. The best design for funeral was a magnificent cross done by Tidy & Son, second by W. J. Laing.

Mantel decoration (a new thing in Toronto) came out strong. W. J. Laing had a corner of the hall partitioned off, carpeted and furnished all to himself, and it was quite a feature of the show. Messrs. Manton Bros. also were very successful in their treatment of this class of decoration.

It would take up too much of your space to go through the whole list, every thing was good, though of course we don't think there was not room for improvement. Our American friends may expect some good orders for new varieties shortly, judging by the way in which names were eagerly scanned by the trade and public in general.

Several members, notably Mr. John Chambers, our president, and vice-president of the S. A. F., loaned large collections of stove and greenhouse plants for decorating the hall (the same hall by the bye in which we intend the S. A. F. to hold their meetings next year), the general effect of which was quite beyond anything hitherto seen here. Lastly, but not by any means least, the financial part of the show was a success also.

The judge of cut flowers was Mr. C. Scrim, Ottawa, for plants Mr. S. Aylett, Hamilton, and Mr. A. Hogg, Toronto.

Springfield, Mass.

The chrysanthemum show of the Hampden County Horticultural Society last week was the fifth exhibition of plants and flowers here this year, and was by far the largest and best, the City Hall being fairly alive with color. The platform was decorated with palms and native evergreen trees, and a band gave a concert each evening. The attendance was large.

The exhibit itself was not as large in plants as last year, but there were more cut blooms, and all of better quality. There were about three hundred varieties exhibited.

The following were the professionals exhibiting: Miller Bros., Springfield, Mass., roses, carnations, fine "Grace Wilders," grown by H. Grant, violets, adiantums, hyacinths, and the pink ostrich plume chrysanthemum "Louis Boehmer," for Peter Henderson & Co., Gale Floral Co., Springfield, Mass., cut roses grown by C. F. Fairfield, who won two first and one second prize, chrysanthemums, palms, carnations, jardiniere filled with palms and ferns, and a decorated dinner table, winning two third prizes. A. Mielzel, Springfield, Mass., cut roses and chrysanthemums and a large variety of the latter in pots winning two specials, eight firsts, two second and two third prizes. A. B. Howard, Bel-

chertown, Mass., pansies, and won first prize. E. H. Howland, Holyoke, Mass., chrysanthemums, roses and carnations, winning one first and two second prizes. Temple & Beard, Cambridge, Mass., evergreen shrubs and trees. C. L. Burr, Springfield, Mass., pansies, winning one first and one second prize. Galvin Bro's., Boston, Mass., a fine show of cut blooms of chrysanthemums, grown by S. J. Coleman, gardener for C. J. Power, South Framingham, Mass., winning four special prizes. J. G. Bebus, New York City, cut blooms of pansies, carnations and roses, winning one first, one second and one third prize. Fevkes & Sons, Newton Highlands, Mass., chrysanthemums. T. H. Spaulding, Orange, N. J., four cuttings, Mrs. Spaulding, Miss Dutton, and two without a name.

Certificates of merit were awarded to A. Mielzel for decoration of platform; Temple & Beard for collection of evergreens and hardy shrubs; Gale Floral Co., collection of palms and decorated dinner table; Peter Henderson & Co., chrysanthemum "Louis Boehmer;" Edwin Fevkes, cut chrysanthemums; Gale Floral Co., cut violets and carnations; Miller Bros., cut roses and carnations; T. H. Spaulding, chrysanthemum seedlings.

The majority of the prizes, and all the certificates of merit were taken by professionals.

ALFRED B. COPELAND.

Minneapolis.

The chrysanthemum exhibition held by the Society of Minnesota Florists Nov. 12 to 14 inclusive was a big boom for the chrysanthemums and also for the florists. The display was far better than was expected, considering the short time the florists had to prepare for it, and the future of the chrysanthemum in the Northwest is brighter than ever. The attendance exceeded all expectations, and much is due the public and newspapers for their willingness to help the florists in their effort to make it a success. The New York Life Insurance Company donated the use of two large rooms in their new building free of all expense, and a better location could not have been had for money.

The plants, although not to be considered exhibition plants, were fine, sturdy plants, with large, well developed flowers. Mr. R. J. Mendenhall took first prize on best display and best twenty varieties, the Smith Floral Company being second; for best twelve varieties, plants, Wessling & Hartman received first prize and E. Noel took for best six; display of standards, Wm. Desmond first and G. Malmquist second.

For cut flowers August S. Swanson received first for best display and R. J. Mendenhall first on most artistic arrangement of cut chrysanthemums. For best twenty-five varieties R. J. Mendenhall received first and Smith Floral Company second. Best eight varieties, K. J. Mendenhall first for blooms of Source d'Or, E. W. Clarke, W. W. Coles, Wm. H. Lincoln, L. Canning, J. R. Pitcher, Pietro Diaz and Mrs. Pratt; Smith Floral Company second for blooms of Mrs. Fottler, George Bullock, Mrs. H. Cannell, Mrs. A. Hardy, Mrs. F. Thompson, Glorioso, Dr. McKey and Lillian B. Bird. For roses the Smith Floral Company received first and R. J. Mendenhall second.

Peter Henderson & Co. exhibited six fine blooms of the pink Ostrich plume Louis Boehmer, and as a curiosity it proved to be a great attraction, although many were disappointed in the color, being rather an off color.

Fine displays of orchids, palms, crotons, and other foliage plants were made in addition to the chrysanthemums, although no premiums were offered, and surely the Society of Minnesota Florists may feel proud of their first effort in arranging chrysanthemum shows.

The Pennsylvania Horticultural Society's rules for judging plants were adopted, and also similar rules for cut flowers and designs, and although it made hard work for the judges there was much less dissatisfaction over the awards made than is usually the case.

G. MGR.

Detroit.

The chrysanthemum show was quite a success. There was a very excellent display, the hall was beautifully decorated and the local press was liberal with its praises.

Premiums were awarded as follows: In plants Holznagle & Noel received first prizes for 15, 6, 6 grown in 6 to 8-inch pots, 6 yellow, 6 pink, 6 white, 6 bronze, 6 standards, pair, single specimen, 3 standards and pair standards; second prize was awarded them for 6, in 5 to 6-inch pots. John Breitmeyer & Sons were awarded first for 6 half standards, 12 in 6 to 8-inch pots, 12 in 5 to 6-inch pots, and 6 in 5 to 6-inch pots; they took seconds for 15, 6 in 6 to 8-inch pots, 6 yellow, 6 pink, 6 white and 6 bronze. The Detroit Floral Co. received second for 6 half standards, 6 standards and 3 standards, and third for 15, 6, 6 grown in 6 to 8-inch pots, 6 yellow, 6 pink, 6 white and 6 bronze. T. C. Bogula was second for 12 in 6 to 8-inch pots, and fourth for 6 yellow, 6 pink, 6 white and 6 bronze. B. Schroeter received third for 6 standards and 3 standards.

In cut flowers J. Breitmeyer & Sons were first for 50 blooms, 12 white, 12 pink, 12 yellow, 12 bronze and 12 assorted, and second for 100 blooms. Holznagle & Noel were first for 100 blooms, second for 12 bronze and third for 50 blooms, 12 pink, 12 yellow and 12 assorted. Nathan Smith & Son, of Adrian, took first for best seedling, second for 50 blooms, 12 pink, 12 yellow and 12 assorted, and third for 100 blooms and 12 bronze. Nathan Smith & Son and Holznagle & Noel were tie for second on 12 white. The Detroit Floral Co. took third for 12 white and fourth for 50 blooms, 12 pink, 12 yellow and 12 assorted. T. C. Bogula received fourth for 12 bronze and fifth for 50 blooms and 12 assorted. The prize for best collection of cut flowers shown by an amateur went to Mr. D. M. Baker, of Adrian.

Chrysanthemums in a Cold Tea Fight at New York.

A fight was engineered by W. S. Allen and Thos. F. Young between John H. Taylor and Ernest Asmus, for the largest six chrysanthemum flowers. Here are the varieties and their diameters: Taylor: Molly Bawn 11½ inches, Mrs. M. J. Thomas 10, Mrs. I. C. Price 9½, Mrs. Frank Tompson 10, Robert Crawford, Jr. 9½, Syringa 11½, total 61½. Asmus: Mrs. Frank Tompson 11½, Mrs. M. J. Thomas 10, Domination 8, Mary Wheeler 8, H. E. Widener 8, Mrs. Irving Clark 7½, total 54½.

The result was that Mr. Taylor won on diametrical measurement, but the general opinion was that Mr. Asmus' flowers were better in build and development. Any how the tea was drank, and some persons are wishing for a renewal of the fight.

Address THE AMERICAN FLORIST CO., Chicago.

WE HAVE received from Secretary Stewart a copy of the printed proceedings of the sixth annual convention of the Society of American Florists held at Boston last August. It is very neatly printed and contains the many valuable essays read at the Boston meeting together with the discussions on same. After this is said, it is unnecessary to add that it is filled with good things. Certainly no live florist can afford to miss the opportunity to become familiar with its contents. Any who are not members of the society should make application for membership now to Secretary Stewart. This will entitle them to a copy of the report as well as to the other benefits conferred by membership in the society.

HOLLY.—Early reports as to its condition this season indicate that while the trees are reasonably well berried in most sections, there is a possibility that some of the berries and leaves may drop before the stock is gathered owing to the very dry season. The best holly—that with notched leaves—has been so much reduced by extensive cutting the past few years that it is getting difficult to secure a large supply in any one section.

COULD THERE be any better evidence of the still increasing popularity of the chrysanthemum than the annual increase in the number of exhibitions held throughout the country. See our reports of exhibitions in this issue.

A FEATURE of the Indianapolis show was the profusion of exceptionally well grown cut flowers of chrysanthemums displayed by Fred Dörner. Another was the 50 collection grown to single flower shown by M. A. Hunt.

The printed report of the Boston convention has been issued and each member of the S. A. F. will probably have received a copy by the time this issue of the FLORIST reaches them.

"A DELIRIUM OF COLOR" is the expression used by a reporter for an eastern daily in describing the chrysanthemum. He adds: "Nature held a full palette when painting the chrysanthemum."

IT WILL hardly be necessary to say that it took quick work to give in this issue the illustrations of the Boston exhibition which appear elsewhere in this number.

WE SUBMIT this issue as evidence that the AMERICAN FLORIST is a live newspaper and up with the times.

WE HAVE in preparation views at the Philadelphia chrysanthemum show. They will appear in next issue.

THIS ISSUE may be safely designated as the chrysanthemum show number.

THE chrysanthemum now reigns from the Atlantic to the Pacific.

SAN FRANCISCO.—At the chrysanthemum show of the State Floral Society prizes were awarded as follows: Gold medal for cut flowers to Mrs. Copeland, amateur; silver medal for same to Wm. Rabcock; silver medal for best general display of chrysanthemums, ferns and violets to Timothy Hopkins; silver medal for best collection of plants in bloom to same; gold medal to John H. Sievers for largest and best collection of plants; silver cup to H. Yoshute for cut flowers.

WILMINGTON, DEL.—Last week's chrysanthemum show very considerably surpassed the exhibition held last year; but there was a serious disappointment in the attendance which was light. All the plants and flowers were from three local florists; Messrs J. L. Brown & Co., L. E. Baylis and Geo. W. Brinton & Son. The premiums were divided among these exhibitors, Messrs Brown & Co. receiving a majority of the first prizes.

PITTSBURG.—Messrs. Alex. Murdoch and Nat. Patterson of this city and Superintendent Wm. Hamilton of the Allegheny Parks and Theo. F. Bechert of Allegheny, took in the Philadelphia chrysanthemum show. They unanimously agree that Thorpe's "blue" and Harris' "tricolor" seedlings were stunners. Many visitors desired to view the "blue" but owing to an unfortunate accident the exhibition plant was non-presentable.

PROVIDENCE, R. I.—The chrysanthemum show of the Rhode Island Hort. Society was very successful. There was a fine display of plants and cut blooms. Exhibits were made by growers from all over the state and several displays of cut blooms of chrysanthemums and other flowers were made by florists in other states. The attendance was excellent.

YORK, Pa.—We have had our first chrysanthemum show. It was not a competitive exhibition and was given by the ladies of one of the local churches, but some very good plants were shown and we feel that we have not been left out of the procession.

SPRINGFIELD, ILL.—H. L. Phelps, the florist, gave an exhibition of chrysanthemums last week in a tent connected with his greenhouses. Many exceedingly well grown plants were shown.

DANVILLE, ILL.—Frank B. Smith gave a very successful exhibition of chrysanthemums last week, showing over 900 plants in 150 varieties, embracing the best new and old sorts.

Boston.

Mrs. F. B. Hayes, who so generously entertained the S. A. F. at Lexington last August is seriously ill.

Some of the orchid growers are criticising the representation of Cattleya Gaskilliana in the last number of the FLORIST which purported to be "life size," asserting that it is not much more than one-half life size.

The delegation from Boston to the Philadelphia Chrysanthemum Exhibition numbered ten. "Never had a better time in my life" is the verdict of all those who have returned up to date.

The supply of chrysanthemums on the street and in the stores show no diminution as yet. The quality is unprecedented and the quantity seems inexhaustible.

The exhibition at Horticultural Hall this week has been a great success in the

matter of attendance. The incandescent lights are kept burning all day long, and the brilliancy of coloring in the chrysanthemums is much enhanced thereby.

One of the best rules governing such exhibitions here is that which requires that the exhibits be renewed when the flowers show signs of fading. All the cut flowers are carefully overhauled every morning and fresh specimens put in place of the wilted ones. Neglect of this requirement involves forfeiture of prizes.

A most beautiful orchid now in bloom at Mr. F. L. Ames' greenhouses is Saccaballium Heathii. It is exceedingly rare and valuable but its greater claim to admiration is its beauty. The long full pendant raceme of pure white flowers is marvelously beautiful. Cattleya Bowringiana is now in full bloom, its abundant purple clusters are very effective. Vanda Amesiana has a tremendous flower spike now developing. A plant of Dendrobium Bromfieldii bearing a dozen spikes of deep purple flowers is one of the rarities shown.

WM. J. STEWART.

Chicago.

In spite of the wretched weather last Saturday there was a fair turnout at the annual dinner of the Florist Club at Kinsley's, and those who were there enjoyed themselves most thoroughly. Reference being made to the Chicago Flower Exchange by one of the speakers quite a spirited discussion was had regarding the practicability of the project and several erroneous ideas regarding the Exchange were corrected by Mr. Reynolds and others. The Horticultural Department of the exposition of 1893 also received attention, Mr. Vangum emphasizing the necessity of the club taking active measures regarding same. Every one present contributed at least a few words and a very sociable good time was had. The floral decorations of the table were very generous, a large quantity of flowers having been donated for the purpose by various growers. Over three hours were pleasantly spent discussing the menu and enjoying the after dinner speeches. Then there was an adjourned session at a neighboring bowling alley, during which some fearful and wonderful scores were made. Among those present were Mr. John Walker, who is now in the city in the interests of Craig & Bro. of Philadelphia, and Mr. Hammersley of Lake Geneva, Wis. The latter has signified his intention of applying for membership in the club.

As Mr. Leslie aptly put it, the purpose of an Exchange is to bring buyer and seller closer together, and anything that does that is a benefit to both.

Mr. J. T. Anthony has been quite seriously ill for the past week, in fact dangerously so at times.

Edgar Sanders returned from the east last Friday. He visited the Philadelphia chrysanthemum show and can't say enough in praise of the magnificently grown plants and flowers seen there.

H. G. Higley of Cedar Rapids, Iowa, passed through the city last Friday, on his way home from Indianapolis, where he had been to attend the mum show there.

Mr. Frederick Mau, the orchid importer of South Orange, N. J., had a sale of orchids at Ellison, Fliersheim & Co.'s auction rooms last Thursday. About 500 plants were sold at very high prices, nearly all going to local florists. Mr. Mau was present and expressed himself as satisfied with the results of the sale.

New York.

Never before has such an abundance of roses been seen here at this time of the year. It is estimated that more than half a million roses were shipped to the city during the week.

Everybody is complaining about poor business. Wall street alarms always have a demoralizing effect on our trade. There have been several state exhibitions of chrysanthemums during the week. Thorley, Scallen, Stump and Weed each having special displays.

Weir, Wiperman and Phillips, of Brooklyn, also made a splendid showing.

It seems to be a mania among our florists to have fine delivery wagons, some of them being very beautiful. Scallen may be said to have the most effective, the wagon being of a very pale yellow color, drawn by a superb team of white horses, originally belonging to the "Still Alarm" company.

Pitcher & Manda have announced their intention of holding an exhibition of chrysanthemums in the new Madison Square Garden during Thanksgiving week.

Jos. Fleishman has opened a flower store on Broadway and Thirty-second street, opposite the new Imperial Hotel. William P. Sears, who purchased Alex. McConnell's Sixth avenue store, is doing a splendid business.

Klunder says he will resume business shortly.

Lizzie McGowan carnations will be very popular for boutonnières the coming season.

Roman hyacinths and narcissus are making their appearance and are selling well, owing to the limited supply.

We do not look for much increase in business until colder weather sets in and chrysanthemums are over. J. YOUNG.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By first class florist and rose grower. Good references. Address C. R. Carr American Florist, Chicago.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

THE Philadelphia Press of Nov. 13 says: A syndicate of Englishmen has been for several weeks trying to secure control of all the leading seed warehouses in this country. A number of interviews with the different firms have been had, but as yet nothing definite has been arrived at. There is upward of \$20,000,000 represented in the syndicate, and it is the intention to buy the plants outright, but each firm can take a certain number of shares and retain an interest in administering the affairs of the branch which was once their own. The largest number of seed houses are located in this city and over \$2,000,000 is invested. About five times as much business is done here as in New York. The entire capital invested in the seed business in this country, that is in the principal Eastern cities, is estimated at \$10,000,000. The English syndicate has offered more than this amount to secure control of the business. A prominent seed merchant said yesterday: "The syndicate has been trying for some time to secure control of the seed business, but they have been so long about it that I think the thing will fall through."

WILLIAM HENRY MAULE is a seedsman. William Henry Maule is also a *Practical Farmer*. William Henry Maule ought to step into John Wanamaker's and buy a mantle of charity. Get it extra long and double width. William Henry, and wear it whenever you speak of *The Practical Farmer*. For some men there is an excuse for printing a poor-looking paper, but for Mr. Maule there is none, for he has both brains and money.—*Art In Advertising*.

INDIANAPOLIS.—F. C. Huntington will leave this week for Thomasville, Ga., expecting to remain there several months for his health.

PETER KIEFFER, the well known pomologist, nurseryman and florist, of Roxborough, Philadelphia, died November 7, aged 78 years. He was the originator of the Kieffer pear, for which he received a diploma at the centennial exposition and which has been widely distributed throughout America and Europe.

DANBURY, CONN.—There was a good display at the chrysanthemum show last week. In addition to the exhibits by local growers there were displays by the United States' Nurseries, Peter Henderson & Co., F. H. Pierson and John Thorpe.

HYDRANGEAS.

Fine plants from 5-in. pots, \$12.00 per 100. They may be safely sent by freight. Send enough money to prepay charges.

DOUBLE WHITE PRIMROSES. 2-inch pots, \$8.00 per 100. We will have again next spring small plants of Tuberosa Begonias, separate colors.

BRAUER & RICHTER, McConnellsville O.

FOR SALE.

LILY OF THE VALLEY, TULIPS, ETC., ETC.

— ORIGINAL AND LARGEST GROWERS OF —

LILIAM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

— BULBS NOW READY FOR DELIVERY. —

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, a crop of *Lilium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it is in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that *Lilium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as HEADQUARTERS FOR THE BERMUDA EASTER LILY: supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP OF 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine *Lilium Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large losses have resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

A White La France.

The original growers here of American Beauty, Messrs. George and Thomas Field, have on exhibition at the Small's chrysanthemum show a rose, new in these parts, grown by them, which they call the "White La France," and I should say, is destined to become a decided favorite. In habit, form and vigor it seems to be identical with the standard La France, but in color it is a delicate blush at the center, growing lighter and lighter until along the edges it is almost a perfect white. No apple blossom ever displayed more exquisite shading. A vase full of buds gave abundant evidence of its desirable qualities and successful propagation. Washington, D. C.

A WAIL FROM THE WOODS.

That is the title of a beautiful little Catalogue, perhaps the most unique that was ever published, which tells you all about the Woods and

CHRISTMAS GREEN.

It tells you how Ferns, Pines, Smilax, Palms, etc. grow, and what tough times a Woodsman has gathering them. It tells of a fortune in Sheet Moss. It tells why some people'd feed Mistletoe to cows, and what Caldwell, The Woodsman, would hate if he was a girl. It proves that the great Woodsman is really worth \$2,000,000. It tells how to cure a cold, and what "Jim" said when I told him I was going to write a book. J. Horace McFarland, the printer, says it is IMMENSE, and also said that you fellows would stand with open mouths till you took it all in.

DON'T MISS IT.

You can get a copy of the Catalogue and Price List for Season 1890 and '91 by applying to

Wm. J. Stewart, Boston, Mass.
I. G. Carmody & Co., Evansville, Ind.
DeCou & C., St. Paul, Minn.
Joseph Bancroft, Cedar Falls, Iowa.
Harry Chaapel, Williamsport, Pa.
Huntsman Floral Co., Cincinnati, Ohio.

Write to your nearest address for it, and you will buy your Green at the same place, as it is my aim this year to save you both freight and express charges and give you still quicker service. I forgot to say that the book is illustrated with photo-lithographs of the Wild Smilax, Long Needle Pines, Palms, Gray Moss, Ferns, etc., and the great Woodsman, horse, axe, boots and all. It will be sent direct to all my last year's customers November 20th.

N. B.—You need not get mad with J. Horace McFarland for saying that, because "IT IS TRUE, YOU KNOW." DARNED IF IT AIN'T.

Yours truly,

CALDWELL,
THE WOODSMAN,
Evergreen, Ala.

Root Lice and Ants.

In reply to the query of "W. F." on page 160 of the AMERICAN FLORIST for November 6, in regard to ground aphid or lice, I suggest that he try the following method, which has proved very satisfactory to me, and has saved me many aster plants.

Put about a handful of tobacco stems immediately around each plant, just under the bottom leaves. This has the effect of keeping the ants and aphid away from it and is, at the same time, a good fertilizer for the plant. The treatment should be given when the plants are, say three inches high, and the tobacco stems allowed to remain until after the blooming season. So much for a preventive, I know of no cure.

My experience also teaches me that the aster is much less liable to the attacks of ground aphid when clay is freely added to the soil (the soil here being naturally light and porous).

Hartford, Conn.

The chrysanthemum show given last week by the Hartford Co. Hort. Society was by all odds the finest ever given in this city. The collections of plants were extremely large and the individual plants of excellent quality, and the cut flowers were also unusually good. The new pink hairy root, Louis Bochner, was shown by Peter Henderson & Co. of New York and there were several handsome new varieties from the United States Nurseries. Short Hills, N. J.

First prizes were awarded to B. E. Beemer for best display of twenty named plants in 20 distinct varieties, and for 6 Japanese, 6 Chinese, specimen Japanese, specimen pompon named variety, specimen anemone named variety, 3 standard, 6 specimen blooms grown and exhibited on plant in 6-inch pot, 6 specimen plants in 6-inch pots, specimen single bloom and best seedling plant of 1890; to Christopher Bessold for 3 pompons, specimen Chinese, and 20 cut sprays in 20 distinct named varieties; to John Coombs for 25 cut blooms in 25 named varieties, 10 cut blooms in 10 varieties and for 12 cut roses not less than 6 varieties; to William May for collection of palms and ferns. Certificates of merit were awarded to Geo. W. Atwood for seedling Dandelion and to H. E. Chitty, Paterson, N. J., for seedling carnations. Fitch & Manda, received special mention for exhibit of cut blooms of chrysanthemums. Peter Henderson & Co. for Louis Bochner and B. E. Beemer for special exhibit of mushrooms. Diplomas were awarded to John Dallas of Fairfield for seedlings and to G. W. McCluncheon for dining room decoration; which last was a very taking feature of the exhibition.

Chrysanthemum Show.

Worcester, Mass.

That the popularity of the chrysanthemum in Worcester is increasing every year was shown at the seventh annual exhibition of the Worcester County Horticultural Society on November 12 and 13. There was a marked improvement in the plants and cut blooms and the attendance was also larger.

The plants were arranged around the hall on terraces, each class by itself; at each end of the hall was a large round stand of cut blooms neatly covered with white cloth, with a center piece of palms, these stands being connected by two long tables, also covered with cut blooms. The only drawback was the lighting, and that was miserable. Why a society with the standing and prominence of the W. C. H. Society will spend the time and money to get up a good exhibition and then spoil it between 5 and 10 p. m. by poor lighting is something I can not understand. A single arc light hung in the center of the hall would have remedied this evil and improved the show immensely; gas light will not bring out the delicate pink and yellow shades.

The exhibit of the State Lunatic Hospital, John Nelson gardener, was especially good and captured nearly all the first premiums. For the best six Chinese, in pots, State Lunatic Hospital took first with six well grown plants, the most conspicuous being Cherub, a good yellow. Joseph Brierly received second, and Geo. A. Lovell third. The Hospital also captured first for the best six Japanese in pots, a splendid pink variety, Clara Harris being the feature of this class; Mrs. C. E. Brooks showed six fine plants and was awarded second, Geo. A. Lovell third.

The pompons in pots were a rather poor lot, pompons not being very popular in this section. State Lunatic Hospital first, George A. Lovell fourth.

The Hospital had a very fine display of pot plants, consisting of 35 beautifully grown plants, W. H. Lincoln, Puritan and E. G. Hill being especially noticeable; Joseph Brierly second and Patrick Head third. First premium was also awarded the Hospital for a magnificent specimen plant of Mrs. Humphrey, a fine white variety. Joseph Brierly received second for a well grown Ada Spaulding and Geo. A. Lovell third; Joseph Brierly received first for best six Japanese in pots, limited to four blooms on a plant, with H. B. Watts second.

The State Lunatic Hospital showed 12 magnificent Japanese blooms, L. B. Bird, Kioto, Mrs. Fottler and Pres. Carnot deserving special mention; Mrs. C. E. Brooks showed a dozen fine flowers and was awarded second with Joseph Brierly

third. For best six Japanese blooms, State Lunatic Hospital first, H. B. Watts second, Mrs. C. E. Brooks third.

The flowers in the Chinese class were very fine, such old varieties as Cullingfordii, Jardin des Plantes and Duchess of Connaught being far ahead of the seedlings of late. In the collection of State Lunatic Hospital which was awarded first premium for best six cut blooms was Ada Spaulding (Query—should Ada Spaulding be shown in this class?) second prize was taken by H. B. Watts with six finely shaped flowers, and third by Mrs. C. E. Brooks. Mrs. C. E. Brooks was awarded first for 24 cut sprays, Chinese and Japanese, H. B. Watts second and Geo. A. Lovell third; the sprays of H. Camell, Mrs. F. Thomson and Crown Prince were very fine.

Two good stands of 24 sprays of pompons were shown by H. B. Watts, who took first, and Geo. A. Lovell second. Geo. A. Lovell showed the largest Japanese bloom, a Lilian B. Bird, and Mrs. C. E. Brooks was second with Mrs. Frank Thomson. The call for vases of one color brought out some very good Cullingfordii which, by the way, seems very hard to beat for a crimson.

Taking everything in consideration the show was a big success. A. H. LANGE.

Germantown, Pa.

Following the example of its older colleague, the Pennsylvania Horticultural Society, the Germantown Society excelled itself this year in its chrysanthemum show. Less than 200 plants were shown, but these completely filled the large hall, and scarcely a plant but showed a higher skill in cultivation than ever before by the Germantown growers.

The chrysanthemums were set on the floor in three large beds running lengthwise with the hall, the sloping floor of which set off the beauties of the autumnal queen of flowers to good advantage. Only the choicest varieties were staged, and these were of the most distinct types.

In addition to the chrysanthemum plants that have been known in commercial circles for some time, there were an unusually large number of seedlings exhibited, several of which show decided merit, and it is believed will be not only deemed worthy of being "sent out," but will hold a permanent place among choice collections. All of these belong to the large-flowered type.

Chrysanthemums trained into standards also were well represented, a line of them extending almost completely across the hall in front of the stage. The stage was set with naturally grown plants and dinner table decorations. The space under the gallery was devoted to cut blooms of chrysanthemums and designs composed of the same flower. The plants were judged and premiums awarded by

IN ORDER to give this paper your fullest support confine your orders so far as possible to those who advertise in its columns.

PLEASE do not forget that we can pay no attention to anonymous communications.

Thomas Cartledge, Walter Coles and J. William Colless.

In the class for nurserymen and florists first premiums were awarded to Woltemate Bros. for 9 plants, not less than 6 varieties, 4 plants, not less than 4 varieties, 2 plants 2 varieties, specimen yellow, white, red and any other color. David Cliffe took the seconds in same classes except in the first named class, in which Thos. Meehan & Son were second.

In the class for private gardeners, M. Clifford took first premiums for 9 plants not less than 6 varieties, 4 plants 4 varieties, specimen yellow and specimen any other color. John Brown received first for specimen white, and Frank Smith first for specimen red.

In the cut flower classes which were open to all, Paul Reinhardt received first premiums for 20 blooms 20 varieties and collection of cut sprays not less than 20 varieties. David Cliffe took first for design of chrysanthemum flowers, John Welsh Young first for collection of cut roses 6 varieties, Matthew McCleary first for collection of seedling chrysanthemums, and Robert Morrison first for specimen seedling and collection seedlings 6 varieties.

In the amateur class Boaz Phillips received first for 3 plants 3 varieties and specimen plant.

Of the special premiums offered, first for 6 plants 6 varieties in not over 12-inch pots, went to M. Sammon, and first for 2 plants 2 varieties to Woltemate Bros. Special mention was given to John Welsh Young for a dinner table decoration chiefly of ferns.

Oshkosh, Wis.

The display at the exhibition given here recently would have been quite creditable to a much larger city. The novel arrangement is worthy of note. The exhibition was held in the Casino club rooms, which consist of a small hall, a billiard room and two parlors. Each room was devoted to distinct classes of exhibits, one parlor for cut blooms and mantel decorations, the other for table decorations and sociability; the latter was comfortably furnished and the ladies served refreshments. The hall of course held the pot plants, and they just comfortably filled it. As one walked through the rooms he found new attractions in each one and probably each exhibit was more carefully inspected by the visitor than where the whole can be viewed at a single glance, though imperfectly, in one large hall.

The display of decorative plants was very good, those shown by E. Haentze, of Fond du Lac, averaged small, but were of the most popular sorts and were in splendid condition. The specimens exhibited by J. Lewis, gardener to Mrs. Edgar Sawyer, were so large and perfect as to remind your correspondent of those seen at Boston last August. Among them were an adiantum fern measuring four feet through, and in perfect condition, crotons five feet high and in perfect form, perises and other ferns in variety standing four to six feet high. The whole made a beautiful bank extending from the floor over the stage almost to the ceiling.

The chrysanthemums were excellent. Although the prizes were awarded to different entries as being first, second and third best, they were all good. In a few instances it required very careful work on the judges to determine their relative standing. Those shown by Mr. Lewis, both plants and cut flowers were very fine, and he may justly rank among the

expert growers of this country. The roses and carnations were very fair. Mr. John Nelson displayed a vase of seedlings.

Of the awards on chrysanthemums Mr. J. Lewis received first prizes for 12 varieties, 6 white, 6 yellow, 50 blooms in 25 varieties, 25 blooms in 12 varieties. Second prize in each of the above classes except the first named, went to John Nelson. Isaac Miles received second for 12 varieties, and third for 50 blooms in 25 varieties, and 25 blooms 12 varieties. Mr. Nelson took third for 12 varieties. Mr. E. Haentze received first on carnations and roses, Mr. Nelson taking the seconds in same classes. Isaac Miles took first on vase bouquet and rex begonias. Mr. Lewis was first in foliage plants, Mr. Haentze taking second. The prize for best specimen palm and fern went to Mr. Lewis. In the amateur class A. Bartlett took first on chrysanthemums and Geo. Reis the same on foliage plants.

C. B. W.

Washington.

The Indian summer of the past week has been favorable to our Autumn Queen and the parks and gardens, the markets and florists' establishments are all aglow with chrysanthemums of every hue and form.

Splendid as was the display at the fine show rooms of J. H. Small & Sons last year, their present exhibit far excels that, both in plants and single specimen clusters. A plant of W. H. Lincoln with some 300 bright canary yellow blooms varying in diameter from 3 to 5 inches covers an area of not less than 13 feet in circumference. A Grandiflorum of somewhat deeper yellow and like like form of flower shows blooms equally as large on a plant of like vigor. Near by stands a superb plant fully as large of "Mrs. M. Bowen," the flower of which while open has incurved leaves of a pale claret on the inside and rich cream color on the outside. Several of the blooms measure 20 inches in circumference. The fantastic shaped "Lilian B. Bird" with its delicate pink hue, and other similar Japanese varieties such as the "Mrs. Irving Clark," pink, shaded, and the "Austrian Flame," tassel leaved, white "Shasta" are here in plants of exceptional size. The incurved "President Harrison" of a deep claret color, many blooms measuring five and more inches in diameter, contrasted well with the beautiful snowball like clusters of the exquisitely formed white "Miss Minnie Wanamaker." The "Levi P. Morton" and "Robert Bottomley" were two more choice white specimen plants displayed, while specimen flowers of the satin sheened rose colored "E. Meredith" and vases of the "Alpheus Hardy," "Spaulding" and many others of exceptional sizes and excellent habit, comprising with the lesser grades not less than sixty varieties on exhibition, constitutes this chrysanthemum show, the best of anything heretofore attempted in this city. Numerous graceful palms and choice ferns are interspersed with admirable taste and the great 20 foot show window displays in its entire width a very sizeable representation of the U. S. Capitol Building, with its wide steps, fine columns and balustrades, its grand dome and Goddess of Liberty made up of flowers and at night illuminated by electric lights even to the lanterns on the porticoes.

Chas. F. Hale has also a fine display of floral arrangements in his window, consisting of an immense shield dome of flowers upon which are fifteen small flags with dates and mottoes representa-

tive of the various periods in our National history, the whole constituting a unique and at the same time an instructive specimen of floral art.

Trade both in plants and in cut flowers has materially revived and dealers everywhere I have looked seem busy and of good cheer.

Z.

Cincinnati.

We were promised a full report of the chrysanthemum show of the Cincinnati Florists' Club by Mr. B. P. Critchell, the same to be mailed in time to appear in last issue, but up to this time nothing has been received. We have, however, secured clippings from Cincinnati daily papers from which we glean the following:

The exhibition very considerably surpassed that of last year, a very large display being made. Among the most attractive features of the show was the display of orchids by John Rose, gardener for F. T. McFadden. The display filled two large tables.

First premiums were awarded to R. Witterstaetter for 12 plants 12 varieties, 5 plants yellow, specimen plant pink, 18 varieties bush plants, specimen plant any color, 6 standards, 20 varieties cut sprays. To T. Beck for 5 plants white, 5 pink, 5 other colors and specimen plant any other color. To John Freis for specimen plant white. To Sunderbruch & Sons for specimen yellow. To B. P. Critchell & Co. for 6 bush plants 6 varieties and 50 ferns in 10 varieties. To Fred Walz for 50 plants not more than two of a kind, specimen standard and seedling plant not before exhibited. To John Rose for 25 varieties cut blooms. To E. G. Hill for 6 cut blooms of varieties not disseminated. To C. L. Mitchell for 20 plants carnations, specimen plant carnation and begonias (4 classes and special premiums). To John Rose for collection of orchids. To J. A. Peterson for 50 palms in 20 varieties.

In the class for roses, cut blooms, first premiums went to T. W. Hardesty for American Beauty, Sunset and Watteville; to C. L. Mitchell for Duchess of Albany, La France and Mme. Hoste; to F. Walz for Marechal Niel, Cornelia Cook, Perle and Niphetos; to John Rose for Mermet, Bride, Bennett and Gontier. The first prize for collection of 30 blooms, not less than 6 varieties, went to T. W. Hardesty.

For carnations, cut blooms, 10 classes each containing 12 blooms of different sorts, first to R. Witterstaetter, second to C. A. Getz.

Syracuse, N. Y.

The Central New York Horticultural Society held their annual chrysanthemum show at Syracuse on the 13, 14 and 15th insts. It was the finest exhibition ever held in this city. Some magnificent flowers were staged which would have done credit to a much larger society.

The past summer has been very bad one for the growth of plants in this vicinity, owing to the long drought, but notwithstanding this great drawback the plants showed the great care and pains bestowed upon them.

L. E. Marquisse was the only florist who staged chrysanthemums, his exhibit was superb. P. R. Quinlan had a fine display of palms and tropical plants which added much to the attractions of the large hall. Among other exhibits worthy of mention were those of Peter Kay, grower to Hon. J. L. Belden, C. Rathbone, gardener to Mrs. Bissel, George Ham, gardener State Idiot Asylum, W.

VIEW AT THE PHILADELPHIA SHOW

Mencilly, gardener to H. S. White, P. Semple, gardener to G. Barnes. The plants and flowers of G. Batholme and Peter Kay were very fine, the latter had some very fine seedlings.

Messrs. Peter Henderson & Co. showed some blooms of their new "Louis Bochner," which attracted much attention. Messrs. Pitcher & Manda had a fine display of some very beautiful flowers. Mr. John Thorpe also sent a fine lot of flowers, among which were some very fine seedlings. The indefatigable Vice-President A. D. Perry had a stand of florists requisites, which was very tastefully arranged and added much to the appearance of the hall.

The price of admission was twenty-five cents the first two days and ten cents the last. It was clearly demonstrated that popular prices are what tend to make a flower show a success as the attendance was more than twice as large the closing day as on the two preceding. Had it not been for the heavy rain in the evening it would have been much larger.

The following were the prize takers: P. R. O'Neilan, L. E. Marquisee, P. Kay, G. Batholme, G. Ham, W. Mencilly, P. Semple, Thos. Durston, H. Youell, W. Huller.

Buffalo.

The first chrysanthemum show of the Buffalo Florists' Club was very successful. A very excellent display was made which called out most liberal praise from visitors and the press. The weather was favorable except on Saturday evening. Friday evening the great Music Hall was

uncomfortably crowded at times. The arrangement of the exhibits was very effective, Messrs. Chas. Keitsch, J. F. Cowell and Geo. Machure, the active part of the hall committee distinguishing themselves by the way this difficult task was happily accomplished. The orchestra was stationed in the center of the hall, partly concealed in a group of foliage plants. Three mantels handsomely decorated and two displays of table furnishings by caterers added materially to the exhibition. G. P. Rawson of Elmira, N. Y., filled a large space with chrysanthemum flowers, and Nathan Smith & Son of Adrian, Mich., showed cut blooms of new varieties. P. Henderson & Co. exhibited blooms of the Louis Bochner.

The display of cut flowers, designs and arrangements was large occupying nearly half of the exhibition space. The latter class were generally of superior quality and style, showing the progress our store men are making. Secretary Long had secured signatures to a guarantee fund to be used in case a deficiency occurred but as such will be small, in all probability the club will meet it unaided.

As the show proceeded and advertised itself, the disgruntled members of the craft, who didn't see the good of a show, or thought it would amount to nothing, began to show up, staying the day out, and before leaving thoughtlessly entering heartily into "we this" and "we that," etc. Critically they were "mums." One of them returned in the evening bringing his family. It is hoped they will actually be "in it" next time.

Wm. T. Bell of Franklin, Pa., judged the

plants, etc., first day, J. M. Gasser the flowers and arrangements on Friday. A collation was enjoyed on Friday evening. Though informal the toasts were responded to heartily and an enjoyable time was had.

President Scott is "great" still. He scores show prizes as readily as "strikes" in a ten pin game having reached the high number of fifty all told, twenty-six of them being "firsts." Secretary Long came close to the edge of the tureen as regarded prize-taking. He was here, there and elsewhere all the time, and little of his own work showed up in his displays; but a mantel decoration and a cross finished a half hour behind time, were worthy of first place, the judges said, and would have been awarded such were they ready on time. The uppermost topic now is, another show next year.

For chrysanthemum plants first prizes were awarded to William Scott for 4 Japanese, 8 Chinese, specimen Japanese, specimen Chinese, 24 specimens any variety. To George Machure for 8 Japanese, 2 Chinese, 24 specimens in 24 distinct varieties, 12 specimens in 12 distinct varieties, specimen plant of Mrs. Alpheus Hardy, 12 specimens of varieties introduced in 1888 and 1889. To Master Alfred Lewis for 12 specimens any kind.

For chrysanthemum cut blooms and arrangements of chrysanthemum flowers first prizes went to G. P. Rawson for collection of cut sprays, 12 naturally grown sprays and specimen bloom. To W. J. Palmer for 50 blooms in not less than 12 varieties and 50 blooms in not less than 4 varieties. To H. Tong for 12 bloo

in 12 varieties and 25 blooms in not less than 10 varieties. To Geo. Maclure for 12 blooms any variety. To Daniel B. Long for plateau of chrysanthemums. To William Scott for original design made of chrysanthemums.

In the geranium classes Wm. Scott took three first prizes and Mrs. D. Newlands one. For 12 carnations in not less than 6 varieties first prize went to Geo. Maclure. Of the three prizes offered for bouvardias two firsts went to Geo. Maclure and one to Wm. Scott. Jos. Rebstock took first for 12 single primulas. In the four begonia classes three firsts went to Wm. Scott and one to Geo. Maclure. In palms Wm. Scott took two and Jos. Rebstock one. In the three classes for dracaenas two went to Geo. Maclure and one to Wm. Scott. Geo. Maclure took first in each of the three fern classes, and Mrs. D. Newlands in the two classes for coleus. Wm. Scott received first for collection of 50 or more stove and greenhouse plants and for 6 specimens of heliotrope. Geo. Maclure for collection of 25 or more stove and greenhouse plants.

In cut roses first prizes were awarded to Wm. Scott for Mcmet, La France and Perle. To W. J. Palmer & Son for Bride, Bon Silene and general display of 100 or more blooms. Wm. Scott took first for 25 blooms of carnations, general display of pansies and general display of cut flowers.

In floral arrangements William Scott received first prize for 12 inch handle basket, dinner table center piece, 24-inch cross and 26-inch anchor. Daniel B. Long for bride's bouquet. Adams & Nolan for three corsage bouquets of roses and 24-inch pillow. W. J. Palmer & Son for Thanksgiving design and vase of roses. Joseph Rebstock for handle basket of any kind, 15-inch wreath and artistic piece of floral work. Geo. Maclure for basket of any kind.

London, Ont.

The chrysanthemum show of the Florists' and Gardeners' Club surprised all by its excellence, but the patronage from the public was not what it should have been. There was a beautiful display of chrysanthemums, both plants and cut flowers, and there were excellent exhibits of other plants and flowers, including a collection of orchids from Siebrecht & Wadley, New York. The members of the club feel rather disheartened over the poor appreciation of their efforts by the public and the consequent financial shortage. One of the local papers gives the citizens a severe overhauling for permitting so excellent a display to go comparatively unnoticed.

Awards were made as follows: Fred Dicks firsts for exhibits of 25, 12 and 9 varieties of chrysanthemums and best vase of cut chrysanthemums, seconds for varieties of 25 and 12 cut chrysanthemums and third for calla lilies; George Rennie seconds for varieties of 25 and 6 chrysanthemums; J. Gammage firsts for table decoration, bridal bouquet and carnations, seconds for calla lilies, carnations, cut roses and varieties of 12 chrysanthemums, and third for exhibit of 25 varieties of chrysanthemums; Thomas Wells firsts for calla lilies, ferns and exhibit of 12 greenhouse plants, and third for exhibit of primulas; G. & J. B. Cairncross seconds for table decoration and funeral design; and third for bride's bouquet and basket of cut flowers; W. S. & C. M. Greenaway first for basket of flowers, and seconds for greenhouse plants, ferns, funeral design, bridal bouquet

and primulas; J. Craig & Co. firsts for funeral design and cut roses, second for basket of flowers, and Webster Bros., Hamilton, firsts for varieties of 25 and 12 chrysanthemums.

Newport, R. I.

The first chrysanthemum show of the Newport Hort. Society was held the 11th to 14th insts. in Masonic Hall. There was a splendid display and the affair has been voted a decided success.

First prizes were awarded to David Gordon, gardener for L. L. Lovell, for 25 plants, 12 plants in 12-inch pots, 6 Chinese cut blooms and 6 anemone cut blooms, to A. Brandt for specimen plant, specimen plant of Mrs. A. Hardy, specimen standard, seedling plant, 50 cut blooms, 12 Japanese ditto and 6 ditto; to Robert McLeod, gardener to D. B. Fearing, for 25 plants of 1890; to A. McLellan, gardener for J. W. Ellis, for 6 Japanese in 12-inch pots, specimen anemone and 12 varieties regardless of class; to J. S. Cowles, gardener for Fairman Rogers, for 6 bush plants in 12-inch pots, 12 plants in 8-inch pots, 6 plants in 8-inch pots and specimen Japanese; to A. Swenson, for 12 plants in 6-inch pots; to Robert Christie, gardener for Mr. Wetmore, for 6 specimen standards; to Gibson Bros. for specimen Chinese and 12 varieties any class; to A. Meikle, gardener for W. S. Wells, for center piece for dinner table. For best seedling plant, Society's medal to A. Brandt, and special prizes to Gibson Bros. and A. McLellan, two each, and David Gordon, five.

Louisville, Ky.

Louisville's first chrysanthemum show opened on a very unfortunate day. It rained dismally all day and it was wet and disagreeable the day following. After that however the weather was fine and the attendance large. There was a large display of very good plants and some very fine cut blooms were shown.

Premiums were awarded to Nanz & Neuner for best five standard chrysanthemums and for best 20 varieties cut blooms of chrysanthemums; to J. Schulz for best floral design suitable for dinner, hall, or reception; to F. Walker & Co. for best design of floral shoe; to E. G. Reimers for original floral design; to C. W. Reimers for basket cut chrysanthemums, best five varieties cut chrysanthemums and best flat basket of same; to Mrs. Hodges for best vase bouquet; to S. J. Thompson for best new funeral design. Nanz & Neuner were given special mention for general display and assortment and for the "Mikado's dinner" which was spread on a table.

The Society of Louisville Florists under whose auspices the exhibition was given, is composed of the following firms: Nanz & Neuner, F. Walker & Co., C. W. Reimers, E. G. Reimers, Jacob Schulz, Samuel J. Thompson, Geo. T. Hodges and Clarence Stickler. The officers are Chas. Neuner, President; E. G. Reimers, Secretary, and Herbert G. Walker, Treasurer.

Correction.

In the report of the Indianapolis show, either the writer himself, or the printer, made a great blunder in describing one of the finest varieties exhibited; it should have read—

"Flora Hill, a large incurving pure white variety of perfect form and finish, centre full, does not show an eye; among whites what Widener is among yellows, etc." E. G. H.

PROVIDENCE, R. I.—At the chrysanthemum show of the Rhode Island Hort. Society held week before last, first premiums were awarded to R. J. Goddard for 25 named plants and 6 Chinese; to T. P. I. Goddard for 12 plants, specimen incurved and specimen Japanese; Arend Brandt for 6 incurved, 6 Japanese, specimen standard and best bloom new variety; to James Andrews for 4 pompons; to Farquar Macrae for 12 blooms Chinese; to Mrs. T. P. Shepard for 12 Japanese; to William Appleton for 50 blooms. Special prizes were given for chrysanthemum plants in pots to Thos. Curley, G. O. Westcott, Robert Johnson, James Nisbet, James Andrews, Arend Brandt and Chas. Fulford. For cut flowers to T. P. I. Goddard, James W. Stevenson, Thos. Curley, Howard Almy and Chas. Fulford. For displays of roses and violets to Wm. Hodgkinson. For carnations to H. E. Chitty, Paterson, N. J. for Lizzie McGowan.

ATLANTA, GA.—The chrysanthemum show of the Atlanta Horticultural Society was held in the rotunda of the capitol the 6 and 7 inst. There was a beautiful display. Mr. D. B. Woodruff the florist of Macon brought up a carload of excellent plants. Julius Martin of Little Switzerland also made a good display. Mr. Woodruff received the prize for finest standard chrysanthemums, and Mr. Martin for plants bearing the greatest number of blooms. Other awards were to E. Wachenodt for finest collection of roses, to Mrs. A. E. Boynton for finest collection of palms and like decorative plants, to Mrs. A. Lambert for warden case of plants, to J. E. Jackson of Gainesville for cut blooms of chrysanthemums and to James Burpitt for collection ferns.

EVANSVILLE, IND.—The chrysanthemum show was far superior to that of last year. The bulk of the first premiums went to the Floral Gem Greenhouses. Following is the list: For 25 plants, Floral Gem first, J. H. Wade & Co. second, Wm. Blackman & Son third. For 10 white Floral Gem first, Wm. Blackman & Son second, J. H. Wade & Co. third. For 10 yellow Floral Gem first, Wade second, Blackman third. For 10 pink Floral Gem first, Blackman second and third. For 10 fancy Floral Gem first, Blackman second, Wade third. For 10 standard Floral Gem first, Blackman second. For 25 cut blooms Blackman first, Floral Gem second.

UTICA, N. Y.—The flower show of the Utica Florists' Club at Oneida hall last week exceeded all expectations. It was voted a decided success. The exhibitors were Samuel Davies, J. S. Spencer, Jonathan Ancock, William Mathews, George Benedict, Frank Riley, Charles F. Seitzer, Charles F. Baker, George Treen, Peter Crowe, W. F. Hopkins, George W. Chatfield, J. C. Bigelow and others. C. H. Humphrey, of Rome, and H. M. Gage, of Sauquoit, also had varieties of chrysanthemums and carnations. It is quite probable that the club will give an exhibition some year henceforth.

BROOKLYN, N. Y.—The display of mums at the greenhouses of florist J. Condon has been visited by a large number of people. He had a splendid lot of plants in excellent condition. Another beautiful display was made by Mr. William Brown of Melrose Park, Flatbush, who threw open his extensive conservatory to the public. He had a splendid lot of chrysanthemums. A small admission fee was charged which was given to a local charitable institution.

VIEW AT THE PHILADELPHIA SHOW

KNOXVILLE, TENN.—An exhibition of chrysanthemums was held in a local store the 6 and 7 inst. Quite a number of plants were shown including a seedling raised here. It is the intention of the local florists to arrange for a regular competitive exhibition to be given next year.

COLUMBUS, GA.—D. B. Woodruff, of Macon, made a beautiful display of chrysanthemums at the recent exposition which received lengthy mention by the local press. He has received the title of "Chrysanthemum King of Georgia" from the Atlanta Horticultural Society.

ROCKFORD, ILL.—A chrysanthemum reception was given here on the 15th inst. by a leading society lady, who is a lover of this flower. Over sixty varieties were used in the display, the plants being effectively placed about the rooms of the house.

NEW BRITAIN, CONN.—There was a very excellent display at the chrysanthemum show given by the Horticultural Society last week. Florist C. T. Mason of Farmington showed 100 varieties, including many of the best new sorts.

MOUNT VERNON, N. Y.—A very successful chrysanthemum show was given last week by florist E. W. Weinmar in a large tent at the corner of First st and Second avenue. It was under the direction of a number of leading ladies.

SALINA, KAN.—Florist John Buchi gave a floral "reception" recently at his greenhouse. The display of chrysanthemums and other flowers made on the occasion

elicited very favorable comments from the local press.

MIDDLETOWN, N. Y.—A chrysanthemum show was held at one of the local churches last week. Prizes were offered, to be competed for by amateurs only. There were 33 entries, and quite a fair display was made.

NORRISTOWN, PA.—Florist E. Metcalf made a very beautiful display of chrysanthemums at his greenhouses last week. It was visited by large numbers, and was liberally noticed by the local papers.

FREDERICK, MD.—An exhibition of chrysanthemums was given last week at the store of florist Henry Trail. Several prizes were awarded to amateurs for specimen plants exhibited.

WILLIAMSPORT, PA.—The chrysanthemum and flower show at Chaapel's Greenhouses Nov. 12-15 proved a great success as was attested by the thousands of visitors who participated.

SAN DIEGO, CAL.—There was a beautiful display of plants and flowers at the chrysanthemum fair and it was voted a decided success compared with previous efforts in this line.

LA CROSSE, WIS.—The conservatories of J. C. Easton were thrown open to the public week before last and large numbers viewed the beautiful display of chrysanthemums.

SAN FRANCISCO.—The conservatories at Golden Gate Park have attracted crowds of visitors for the last week to see the

splendid collection of chrysanthemums now in bloom.

BROCKTON, MASS.—Mr. Geo. G. Snow a wealthy amateur threw open to the public last week his conservatories, and crowds flocked to see his beautiful display of chrysanthemums.

LOS ANGELES, CAL.—The chrysanthemum fair was very successful. The display of plants and flowers was unusually large and the quality was excellent.

HARRISBURG, PA.—A chrysanthemum show was given here last week by the Ladies' Advisory committee of the Young Men's Christian Association.

RALEIGH, N. C.—The annual chrysanthemum show held November 13 to 15 was a decided success. The best display was made by florist H. Steinmetz.

SCRANTON, PA.—The chrysanthemum show at the Arcade given by florist Clark attracted crowds of visitors. The display was better than ever before.

BANGOR, ME.—Florist F. H. Moses made a beautiful display of chrysanthemums here last week. The local press was warmly enthusiastic.

WILMINGTON, N. C.—A very creditable chrysanthemum show was given by the Ladies' Mite Society of St. James Parish November 14 and 15.

SCRANTON, PA.—Florists W. F. Will and T. B. McClintock gave a flower show last week at the Assembly building on Linden street.

SING SING, N. Y.—Florist George Classroom gave a free exhibition of chrysanthemums at his greenhouse during the past two weeks.

CARTHAGE, TENN.—A chrysanthemum show was given here week before last by local amateurs. It was quite successful.

BRIDGETON, N. J.—We are having a chrysanthemum show here. Don't propose to be left out of the swim.

COLUMBIA, S. C.—The recent chrysanthemum show was the finest ever seen here.

Exhibition Echoes From Philadelphia.

Mr. William Tricker, gardener for Judge Benedict, Dorgan Hills, Staten Island, N. Y., says: "A new chrysanthemum ought not to be sent out with a poorer center than that," pointing to Mrs. Bullock in his collection of 50 cut blooms, which he says goes also under the names of "Domination" and Mrs. DeWitt Smith. "Bride of Roses" and "Beauty" also the same, so also are "V. H. Hallock" and "Dawn." The latter variety was among importations received by two different firms, as I understood the matter, direct from Japan. This is where so much confusion is brought about. It is also said that old "Grandiflorum" has been re-imported and has been re-named "Dome of Gold." It is to be hoped that such is not the case. Of course most people know that this same variety is also known as "Temple of Solomon," but in the National Chrysanthemum Society's (England) catalogue the latter name does not appear, but "Mr. Barnes" is named as a synonym.

In Mr. J. Brydon's collection of cut blooms was a flower of Avalanche, which had been open one month; it speaks well for this variety as a "keeper," and especially after coming such a distance.

Everybody speaks in the highest terms of praise for the way David Beers, chairman of the committee of arrangements, and John Westcott, superintendent of exhibitions, managed the show. It reflects great credit upon these untiring workers for what they accomplished with the little assistance from other committeemen which they received.

There has been some talk about not opening the show until Tuesday instead of Monday, as was done this year, but it appears at this writing that it would be a mistake to postpone the opening. One reason given is that the show was not ready for the visitors, and another is that only \$180 was taken in at the door on that evening; but if only a small portion of the money received had been expended in securing the necessary amount of help the show could have been ready on time.

Aristochloa grandiflora is called the "Duck plant" on account of the flower when turned upside down looking like a duck in repose. These grotesque exhibits are not educational in the true sense of that term. There are a few no doubt who admired it as it was, but true lovers of flowers would have preferred seeing it as natural as possible where the real beauties of this large flower could have been seen. The rich coloring in the throat of the flowers and the delicate tracings could not fail to have drawn forth exclamations of pleasure if its charms had been displayed.

Mr. Tricker's list of 50 varieties which was awarded first premium were as follows: Kioto, Violet Rose, Veil d'Or, Miss Hartshorn, W. W. Coles, V. H. Hallock or Dawn, Robert Bottomly,

Mrs. Fottler, Eldorado, John Collins, Soliel Levant, Mrs. Geo. Bullock, Mrs. Irving Clark, Bynford White, Mrs. John Wanamaker, Ceres, Mrs. F. Jamison, W. H. Lincoln, Sunnyside, Mrs. W. Bowen, Superbiflora, Mrs. A. C. Burpee, T. C. Price, The Bride, Alecyon, Japonaise, Miss Mary Wheeler, Excellent, Mrs. H. Canell, Ada Spaulding, Pres. Harrison, Sunflower, Reward, E. G. Hill, St. Sophia, Ivory, Lilian B. Bird, Grandiflorum, Mrs. J. A. Edmonson, Coronet, Bride of Roses, Martha Harding, Mandas, Mrs. J. S. Fogg, Mme. Baco, Mrs. A. Carnegie, Mrs. Benj. Harrison, Pactolas, M. J. M. Piquiny, Mr. E. D. Adams.

A seedling was exhibited by J. L. Brown Wilmington, Del., closely resembling E. H. Fittler. It has the appearance of being a more robust grower than the Fittler, which must certainly soon go out of cultivation on account of its weak constitution. There seems to be more bronze in Mr. Brown's seedling than comes in generally, but the latter varies very considerably, sometimes it is nearly pure yellow, at others heavily streaked with red, giving it a bronzy appearance.

Mr. Robert Craig has bought Mr. Surman's seedling named "Mrs. Louis Childs Madeira," who says "it is the most remarkable seedling ever raised in America."

When the judges passed on the awards of chrysanthemums on Tuesday morning the Harry E. Widener exhibited by E. Asmus were very much wilted owing to some oversight in supplying water in the vase. This was most unfortunate, for on the evening they were placed in position Mr. Asmus' Wideners were away ahead of anything else in the hall; although Mr. Graham's Son had some magnificent blooms of the same variety.

In Fred. R. Sykes' collection of fifty blooms there was one fine flower of Widener, and a bloom of Mrs. Charles Wheeler, the equal of which has never been seen here.

Mr. Julius Koehrs' new hybrid rose attracted much attention on account of its bright color, and because it can be forced so early into bloom.

The seedling which took the "Veteran Prize" offered by Mr. Isaac D. Sailer was an incurved Japanese, delicate pink in color, and was raised and exhibited by W. K. Harris. The donor of the prize having the privilege of giving the novelty a name called it "Mrs. I. C. Sailer," and he may well feel proud of having so good a variety on which to bestow so worthy a name.

The Louis Boelmer exhibited by Peter Henderson & Co., promises to become a standard sort on account of its robust habit of growth; it is very distinct in this particular from Mrs. Alpheus Hardy, proving, I think, that one is not a sport from the other, although we must not be too sure of this stand taken, for there is no reason why a "sport" shall not vary in growth, from its parent, as much as in color.

"Eldorado," a seedling raised by Thomas Monahan last year was exhibited in fine form as a pot-plant by H. Waterer. It is an incurved Japanese, broad floret petals, and delicate yellow in color. It is a variety that promises to be a good exhibition sort both as a pot plant and for cut flowers; and it is earlier than most of the other variety yellows.

Secretary Farson is glad that the chrysanthemum show only comes once a year. He is now trying to recuperate, after the hard work of the past two weeks.

Two seedlings were on exhibition from John Lewis Childs; one named Mrs. J. L. C., the other Sunshade.

People still come to Horticultural Hall and ask for tickets for the chrysanthemum show. The daily press did nobly in the reports of the show and the advance notices, and the advertisements prepared by Mr. George C. Watson of the John Gardiner Co., aided greatly in preparing the public for the treat which was in store for it. Mr. Watson is an invaluable man in the capacity of committee on publication and much of the financial success of the show is due to his efforts as in indicated above.

The receipts were nearly \$3000, almost double those of last year.

EDWIN LONSDALE.

The Chrysanthemum Bee-Fly (*Eristalis tenax*).

This is a big brown bee-like fly that appears in large numbers upon our chrysanthemums and cosmos flowers in October and November. And they seem to come all at once, that is, I do not notice them till these flowers begin to open. They are especially partial to the cosmos and single-flowered chrysanthemums, and seldom trouble full double flowers. So long as we have plenty of these flowers out of doors these bee-flies are not at all troublesome indoors; but when the outdoor blossoms get scarce, or the weather becomes wet or inclement these dirty creatures betake themselves to the greenhouse. Out of doors or in doors they love warm sunny quarters and are always most abundant on the flowers upon which the sun is shining.

They do not puncture or eat the flowers, their business is entirely with the disk flowers, which they ransack thoroughly, sending their proboscis deep into the heart of every open floret. Then they beck out upon the petals or ray flowers and deposit upon them a yellow thin excrement, and in their clumsy way of stepping about often draw their heavy feet through this excrement and stain the petals in the most unseemly manner. These dirty stains are more readily noticed in the case of white flowers than colored ones and on greenhouse flowers because of their purer color than on outdoor ones.

I have also found these bee-flies on gailardia flowers in sunny borders, but not so far as I remember on any other outside flowers.

Now, however, I find they also infest stevia flowers and marguerite (*C. frutescens*) blossoms in the greenhouse, staining the latter quite badly, but not injuring the stevia perceptibly.

This bee-fly was first observed in this country at Cambridge, Massachusetts in 1875, but since then it has spread all over the eastern states. My attention was first called to it in October 1883 when it was quite numerous, just as plentiful as it now is. It is said to breed in pools of manure and water and cess-pools where its larvae are known as rat-tail maggots.

The mature flies are very diligent in searching the flowers and not at all easily disturbed at their work and can be caught by hand without much trouble. They can neither bite nor sting. When flying from flower to flower or from plant to plant their flight is very quick and they make a loud buzzing noise. In extenuation of their filthy habits it is urged by some that they assist in the pollination of the flowers they infest. No doubt they do, but of what advantage is this? Pollination always injures flowers required for cutting or conservatory or border decoration by hastening their decay. Chrysanthemums alone, among the flowers above mentioned need any assistance in

LÆLIA PURPURATA.

the fertilization of their flowers and surely it is far better to do this work ourselves with a camel's hair pencil than to encourage the aid of such loathsome creatures.

W.F.

Lælia Purpurata.

This fine orchid has been in cultivation about forty years and is a native of the southern portion of Brazil. Excepting the hybrids this species is the showiest of

this extensive genus and for this reason has been largely used as a parent by the hybridist. It thrives best with a somewhat cooler treatment than is usually accorded this class. Its large fleshy roots

delight in abundance of surface room and do not like to be disturbed. When the pot is filled with roots it is better to water with weak liquid manure. The new growths appear early in the spring and rapidly attain maturity, flowering generally about the month of June. The plants should then be placed in a cool airy house and kept moderately dry, though this species will stand more water than many of its congeners. It could be induced to bloom a little earlier *L. purpurata* would prove to be one of the most useful orchids to a florist, as it flowers very freely, producing as many as eight on a peduncle, which is always of good length. This orchid is also plentiful and cheap in the market and the first crop of flowers will more than pay the investment. F. GOLDRING.

Slingerlands, N. Y.

Wire Supports.

Where carnations are grown extensively the question of tying them up to some kind of support is one of very considerable importance, and involves a good deal of expense in time, labor and material.

One season I supported my carnations after a fashion by the use of longitudinal wires stretched taut, to which the flower stems were tied as they advanced in growth, but this proved a very unsatisfactory experiment, inasmuch as carnations are not like roses in this, that the rose plant itself can be secured to the wire, and the bud with the necessary length of stem may be detached when ready to cut without any displacement of the ties. But with the carnation it is the flower stem itself that needs the support, and if these are secured in bunches to the wires, several disadvantages at once present themselves, not the least of which is the greatly increased difficulty of gathering the flowers, the tie so interfering with this operation as to make it a very disagreeable one. After one season's trial of this method I abandoned it as decidedly unsatisfactory.

The next season I tried the experiment of placing a stick to each plant and tied up the flower stems as they advanced, but here the same difficulties presented themselves as with the wires, the ties were so much in the way when gathering the flowers that where large quantities are needed the method seems to me to be impracticable; besides, with the sticks, another very serious objection presents itself in the fact that however neatly and securely they may be placed to the plants, after a short time they begin to lop over, to fall down, and to describe as many degrees of perpendicularity as there are plants in the bed, there being insufficient depth of soil to retain them in an upright position.

With so many adverse and discouraging circumstances to contend with, for several seasons, I abandoned all attempts to tie up my carnations in any way or shape, leaving them entirely to a state of nature as far as supports were concerned, but even this method is not without its very serious objections, chiefly because after a while the plants fall over into the foot-

paths, and, partially blocking up the usually not over generous allowance of this commodity, become considerable of a nuisance, which is greatly aggravated in spring and early summer, when the plants have attained their maximum growth.

In view of this last difficulty I have this season adopted a plan which I think will serve a very useful purpose. Previous to planting my side benches I stretched twelve-inch wire netting (chicken size) along the back of each bench. This will prevent the flowers from falling down behind the benches, and as the growth demands the same will be done along the footpaths, which will keep the plants and flowers from hanging over and preserve a somewhat neat appearance. The cost of the wire netting here is 65 cents per 100 running feet, one foot wide, and, judging from present appearance, I think its use will pay. Shall be pleased to report later, and would like to hear from others in this connection. H. E. CHITTY.

Paterson, N. J., Nov. 12.

Carnations at Avondale

It was a wet ugly day when I took a jaunt through this section, but an interesting and profitable one.

A newcomer in the field, Mr. E. W. Shelton, has the heating apparatus described in number 119 of the *FLORIST*; it works like a charm and is certainly a first class arrangement for a medium sized place. He has two well built houses stocked with an assortment of carnations.

At Mr. Chas. Starr's there is the usual host of novelties. Christmas and Wm. F. Dreer will contest the field for that star of Mr. Thorpe's that carnation growers have placed above Grace Wilder. Golden Gate is looking well and will no doubt stand on its own merits. Amateurs especially will welcome this long sought for pure yellow.

He also has a crimson *J. R. Freeman* that has the unusual feature in this color of being quite fragrant. There is a steady effort toward a blue at this place and the result at this date is a rich deep purple; perhaps the blue will come later on.

At Mr. W. R. Shelmire's the hand of the cross-fertilizer is again visible and the result is a number of fancy varieties not yet named which will perhaps be introduced this season. Here there is also a new sort, not the result of crossing; a sport from Chester Pride that is pure white with all the characteristics of its parent; we will no doubt hear from this variety later on as there is the better part of a house on trial.

One almost breaks the command "Thou shalt not covet thy neighbors goods" at the sight of so many novelties, and involuntarily feels the size of his purse at the thought of buying and trying them all.

ALBERT M. HERR.

Wire Supports.

In reply to J. G. H., page 139, I have used wire supports two years to my satisfaction. Fasten a wire on sash bars over each row, then cut supports long enough to enter earth one inch, hooking on overhead wire. Mine are cut from common galvanized fence wire.

W. H. W.

BUFFALO.—Mr. Wm. McMillan, superintendent of the Buffalo parks, read before the Society of Natural Sciences, November 12, a very instructive paper on "Half hardy trees and shrubs."

Louis Siebrecht's.

It is a real pleasure to drop in to see Louis, he is always so bright and so happy, his stock is always in such excellent order, his system of succession crops so perfect and everything about his place so neat and clean. Tens of thousands of bulbs in pots and boxes are stowed away in his bulb shed waiting their turn and season to be introduced to the light and warmer quarters. Harrisii and Louisiana lilies having a good start in life fill up every vacant spot upon the benches, and as soon as more room can be cleared for them they will be repotted into large pots; candidums in large pots are ranged along the pathways the whole length of some of the houses, waiting for room on the benches. His finest candidums are home grown, that is, they were a lot of small bulbs bought by C. H. Allen a year ago and grown out of doors all summer. Quantities of mignonette and rose geraniums in small pots are also being grown to succeed the chrysanthemums on the benches.

Right over the hot water pipes and near the front wall of one of the carnation houses is a long trough-like box filled with spiraea. It is rather dark above it as the glass does not come down within a foot of the wall, but spiraea does well here for it gets the heat back and front and in this way the tops are kept continually dry and free from damp.

His heliotrope is very fine. The plants are one-year stock, clean-stemmed standards 16 to 20 inches high and all in 5 and 6-inch pots, and these pots plunged fully half their depth into the center bed which is a solid one. By having them in pots they are under complete control and flower well without growing too rankly; he feeds them with bone meal in the pots, besides the roots escape into the bench and do some extra foraging in this way.

His syria is in pots and now occupies the bench, which in a few weeks will be used for propagating carnations.

Chrysanthemums are most everywhere, and they are splendid. One house for late use and which is kept quite cool is filled with Mrs. N. Hallock, white; Pelican, white; Dosoris, yellow, and Thunberg, yellow. Mrs. N. Hallock is a reflexed Chinese flower somewhat small, white, quite late, and it is a compact grower with good foliage, good constitution and stiff spike. Pelican is a large-flowered Japanese sort, white, late, very free-blooming, and scattering blooms of it are generally to be had into mid-winter. Thunberg is excellent in its way but the flowers have got to be cut in sprays as they interlace so much that they cannot very well be separated singly. Dosoris is a seedling raised by me a few years ago. It is Japanese and a deep yellow, somewhat flat flower with narrow petals and one of the latest blooming of chrysanthemums. The foliage and constitution are perfect and the flower stem as stiff as a poker. "For market it is the best late yellow that I have got," remarked Mr. Siebrecht to me, "If I had a better one do you think I'd grow as much of Dosoris as I do? No sir, I wouldn't."

Now, "Dosoris" is an instance of over severity in selection. I raised it, but because it didn't come up to my ideas of excellence I discarded it. My neighbors thought better of it, however, and kept it, grew it and found the proper use of it, and now I have got to buy back the plant I myself pitched out three years ago.

Mr. Siebrecht grows a large quantity of Dianas. It is an improved Chinese variety, pure white, somewhat small, but ex-

ceedingly profuse and rather early and in much demand for "making up." Domination is a special favorite, and now about all cut. He has secured a sport from Domination and which also has white flowers, but the blossoms are unusually large, very full double, high in the middle and the middle petals twisted.

"Stonewall Jackson" (Crystal Queen), among pure white Japanese sorts is supreme. The flowers are very large, bolt upright, and on stout, stiff stems. Both with Mr. Siebrecht and Julius Scharrf this was splendid and the finest white chrysanthemum of any sort they had in full bloom. It is somewhat late.

Syringa, peach-pink, was wonderfully fine, the large, full double blossoms twisted into each other in sheaves. V.H. Hallack, not much unlike Syringa in color, and very large, was also much esteemed, but, so far, too scarce to test as a market variety.

Among yellows Mr. S. regards W. H. Lincoln as the very finest in the market. The flowers are very large, full double, high in the middle, pure deep yellow, bolt upright and on stiff stems. Kioto, although another type of flower, also pleases him much, but it should be well disabused to get fine flowers; only it inclines its head to the side a little too much. And he likes it better than Mr. H. Cannell which is of somewhat similar style.

He had very handsome Mrs. Alpheus Hardy from June cuttings, but Grandiflorum from summer cuttings made centaurea-like bunch growths and did not bloom at all.

The chrysanthemum bee-fly troubles him a good deal, and, although it shows a preference for composites, its tastes are becoming more general, and it is rather severe on early Paper White narcissus.

W. F.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XIX.

FULL BLOOM AND OVER-RIPE CLAIMS.

Yes, your business is very much like mine, accounts, bills, claims, notes, etc., all have a certain time to reach a full bloom and after that they get to be over-ripe and are worthless.

As you say, it is easier to sell roses in the bud; so accounts and claims that are fresh and new are better than stale ones. No one wants a note that is past due, or a claim that has stood so long that all its fragrance has gone out of it. Now, fresh business transactions have a pleasant odor about them. I like to handle the papers and catch a whiff of the sweetness of a "cash payment."

It is said that Queen Elizabeth who was a really great woman hated old accounts. Her orders were, Pay them off, don't let them accumulate on your hands.

Now, as you know, all of our states have statutes of limitation, that is, laws which require you to sue for a debt within a certain time or lose your remedy. After that time, generally six years, the debt becomes "outlawed," in other words, "over ripe," worthless.

I'm speaking now of such debts as for goods sold, services rendered, notes of hand, contracts to do or not to do, when not under seal. Claims for damages for false imprisonment, assault and battery, slander or libel must be commenced in some states within two years, in others within one year. But the general rule in all business matters is six years.

Now, the first question for us to examine is: When do the six years begin to run against an account? This is very important. The statute begins to run the moment the debt is fully due, that is, the moment you have a right to bring suit.

For instance, suppose it be a note of hand, then the six years would run from the moment it went to protest. If it were a bill of goods sold on credit the statute would run against it as soon as the credit expired, for you would not be entitled to bring an action to collect until then.

Yes, you're quite right, Father Time is a wonderful paymaster, and if he has his way he'll wipe out almost all the claims in the world, and the beauty of it is that he doesn't use a single cent in paying them off either.

What's that you say? Oh, no, if you absent yourself from the state while the six years are running you stop the action of the statute at once; that is, it adds just so much time to the six years. To outlaw a claim against you you must be "out-of-state" for six consecutive years.

Now you ask about an "open account" and when the statute begins to run against it. I'll explain that for you. The general rule is that you may bring suit on an open account any time within six years after the date of the last item, either debit or credit. The account may be full bloom for many years, provided it is one and the same account and has new blood put into it from time to time just before the six year limit expires.

For instance, you may sell flowers to some customer for twenty years, and if the account is kept fresh and alive, when you come to bring suit within six years from the last entry your statement may include the whole twenty years business. Of course it is always within your power to put an end to the account and start the statute running by simply rendering your customer a statement.

You say you render monthly statements. That's all right, it's a good plan, keep it up, but bear in mind when you come to sue an account don't try to break it up and sue for a portion at a time. That won't do. The law doesn't like law suits, strange as it may sound to you, and insists that when you do sue you must include everything that is due and owing at the time, absolutely everything.

What you ask about rent doesn't conflict with what I say. You may sue for each month as it becomes due, for at that time the next month is not due, but if you had to pay three such suits on the docket, the law would require you to bunch them before going to trial. You ask me if there is nothing to be done with an over-ripe account. Yes, a basket of fruit from your garden may be too ripe to sell or even to eat but it is not worthless. I needn't tell an old farmer like you that rotten apples are not of some use in a cider mill.

Well, as to these "over-ripe accounts," first try a little "Sunday school talk" on the debtor. Tell him that it is really not strictly honorable to let Father Time pay off his debts; in other words get him to revive the debt by a written promise to pay it. If a note, have him renew it if possible before it gets to be over ripe. Don't take his mere verbal promise, it's worthless.

Second, endeavor to secure a payment "on account," no matter how small, before it becomes outlawed, that will set it on its legs again for another six years. If he has no money, merchandise will do as well, only get him to state in writing

that such goods were meant as a payment.

Third: In case it is a joint note, don't think that a renewal note by one of the parties will be of any binding effect upon the other. The rule is that when there are several parties to a business transaction (I am not speaking of partners) one can't change the tenor of the obligation or renew it, so as to bind the others.

Your action once begun, that is summons once served, there is no specified time within which you must proceed to trial. It lies entirely within the discretion of the court. The calendars are full of suits as old as the century. But it's all wrong, if you must go to law, push for judgment as fast as possible.

Your absence as creditor from the state has no effect upon the statute, it hangs on running just the same. I refer to the debtor. Now this is the general rule. There are exceptions. Suppose, for instance, that the person who owns the claim is a baby six months old. The law will not only wait until he becomes of age, but in most states, give him a full year within which to commence his action, and in some states, even the full six years after he has become of age. Or, suppose a man be imprisoned on a criminal charge, the law would give him a full year after his sentence had expired. In a word, all disabilities stop the statutes. But this is a rather intricate subject and I'll not go into it.

Of course you must not think that the statute aims against the security, collateral to a debt. I mean, suppose you give a note with a mortgage on your house and let as security, the six years runs against the original debt only, and has nothing to do with the mortgage.

In all states, there are different periods within which a person must be prosecuted criminally, but once indicted, it stands forever unless tried or dismissed; merely "pigeon-holed" it doesn't kill an indictment. The crime of murder is never outlawed, but the man must die within a year and a day or it will not be murder.

You ask me about a demand note: The six years begin to run against it at once, that is from its date. Yes, a promissory note might be made under seal but that would destroy its negotiability, for you could only assign it or pass it by a written instrument.

You must bear in mind that notes of hand are peculiar creations of law and are not to be judged like other instruments. They are intended to make business transactions easily practicable and that the mere fact of your name being upon a note only makes you liable in case certain technical rules are strictly followed on. The general rule is that to revive a written obligation you must make a written instrument of equal solemnity.

In conclusion: Keep your business transactions all in the bud, fresh and crisp and the fragrance of your yearly balance will be delightful.

UNCLE BLACKSTONE.

Roses in Solid Beds.

Having to grow roses for flowers during the summer it would be a favor to a number of us if some one who has used the solid bed system would give us a few notes in regard to the best varieties to grow and depth of bed or bench.

A SUBSCRIBER.

QUOTE A number of the daily papers in the smaller cities are urging that arrangements be now made for chrysanthemum shows in their cities next year.

Address THE AMERICAN FLORIST CO., Chicago.

THE GREAT Chrysanthemum Centenary Festival of the National Chrysanthemum Society of England took place at the Aquarium, Westminster, the 11th to 14th insts. Many valuable and interesting papers on the chrysanthemum were read and there was a grand competitive display. The evening of the 13th a grand banquet was participated in by a large number. No effort was spared to properly celebrate the 100th anniversary of the introduction of the chrysanthemum into England.

SHIRLEY HIBBERD, editor of the *Gardeners' Magazine*, died at Kew, England, last Sunday, November 16. Mr. Hibberd was a popular, accomplished and brilliant writer on all horticultural matters, the author of many books on amateur gardening, an elaborate work on the Ivy, etc. He also was an active member of the Royal Hort. Society of London.

We have received from Messrs. Nathan Smith & Son, of Adrian, Mich., specimen blooms of their seedling chrysanthemum Yonitza, which was incorrectly printed in last issue as "Yarutza." The flower is certainly a handsome one, incurved, a ball of white faintly tinted with yellow.

FLOWERS of a medium sized white carnation, deeply fringed and fragrant, have been received from S. S. Bain, Montreal. He states that it is a seedling. It will undoubtedly prove useful should the habit and freedom of bloom come up to the mark.

SPECIMEN blooms of seedling chrysanthemums raised by Mr. E. Seidewitz, Annapolis, Md., have been sent us by that gentleman. Some of them are very good flowers, "My Maryland" being the best.

"CALDWELL the Woodsman" sends us one of his catalogues entitled "A wail from the woods." It is rather a departure in the catalogue line and parts are worth reading as a humorous skit.

We have received a copy of the souvenir programme of the chrysanthemum and musical festival at Louisville. It is very tastefully gotten up.

FROM a Philadelphia paper we learn that the new rose "Wahan" is a "lovely sprout" from the popular favorite "Cave Wermet."

THE Pennsylvania Hort. Society re-elected all the old officers at the annual election held November 18.

Society of American Florists.

The annual report of the society for the year 1890, giving a full account of the proceedings at the Boston meeting, is now ready and has been mailed to every

member of the society entitled to receive it. If there are any members who have failed to receive it or whom it has reached in a damaged condition they can obtain a duplicate copy by applying for the same. The report is mailed only on receipt of dues for the current year. Members whose dues for 1890 are unpaid, also all those identified with the trade who have not yet connected themselves with the society are solicited to forward the requisite amount (\$3) and the report, which is well worth all it costs, will be mailed in return.

WM. J. STEWART, Secretary.

Boston.

Prices in the cut flower market still continue low, especially on roses, which are being offered at apparently ruinous figures. Chrysanthemums are abundant but falling off in quality somewhat. Thanksgiving week will probably see an improvement in the market, particularly if the weather should turn cold.

Many of the S. A. F. members are still enquiring for the address of the photographer who took the group picture at Lexington last August. The address is J. W. Porter, 64 Warren St., Roxbury District, Boston, Mass. The undersigned will say further that while he has no doubts of the good intentions of this gentleman to perform all he agreed to, yet no officer or member of the S. A. F. or of the Gardeners' and Florists' Club nor any one connected with the Hayes' estate had anything whatever to do with bringing the gentleman there to take a picture. He was at that time, and is practically now, an entire stranger to every one connected with the excursion, and the venture was of his own choice and on his own responsibility only.

He asserts his intention to forward as rapidly as possible all the pictures for which he has been paid, and those who have not received them are advised to write to him direct and insist upon prompt attention.

Mrs. F. B. Hayes, whom the visitors to the Boston Convention have occasion to remember with gratitude, died on Thursday November 20. Mrs. Hayes has been ill for some weeks, indeed at the time of the visit to her Lexington home she was unable to meet the delegates on account of her failing health. Her husband was at the time of his death in 1884 president of the Mass. Hort. Society. Ever since that time Mrs. Hayes has continued the same interest in matters horticultural, and followed in the footsteps of her illustrious husband as a patron and true friend of the horticultural society. She has been a constant contributor to all the exhibitions of the society. The display of rhododendrons at Lexington every June is magnificent and is visited by thousands annually.

Mrs. Hayes' kind attention to the Society of American Florists last August was only a sample of the welcome which always awaited the fraternity at her hospitable home. A number of representatives from the Mass. Hort. Society, the Society of American Florists and the Gardeners' and Florists' Club attended the funeral, and appropriate floral offerings were sent in the name of the two latter organizations.

At the chrysanthemum show of the Mass. Hort. Society Geo. Hollis showed quite a number of seedlings, notice of which was overlooked in the report of the exhibition in last week's issue, among them were the following:

Edith M. Hollis, pink, delicately shaded

white and yellow, with long petals and high full center.

Capt. Crosbie, deep rose madder, reverse silvery pink; petals irregularly twisting, forming a large globular flower.

Weymouth Belle, pink, shaded magenta, petals broad.

Warrior, of Mrs. Wheeler type, petals scarlet red with light cinnamon without. California, full double, bright orange.

Old Colony, petals incurving, red on upper surface, old gold below.

Crimson Globe, Chinese reflexed.

Jessie K. Crosbie, pompon, light sulphur, full double.

The firm of S. W. Twombly & Sons having been dissolved the florist business at 161 Tremont street will henceforth be conducted by Mr. W. A. Twombly, the junior member of the late firm. W. J. S.

Diabrotica Twelve-Punctata.

This is the name of the 12-spotted cucumber beetle. But, far from it, this little rascal does not confine his taste to cucumbers, melons and squashes, indeed, they are to him as porridge is to a Scotchman, very good food when he cannot get anything else. Now this voracious little beetle has taken a special fondness for canna and cosmos. All summer long he ate into riddle-holes our lovely canna flowers, and as soon as the dahlias came in bloom he attacked their blossoms with earnest avidity. But the glory of his life seems to be cosmos and chrysanthemum flowers, in fact, although we have any amount of cosmos out of doors yet (November 1, for we have had only one light frost) we have got very little good of them because of this 12-spotted beetle. The chrysanthemums, because of their, doubtless, are not so badly marked as are the cosmos.

A curious thing about this beetle is, that it has appeared here in extraordinary numbers this season; they have never before been so numerous or so destructive; furthermore, while most all of our other injurious insects have, long ago, gone into winter hibernating quarters, this pernicious, little, spotted victim seems to be just as hungry, lively and energetic as he was in August or September. His cousin, the striped cucumber beetle (*Diabrotica vittata*), has never so far as I know, gone outside of his legitimate sphere to attack any of our other garden plants. But, altogether they are a bad lot. And it isn't the mischief they do as mature beetles that we have only to be afraid of; their larvae bore into the roots of succulitaceous plants and kill them. Whether or no they will do so in the case of other plants, I do not know. W. F.

THE MURDEROUS PORCUPINE ORCHID (*Orchis Porcupinea*).—The boss liar of the Albany *Telegram* is a Col., a Prof. and a botanist. A few years ago he had a thrilling experience in Southern Georgia when he saved a negro from the fatal embrace of the terrible man-eating plant. This carnivorous wonder is indigenous to the banks of the Upper Nile, but for convenience a little colony has established itself about 100 miles west of Savannah, and its members maintain their pristine fondness of the Ethiopian. The plant is four to six feet high and has long narrow leaves that change, the second year, to fan-shaped. Each plant produces only one flower which is cup-shaped, eight feet in diameter, and borne on a scape twelve feet long; it is composed of five petals one being very much longer than the other. The color of the bud is crimson, of the open flower purplish-green

embroidered with yellow. It is very beautiful, and fragrant as the attar of roses, that is, till it eats a man, then "the smell is like that of a charnel house." From the roots fine nerves run out in all directions for a rod or more and communicate with a brain in the stem of the plant. The leaves are thickly armed with keen-pointed, poisoned thorns behind which are sacks filled with compressed air. As soon as a negro treads upon the root nerves all the leaves facing in that direction discharge a broadside of their deadly thorns into the darky, and the root-nerves emerge from the ground and envelop, strangle and devour him. "These man-killers are particularly shunned by the negroes who say that a Porcupine plant that has once killed a man becomes rapacious for human blood and shoots out its tendrils for many rods around to entrap unwary negroes." They also call it "Devil Plant."

☉ The Seed Trade. ☉

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN BOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

MR. UNDERHILL formerly of the well-known pea and bean growers, Howard & Underhill, at Cape Vincent, is now at St Paul with L. L. May & Co.; doubtless those northern lights of Mr. May's seed department will stream up brighter than ever with Mr. U. behind the scenes assisting on the wires.

PHILADELPHIA.—Clarence W. Moore and Isaac N. Simon will open a seed store at 149 North Third street next month, under the firm name of Moore & Simon.

MR. CHAS. P. BRASLAVOFF, N. B. G. & Co., Minneapolis has been visiting the eastern seedsmen and discussing seed combine and beans in Boston, which is proper.

LONDON, Nov. 5.—To-day's reports describe the French clover seed crop as proving short, so that France will have to import from America.

BOSTON, Nov. 21.—The well-known suit of William Meggat against Joseph Breck & Sons for onion seed was decided to-day in favor of Mr. Meggat.

THE F. C. Austin Mfg. Co., of Chicago, makers of agricultural implements, are reported to have failed November 19.

News Notes.

ST. LOUIS.—The wife of Mr. J. Juengel the florist died recently.

BEATRICE, NEB.—A. C. Frese has started a cut flower business here.

ORANGE, N. J.—Mr. John McGowan, the florist, and Miss Annie B. Brodewer were married November 19.

TACOMA, WASH.—E. R. Roberts has opened a floral store at 908 Railroad St. On the opening day he made a display of blooming plants and flowers which attracted many visitors.

NEW BRITAIN, CONN.—At the last meeting of the Horticultural Society three new members were elected making an increase of ten new members in the last two months. At the next meeting the annual election of officers will occur.

MONTREAL.—Mr. J. Bland, gardener to Mr. J. Burnett, is the lucky owner of a new and distinct variety of the "Ostrich Plum" section of chrysanthemums. It is a deep yellow in color and about the same size as Mrs. A. Hardy, but globular in form, and decidedly more hairy. The flower is not fully developed yet, but as soon as it is it will be photographed. It is believed to be a sport from Palma.

CLEVELAND.—Fred Aul, of Glenville, is rebuilding his greenhouses at a point a short distance east of the old location. The new plant will be devoted entirely to the production of cut flowers. Caspar Aul is about about to purchase land some distance from his old location where he will build a new establishment. Fred Herke, son of Peter Herke, the south side florist, is now a nimble mail clerk on the Lake Shore route.

WORCESTER, MASS.—The annual meeting of the Worcester County Horticultural

Society was held on the 5th inst. with about fifty members present. The annual election of officers resulted in the selection of Hon. Henry L. Parker for president and Stephen Salisbury, George E. Francis and H. F. A. Lange for vice-presidents. Chas. E. Brooks was re-elected librarian and treasurer, and Edward W. Lincoln was re-elected secretary. The treasurer's report showed receipts during the past year of \$7,067.50, expenditures \$6,744.02, and a balance in hand of \$4,284.73. The society is now out of debt. A committee was appointed to arrange for a proper celebration of the fiftieth anniversary of the society two years hence. A member of the society was suspended indefinitely for infringing a rule of the society in exhibiting as his own productions plants and flowers purchased elsewhere by him.

Philadelphia.

Exhibition week was very large. Of course it only possessed the legitimate number of days, but the nights, the all nights, were very numerous. One in particular stood out as tremendous, it was the night of the annual chrysanthemum dinner of the Florists' Club.

About one hundred and twenty were gathered around the festive board, and such a lot of jolly good fellows, and how they did enjoy themselves. The visitors were from all over the country. Boston, New York, Summit, Washington, Baltimore, Lancaster, Pittsburg, and further west, were all represented. Boston sent ten, New York eighteen or twenty, while other cities sent delegations of their best men. Mr. Robert Craig presided. After the inner man had been satisfied and the coffee and cigars made their appearance, he started the ball rolling by a speech in his very best vein; it was full of good points. The flower of the day was toasted, and Mr. John Thorpe responding made one of his characteristic addresses, in which he said that the show was the finest in every department that he had ever seen, and he doubted if it had been equalled anywhere before, but still he expected to see the improvement kept up for many years to come. Mr. Calder responded to Boston, which was the next toast, in his usual bright and eloquent style.

It was now time for a song, and as the man of the occasion was present, Mr. Edwin Lonsdale, alias "The Duke," he was called upon and sang the following, written for the occasion, to the tune of Maryland! my Maryland.

Of all the flowers I love so well,
Chrysanthemum; chrysanthemum;
There's one whose praise I'll ever tell,
Chrysanthemum; chrysanthemum;
It's these fine and lovely synthetism,
And then last fall it sold so well,
And caused my bank account to swell,
Chrysanthemum; chrysanthemum.

No other flower can vie with thee
Chrysanthemum; chrysanthemum.
Such matchless form and symmetry,
Chrysanthemum; chrysanthemum;
If my spring crops should failures be,
I'd stem me down and wait for thee
To bring thy golden shower to me,
Chrysanthemum; chrysanthemum.

Thy opening buds are watched all day,
Chrysanthemum; chrysanthemum;
And some are up all night they say,
Chrysanthemum; chrysanthemum;
They twist and turn thee every way,
Then send thee to the show so gay,
And the judges, other fellows pay,
Chrysanthemum; chrysanthemum.

New York was now toasted, and Mr. Burns, president of the Florist's Club, responded in good style. The West was

then heard from, and Mr. Sanders told of his ramblings and of the surprising things he had seen in the chrysanthemum line, the best of which was the Philadelphia show.

Judge Hoyt of Nassau, New Hampshire, responded to the toast the amateurs. The Boston delegation brought the judge along to guard against any little legal troubles that they might fall into. We are happy to say that his services were not required, as we believe they all left town together the next day. His speech was very well received, and the manner in which the young farmers of New Hampshire are required to hustle in their very early days was surprising, to say the least of it. If the judge can grow the mums as well as he can make an after dinner speech he will soon have a lot of medals to show his friends.

Mr. Norton now responded for the Society of American Florists, after which Secretary Stewart told us how he would like to live in Philadelphia, and made a good address in his own familiar style.

About this time Mr. Harris and Mr. Thorpe, the two chrysanthemum giants, got into an altercation about the merits of their exhibits for the Sailer prize. This was a prize for \$50 offered by Mr. Sailer to be competed for only by Mr. Harris and Mr. Thorpe. It was for the best seedling, and the judge Mr. Robt. Craig, decided in favor of Mr. Harris. Mr. Thorpe kicked; he kicked hard; he said the plant he intended to exhibit had not arrived in time, and he ought to have another trial, as he now had the plant on hand, and would put it up against anything that Harris had or ever would have. Of course Mr. Harris would not stand this kind of talk and he sent it back. Finally it was resolved to have it fought over, new plants were to be produced, and it would then be seen who was entitled to the honors.

With a great flourish Mr. Thorpe produced his latest; a fine plant with three perfect blooms, and then the color, it was b-l-u-e, there was great applause, it was labeled blue without the beard. Then Mr. Harris unveiled his latest; it had three flowers developed, one red, one white, and one blue. Thorpe said it was painted, and kicked it off the platform. Harris told him that his was only paper, and tore the flowers to pieces. There seemed only one way out of the difficulty, and Mr. Craig said the prize would have to go to the best man. Every one agreed to this, and soon a ring was pitched upon the stage, four-ounce gloves were produced, and the contestants retired for a few minutes. Mr. Lonsdale was selected to second Mr. Thorpe, while Mr. Burton was Mr. Harris' best friend, Mr. May was referee, and Mr. Dean held the watch. It was for four rounds. Marquis of Queensbury rules. Everything being ready the contestants appeared. Harris wore a red sash and rosette, while Thorpe wore a blue sash and a blue plume stuck down the back of his neck waded over his head.

In the first round Thorpe got Harris' head in chancery and it looked all up for the Philadelphia man, but he broke away and got in some good body blows. On retiring to their corners they were liberally sponged by their seconds. It was give and take all through the match. Numerous claims of foul were made but not allowed, and finally the fight was declared a draw, and as Mr. Harris had the prize he kept it.

Finally when quiet was restored the speeches and songs were again in order.

Ex-Mayor Smith, who sat on Mr. Craig's right, made the best speech of the evening from a humorous point. It was received with shouts of applause. He said it was not a very nice thing for Mrs. Harris to have beaten every thing that came before her, but he had Mr. Craig's word for it that she did, and that when Mr. Widener beat Mrs. Harris it was a very bad case, and when he was mayor he thought ninety days at least would have been about the right thing for a man who would be so cruel as to beat a woman.

The supper was spread in the lower hall among the chrysanthemums. The company did not sit down until the show was over; in fact it was nearly 11 o'clock, and about 4 A. M. those who still lingered adjourned to the bowling alley, where some wonderful scores were made. The alleys, by the way, are pronounced perfect, but being new no very large scores have been made. There were no set matches at this time, as everybody here had their hands full between the show and their business, but before long there will be some challenges and trials of skill.

H.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By an experienced florist and gardener, well recommended, in private or commercial place. Address J. C. Am. Florist.

DUTCH BULBS,

NOW READY.
THE WISCONSIN FLOWER EXCHANGE,
133 Mason Street, MILWAUKEE, WIS.

Toronto.

There was a large attendance at the last meeting of the Toronto Gardeners' and Florists' Club.

The annual election of officers resulted as follows: President, by acclamation, John Chambers; 1st Vice-President, John H. Dunlop; 2nd Vice-President, Thomas Mantion; Secretary, A. Ewing, Assistant Secretary, Herman Simmers; Treasurer, A. Gilchrist; Executive committee, Messrs. Muston, Vair, Tidy, Hill, Reeves, Graham and Laing. Secretary Dunlop's report showed a fair amount in the treasury and a large increase in the membership. The president's address referred to the great success of the chrysanthemum show.

Coeleus Golden Verschaffeltii.

Regarding this coeleus, I would say for the benefit of Mr. Jason B. Roach and others, that I have used it somewhat extensively the past season with perfect success, and with excellent results. I have used it mostly in belt in contrast with the old crimson variety, for which purpose it seems far superior to the Golden Bedder, inasmuch as it grows stronger than the latter, its habit being pretty much identical with the old Verschaffeltii, consequently they harmonize more thoroughly and produce a better general effect. But I think for a solid golden bed of moderate height, for a distinct and special purpose, I should still prefer the Golden Bedder.

H. E. CHITTY.

LILY OF THE VALLEY, TULIPS, ETC., ETC.

New York.

Trade still continues very quiet.

Chrysanthemums are not so plentiful and the demand for roses is increasing. Carnations and violets are very plentiful.

Klunder has resumed business at No. 5 West 27th St.

John I. Raynor, for many years with W. S. Allen, has started in the wholesale business at 11 West 28th St., in partnership with Alex S. Burns, the well-known 6th avenue florist.

Herman Kuhn, of 896 6th Ave., has purchased greenhouses at Astoria, L. I., and will make a specialty of growing fine palms.

George Irlam, otherwise known as "Bones," will shortly open an office down town where he will buy and sell anything in the florist line on commission.

"Johnny" Weir of Brooklyn is now known as the Brooklyn sharper. When he can't make a good bargain legitimately, he generally offers to match coins. The feelings of the commission men can be better imagined than described since they have discovered he has been using a double headed coin. Johnny continues to laugh at the joke.

W. S. Lee has sold out his store in Union Square to Davey & Ezekel, and has accepted a position with Thorley.

The Klunder Co. had a very unique decoration at Delmonico's at the Jewelers dinner. There were six tables decorated entirely with vegetables. JOHN YOUNG.

Chicago.

Mr. Harry Bayersdorfer of H. Bayersdorfer & Co., Philadelphia, was in the city last week.

O. W. Frese, formerly of Frese & Gresenz, has opened a cut flower commission store at 66 Wabash avenue.

Mr. H. B. Beatty, Oil City, Pa., the secretary of the Florists' Protective Association, was in the city last week. He is always a welcome visitor.

Mr. P. D. Armour, the wealthy packer, is reported to be much interested in orchids and is building a splendid range of greenhouses, with a view to making a collection of these plants.

Charles Hartwig tried a bunch of Tidal Wave carnations this year and can't say enough in praise of this variety. He has 500 plants and says they beat any carnation he ever had for the production of large numbers of fine blooms which sell quickly at a good price. He cuts the flowers with long stems, sacrificing many buds, but even with the heavy cutting the bed is continually a mass of bloom. Mr. Hartwig is also very favorably impressed with the new rose Duchess of Albany, and will have a house of that variety next year.

HILL'S SET —OF— CHRYSANTHEMUMS FOR 1891.

There are so many "pretty good" seedlings in the field this year that it is the easiest matter in the world to make up a "set" and give them descriptions that prove most delightful reading; but what the florist wants for '91 is a set, not "pretty good!" but absolutely **FIRST RATE**, and with a record behind them that will warrant them premium winners at the next exhibitions; this is what we claim for our new set which cost us over \$1,000, but we got the best!! Read the records of the shows.

WIDENER. EMLEN, MRS. SARGENT, JNO. LANE, MOLLY BAWN AND OTHERS, ALL PRIZE WINNERS WERE DISTRIBUTED BY US LAST YEAR; THIS YEAR'S ARE PAR EXCELLENCE.

1. FLORA HILL, finest white in existence. Special certificate at Indianapolis.
2. SUGAR LOAF, First Premium at Cincinnati.
3. MRS. ISAAC D. SAILOR, Sailor Prize at Philadelphia.
4. BLACK BEAUTY, Blanc Prize at Philadelphia.
5. JNO. GOODE, the finest cut flower variety we have yet seen.
6. FRANK THOMSON, Certificate of Merit at Indianapolis.
7. MRS. J. G. WHILLDIN, Whilldin Prize at Philadelphia.
8. EMILY DORNER, First Class Certificate at Indianapolis.
9. R. MAITRE, In the set of six seedlings which won the \$100 at Indianapolis.
10. PHILIP BREITMEYER, Splendid yellow of Lincoln type.
11. C. W. DEPAUW, Fluffy pearl pink.
12. ELMER D. SMITH, Immense incurved scarlet maroon.

ALSO A MOST COMPLETE ASSORTMENT OF THE VERY FINEST CHRYSANTHEMUMS IN ALL THE NEWER SORTS AND THE BEST OF THE STANDARD VARIETIES.

Send for our Trade List containing full descriptions and prices.

Also Geraniums and Alternantheras.

SEND FOR PRICE LIST.

S. B. FIELD, Roselle, N. J.

GLADIOLUS BULBS.

Prevailing Colors, Pink and White.

Over 100 named varieties, and a number of choice seedlings, all mixed together. This collection has never been culled, and it has received a number of first premiums. In fact it has never failed to do so in any exhibition. To avoid retaining the best size, offer them this fall at \$10.00 per 100 for first size; second size, \$7.50. A quantity of small bulbs and bulbets also bargain.

M. CRAWFORD, Cuyahoga Falls, Ohio.

A Word from England.

Mr. James H. Laing of John Laing & Son, writes, tendering thanks for courtesies extended to him by the members of the S. A. F. during his recent visit to America, and adds:

"The Boston conference astonished me. The show was beautiful, and surpassed my most sanguine expectations. The conferences were exceedingly well carried out and equally well attended. Then passing to the pleasure part, I think all will agree that we were entertained right royally by our hosts of some of the finest private gardening establishments in the States. In fact the convention week will always be regarded by me as one of the brightest spots in my life. Most noticeable was the prevailing fraternal feeling displayed, each trying to insure the success of the convention. We should all say every success to the Boston Gardeners' and Florists' Club for their generosity and hospitality during our sojourn in their city. I was surprised to find America so advanced in horticultural matters, and I feel certain with the aid of so many intelligent and able horticulturists that she will run a close race with the old country."

Diseased Callas.

In regard to the query regarding callas rotting off at the neck of the bulb, we have been troubled the same way for three years, but have not succeeded in learning the cause. The most healthy looking plant will drop over in a few days after being attacked. When you tip the plant out of the pot you find all the roots have turned black as though they had been frozen. However, the small bulbils at the side keep growing just as if nothing had happened. I hope some one will solve the mystery and give us a remedy for the disease. C. B. W.

I HAVE ON HAND

2000 SEEDLINGS of the following ready Dec. 1 for 3-inch pots, now in 2-inch pots:
200 Lobelia Compakta Crystal Palace.
50 Cineraria hybrida grandiflora.
500 Bellis perennis (Snowball daisy).
500 Smilax, strong plants.
50 Primula sinensis fimbriata.
Ready Dec. 15 to 20.
200 Cineraria hybrida grandiflora.
200 Lantanas.

Price \$3.00 per 100, 25 at hundred rate.
These plants were started in moderate heat, grown in a temperature of 40 to 60 degrees day and night, and the seed was the best procurable.

SIPPLE, DOPPEL & CO.,
SYRACUSE, N. Y.

S. A. F. Attention

Our defeated competitor in "Standard" Flower Pot contest at the Boston meeting, for the **Certificate of Highest Merit**, reflects on the members of the Committee of Award as not being impartial in their decision. The members of that Committee were M. A. Hunt, Terre Haute, Ind., Chas. Henderson, of the firm of Peter Henderson & Co., New York, and Wm. K. Harris, Philadelphia, Pa. No fairer or more competent committee could be selected from the members of the S. A. F., and as far as diligent inquiry reveals, their decision meets with the approval of everyone excepting A. H. Hews & Co.

The official programme gave notice that the Certificate would be awarded to the display "which most nearly approaches the 'Standard,' such display shall consist of not less than one dozen of each size, made from working molds and not turned down." The sheet with drawings of the pots (which was gotten up by A. H. Hews & Co., under the instructions of the Committee of S. A. F. and sent to the different potters for their guidance) shows 17 sizes, and the number we exhibited; one dozen of each, as required. In regard to the statement published by A. H. Hews & Co., that "very many" of our pots were **"either ground, filed, turned or sand-papered to size,"** we wish to distinctly say that this is **FALSE**. The pots we exhibited for the Certificate were made exactly as we make them for our customers, and were not altered in any way whatever; in fact it is impossible to alter the inside measurement after a pot is once made; a mold that will make one pot correct will make any number (until the mold wears out) exactly the same. In reference to the absurd "propositions" of Messrs. A. H. Hews & Co., we decline to be a party to the proposed exhibitions as it would be a gross insult to the honorable gentlemen of the committee, who, after giving their time and labor to the society, are at least entitled to common courtesy.

THE WHILLDIN POTTERY CO.,

713 & 715 Wharton St., PHILADELPHIA, PA.

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown in this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN**. We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from 1 $\frac{3}{4}$ -inch to 7-inch inclusive, and 250 pots each from 8-inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

HEADQUARTERS for CHRISTMAS TREES!

Wisconsin Blue Spruce.

The finest of all in form and color. Well furnished, selected trees, carefully packed in light, strong crates, containing 25, 50 and 100 trees, delivered, Freight Charges Paid to any point within 300 miles of Chicago, at prices here quoted:

	25	50	100
4 to 6 feet.....	\$ 3.50	\$ 6.00	\$10.00
6 to 8 feet.....	6.50	11.00	20.00
8 to 10 feet.....	10.00	16.00	30.00
10 to 12 feet.....	15.00	25.00	45.00
12 to 14 feet.....	20.00	35.00	60.00

The two largest sizes are of Balsam Fir; fine selected specimens.

Special correspondence solicited on car lots.

As the Western Classification of roads now exact, by a recent ruling, ACTUAL PREPAYMENT of all freight charges on Christmas Trees, I am obliged to assume these charges, and also all risks of transportation; hence I am under the necessity of insisting upon the following:

TERMS OF PAYMENT: At least one-half cash with order; balance 30 days approved credit. All bills to be paid not later than January 1st 1891. No attention will be paid to orders not complying with above terms.

W. D. BOYNTON SHIOCTON, WISCONSIN.

SOUTHERN GREEN

For PENNSYLVANIA FLORISTS

Being earnestly solicited by Caldwell, The Woodsman, of Evergreen, Ala., to handle his goods in this State, who, as he expresses it, in his wicked woodsman way,

WANTS TO GET TO 'EM ALL.

I have, after a careful examination and test of the goods, consented, and will receive about DECEMBER 5th a large Shipment of Long Needle Pines, Palm Leaves and Crowns, Magnolia Foliage, Wild Smilax, Gray Moss, Sheet Moss, and Mistletoe cut FRESH from the FORESTS.

I can commend them to the trade as being of undoubted merit, carefully selected and packed. Prices low, while shipper's enterprise in placing them within quick and easy reach is well worthy of your support and commendation.

Send for Illustrated Catalogue "A Walk from the Woods," which I can commend to your notice as a pointer on catalogue writing.

HARRY CHAAPEL,
WILLIAMSPORT, PA.

IN THE last three issues of the FLORIST appeared reports of chrysanthemum shows and displays to the number of fifty-six, in as many different cities and towns.

IN DETERMINING the value of an advertising medium the question of circulation is not the only thing to be considered. Do the people who receive the paper read it? If not, then it is worthless as a medium.

New York.

The exhibition at Madison Square Garden was opened November 24 by and under the sole control of Messrs. Pitcher & Manila, United States Nurseries, Short Hills, N. J., to whom great praise is due for the energy and heavy expense attending such a monster undertaking. It took nearly 200 four-horse loads of plants etc. to make this exhibition, and from the immense size of the building this amount, though very large, looks to the casual observer almost lost.

On entering the garden from the main entrance a very large bed of chrysanthemums in the form of a triangle first strikes the eye. These are composed of bush plants of various sorts and sizes, on either side of which are arranged very large beds (some of a rectangular shape) of ornamental foliage plants composed of a very large assortment from 5 or 6-inch pots up to 15 or 18 inches. Conspicuous among them are some very fine dracaenas, crotons, marantas, etc. Directly in the rear of the first bed is a large circle filled entirely with Pandanus Veitchii arranged in the form of a pyramid, giving it a very bold effect. Next follow two long beds rounded at one end and running to a point at the other, filled with red, yellow, pink and white chrysanthemums. Conspicuous among the pinks is the beautiful late variety John Lane. Inside of these again is a very large bed in the form of a crescent, filled with fine palms and other foliage plants, containing many choice and valuable plants. On the outside of this again are two long beds somewhat resembling the blade of a scythe, filled with fine tree ferns and light colored foliage plants. Inside of the crescent is a large rustic bower-like bed in which are situated a dozen young ladies selling cut flowers, at which they are doing a good business. Directly in front of this and running across the entire auditorium is situated the greatest attraction of the whole show, namely, an immense collection of cypripediums, numbering 155 distinct varieties, the largest collection probably ever exhibited in the world at any one show. The actual number of blooms runs away up into many thousands, each variety being represented by large masses. Conspicuous among them are the lovely Spicerianums in large force, also Harrisianum and a host of others too numerous to mention. At either end of these are fine banks of anthuriums, which with their bright colors and fantastic forms give a very pleasing effect. In the rear of these and the cypripediums is a massive bank of trees of various sorts, the branches of which are all hung with many choice orchids in full bloom, the most effective of which are oncidiums, Vanda cœrulea, Odontoglossum crispum, Dendrobium chrysanthum with its bright golden flowers, and lœlids in variety. Among the

cypripediums are arranged some fine specimens and numerous smaller plants of Adiantum Farleyense, giving the whole a graceful finish. At the rear of these and forming a background arranged in a massive bank, are choice ferns and other foliage plants. Behind these again are arranged three massive groups of chrysanthemums, yellow on either side with the beautiful crimson Cullingfordii in the center.

Next to these are arranged two large rooms representing a reception or drawing room which is beautifully decorated with choice drapery covered with aspidragus, smilax, etc., and in the center stands a case of rare jewelry representing orchids, set with diamonds. Chrysanthemums are also represented in this line, but they look a little too heavy for ordinary mortals to carry around, on the contrary those representing the more fantastic orchids are very graceful and pretty. The room is 20x25 fully equipped with chairs and other suitable furniture to represent such a room. The other room is fitted up as a dining room, but it has altogether too much of a crowded appearance to commend itself to the public. Even the orchid flowers were so crowded through the center of the table that no one sitting on one side could see who was sitting opposite. Many beautiful orchids were used for this purpose, and evidently the designer thought the more that could be crowded in the better, but he entirely destroyed the desired effect. On the other table (there are two in this room, a breakfast and dinner table), decorated for a breakfast, many of the cypripediums in the plateaus are placed directly upside down and all laying out on the table as favors, giving the whole a very ungraceful and to many a flower lover it gave a positively painful impression. One lady remarking that it looked as if the guest had sat down to a very early breakfast after a very late dinner, and without having retired at all during the night. The silver and glassware was all of a beautiful design on both tables, and with the jewelry was furnished by Mr. Mason, of 246 Fifth Avenue, New York City. Surrounding these rooms and in a measure dividing them, are fine evergreens, containing many handsome specimens of Bays, both standards and pyramids. The lovely Araucaria Excelsa was also in strong force, in addition to bananas in fruit and many other choice things. Interspersed around the margin are chrysanthemums and other flowering plants representing an herbaceous border. At the extreme end of the garden and behind the rooms is placed a grand old plant of Livistonia (Latania) chinensis fully 30 feet high. This plant weighed over three tons. Around the entire hall are arranged tables of plants and flowers, or banks of same, on one of which are placed some very choice cut orchid blooms and some

exceptionally fine plants, also among the latter are particularly noticeable a fine specimen of *Lælia Arnoldiana* with 16 spikes of bloom, and a *Vanda cerulea* with five. On another table is placed a very choice collection of cypripediums (in fact the cream of the whole), noticeably the beautiful leucorhodon, an exceedingly choice variety, Veitchii, Insigne, Clautinii, and Maxima, Hookera, down to the graceful little vexillarium, all in perfect health and flowering very freely. On another table a fine collection of medicinal plants were placed, among which the beautiful little orange trees in full fruit attracted many of the visitors.

Following on around the hall are tables of fine single flowered chrysanthemums in small pots (4 and 5 inches). Cut blooms of the same were still very fine, others again contained fine banks of bouvardia, lily of the valley, Roman hyacinths, pansies, heliotrope, cyclamen, *Hernandia* lilies, etc. A very fine batch of *Erica* hyemalis, and another of fine seedling carnations in assorted colors attracted a large crowd of admirers. Those who missed this show lost a truly great feature in the horticultural world, and one of which Messrs. Fitcher and Manda may well feel proud. For, though so late in the season, the chrysanthemums are still very creditable, many of the blooms in fact are very fine. We trust the firm will be well repaid for all the labor and expense the undertaking cost. To Mr. Manda, the junior partner of the firm, is largely due the credit of carrying out the details. N.

Philadelphia Show Notes.

How large will the plants be next year? And how many flowers on each?

The inclination is toward rather too many pink shades.

A new grower won first for 25 cut blooms in a competition of six. The last three would have won easily three years ago.

Nearly thirty seedlings of merit; 136 all told.

It was said that Davy Bearn admitted the skeleton frames as an educator, a sort of primer as it were.

The fifty blooms which took first prize were of the following varieties: J. M. Pigmy, Pactolas, Mrs. J. S. Fogg, Mme. Baco, Mrs. A. Carnegie, Mrs. B. Harrison, Martha Harding, Mandus, Nineveh, Coronet, L. B. Bird, J. M. Hughes, Grandiflorum, Mrs. T. A. Edison, St. Sophia, Charity, E. G. Hill, Reward, H. Cannell, Ada Spaulding, Pres. Harrison, Sunflower, Alcyon, Japonais, Excelsior, Mr. M. Wheeler, Superbiflora, Mrs. A. C. Turpe, T. C. Price, The Bride, W. H. Lincoln, Mrs. F. Jackson, Sunnyside, Mrs. Bowen, Eldorado, Mrs. Fottler, Miss Hartshorn, Veil d'Or, Violet Rose, Kioto, W. W. Coles, Mrs. I. Clarke, Eynsford White, Mrs. Wanamaker, Jno. Collins, Soliel Levant, Domination, Dawn (V. H. Hallock), R. Bottomly, Ceres. J. T.

Additional Echoes from Philadelphia and Elsewhere.

This one all the way from Boston: "How long since A. H. Fewkes lived in Tewkesbury? That is where the alms-house is." It should have been Newton Highlands, Mass.

Here is another from Woodbury, N. J.: "We notice in your report of the Philadelphia chrysanthemum show that you described the new seedling 'Mrs. G. G. Green' as being white. It is a delicate yellow."

And this from Chicago. Mr. Edgar Sanders writes: "I have just come across a matter that may have escaped many of your great chrysanthemum growers, and that is your society (Penna. Horticultural) has been giving premiums for growing mums and even seedlings 44 years at least. For example, I have a record reading thus: At the Penna. Horticultural Society meeting November 17, 1846, the attendance of visitors was good, and the display remarkably fine and consisted principally of chrysanthemums, of which there were seven extensive collections of choice specimens. Premiums were awarded for best 12 named varieties of chrysanthemums to Benj. Gullis, gardener to Jacob Snider, Jr., 2nd best 12 to Archibald Henderson. For best American seedling chrysanthemum to Benjamin Gullis." So that Philadelphians have been raising seedlings a good while."

Thank you Mr. Sanders for this bit of interesting history about Philadelphia's early efforts in the cultivation of the chrysanthemum.

Mr. Thorpe in his essay read before the Penna. Hort. Society October 21 this year, and printed in the *FLORIST* November 6 last, also gave some instructive history relative to this Queen of Autumn and Philadelphia.

I am told that chrysanthemums *Ramona*, *La Fortune* and *H. E. Widener* are very similar. I looked through many collections at Philadelphia during the show very carefully to find if possible all the names so as to compare the flowers, but I failed to find any but the Widener. Will some of your readers kindly throw light upon the subject?

For the purpose of giving intending growers of orchids an idea of what varieties may be had in bloom for exhibition at chrysanthemum shows, below will be found a partial list of what made up the tastefully arranged orchid display made by Mr. Evans, of the Rowlandale Nurseries: *Cypripedium Lawrenceanum*, *C. Harrisianum*, *C. Spicerianum*, *Cattleya Bowringiana*, *Lælia anceps*, *Odontoglossum geyense*, *O. varicosum*, *O. crispum*, *Dendrobium Deari*, *Vanda cerulea*, *Cattleya Harrisoniana*, *Lælia Dayana*, *Calanthe Veitchii*, *C. oculata gigantea*, *Odontoglossum Rossii Majus* and *Zygopetalum Mackayii*.

What a magnificent plant *Draecena umbraefera* is for exhibition purposes. One came from the conservatory of Postmaster General Wanamaker which was about seven feet high and as far through; and this perfect specimen Mr. Alex. Young, the gardener, says is only four years old. Not a leaf was damaged and the stem was clothed clear to the base.

Meeting Mr. Wm. K. Harris on the street a few days ago I said: "Any seedlings opened since the show?" "Yes sir," said Harris, "I've got a shorter." "What is it like?" said I. "Come out and see it," said he. So the first opportunity I had to see it I went, and sure enough, there it was, a very large flower, light yellow in color and similar to Violet Rose in form. It will in all probability be later than the Widener, and it will be that much more valuable in consequence. It has been named "Miss Eva Hoyt," in honor of a New York lady. At the time of my visit Mr. Harris had not sold it. He holds it at a higher figure than he has asked for a seedling yet.

The last exhibition has been so eminently satisfactory in every particular that the enthusiasts are shaping their course, even now, for a grand rose show to take place probably during the Lenten

season, as the outdoor roses in June in this section are not what might be termed first class. E. L.

Philadelphia.

Mums the word, and mums the flower, for this season of the year; at least some rose growers must think so, as they are still waiting for the mums to go before bringing in their roses. There are many opinions expressed regarding this flower, and here are a few of them.

"Chrysanthemums have sold just as well this year as ever, only there are too many about." Thos. Cartledge.

"They're a fine flower and there's a place for them." K. Craig.

"I think the stores will be better off when they are done." George C. Evans.

"I'll sign a paper never to grow another one." Sandy Demison.

"If there were no chrysanthemums there would not be roses enough to go around." George Anderson.

"Confound the weeds! Still I like them." J. W. Colflesh.

"They're all right as long as we can get three dollars a dozen for them." K. Heron.

"Have sold more this year than ever. We have to work late at night to get our orders out." W. K. Harris.

"Queen of Autumn! Queen of —!" An all rose grower.

"They're a good thing. I sell lots of them at good prices." Robt. Crawford.

"You can say what you please about them, I like them, always did and always will." R. Kiff.

"Chrysanthemums, well the lot show put the society right on its feet. We must have cleared over \$1,200." Dan Farson.

"I like anything I can sell." Wm. J. Baker.

Cut blooms ranged from 50 cents to \$20 per 100.

Every one seems to have had a good Thanksgiving trade, and for the first time this season roses seemed scarce. They are bringing, *La France*, Albany, *Mets*, *Brides*, *Gullots*, \$6 to \$8; *Perles*, *Gontiers*, *Niphetos*, 3 to 4; *Carnations*, 1.25 to 1.50; *hyacinths* 5; *valley* 8; *violets* 50c a 100. 1.

Boston.

Thanksgiving Day trade was about the same in volume as in previous years. The day was the coldest of the season thus far, and the supply of roses has consequently been shortened up. Violets were in brisk demand and sold well. Good chrysanthemums are about finished but there is quite a supply of inferior quality blooms still in the market. Carnations are more abundant and bouvardia and Roman hyacinths are coming in in quantities.

Quite a number of weddings and other society events are talked of for December and the outlook for the immediate future is very favorable.

Needle pines and palm leaves from the south are in the market. City florists now use these serviceable greens in large quantities, for they fill the place to a great degree of plants in big decorations, and by using them therein in very cold weather quite a saving in cost of packing and risk of transportation of large and valuable plants.

A great many flowers were used at the funeral of the late Commissioner Tobin. Many large and expensive designs were sent and most of the local florists got a share of the work.

Several of the Boston brethren visited the great exhibition of the United States

VIEWS AT CHAAPEL'S TRADE DISPLAY. [SEE PAGE 246.]

Nurseries at Madison Square Garden, New York. The exhibition was a tremendous undertaking, well managed and worthy of all the success it attained.

The committee on establishing prizes has been hard at work at Horticultural Hall and the schedule of prizes for 1891 will soon be ready. The increased appropriations for the use of the flower and plant committees will give opportunity for some welcome additions to the premium list.

W. J. S.

Chicago.

Paul Krohn, the North Side florist, while driving on Clark street last Thursday lost control of his horse and collided with a buggy near Division street. The shock threw him upon his head against

the curbing. He was taken to the Alexian Brothers' hospital, where his injury was found to be a compound fracture of the skull, five inches long, across the forehead. The physicians say there is but little hope of his recovery.

Mr. J. T. Anthony is improving rapidly and will soon be around again.

The report that P. D. Armour is building a range of greenhouses with a view of making a collection of orchids proves to be incorrect. Mr. Armour states that he does not know an orchid from a sunflower and has no desire to acquire the knowledge.

The regular semi-monthly meeting of the Florist Club will be held next Thursday evening, the 11th inst. The last regular meeting was omitted, as the date came on Thanksgiving day.

Plans are already being laid for the exhibition of 1891.

The appointment of the chief of the horticultural department of the World's Columbian Exposition is daily expected. The appointment will be made by Director General George R. Davis.

Thanksgiving trade was very satisfactory.

UNQUESTIONABLY many lessons have been learned during the last month regarding the management of exhibitions, and with a view to securing to beginners and exhibition managers of the future, the benefit of the experience gained, we invite a discussion upon the subject, and ask those who have had experience to send in their views and suggestions for the improvement of present methods.

New York.

The flower show by Pitcher & Manda in the Madison Square Garden, as an individual effort was a great success. It is to be regretted that their effort did not receive the support it warranted from the local club. If it had not been for Pitcher & Manda, New York would have had no flower show this season.

The exhibition was very artistically arranged by Mr. Manda assisted by Mr. John Thorpe. The classifying of the different species of plants was very effective.

The avenues were lined with fine specimens of the treefern (*Alsophila Australis*). Chrysanthemums furnished the greater part of bloom, but the principal feature of the show was the very fine collection of cypripediums (Manda's pets). Manda is truly king-grower of the cypripedium and his exhibit on this occasion was well-worth seeing.

A group of the comet like *Anthurium Andeanum giganteum* hanging over a bed of Mrs. Alphus Hardy was a very striking feature of the show. Another feature was a dining room decoration. A large mirror on which were placed six white porcelain swans filled with Madam Cusin roses occupied the center of the table, garlands of the same roses being entwined amongst the dishes and passed through the mouths of the swans. Still another striking feature was a drawing room decoration. The tapestries being of a pale blue contrasted with a curtain of Madame Hoste roses, thrown carelessly over the mirror and tied at the side with a bow of yellow ribbon. On the mantel were placed some fine specimens of *Adiantum Farleyense* with sprays of *Oncidium tigrinum* peeping out between their beautiful fronds. Fine specimens of kentias and crotons were grouped in the corners, the whole forming an effective contrast to its surroundings.

An elaborate Thanksgiving dinner was given Thursday at the new Imperial Hotel. The tables, 39 in number, were handsomely decorated by Fleishman. The grouping of the national colors in flowers presented a novel feature, on each table being placed a center piece composed of Papa Gontier roses and Lady Emma carnations, Roman hyacinths and Neapolitan violets, arranged in bunches and making a beautiful after dinner souvenir for the ladies present. The hall leading to the dining room was decorated with curtains of smilax looped up with bunches of yellow chrysanthemums.

A very effective funeral design was made by Klunder for the casket of the late August Belmont. A wreath of cypress palm leaves encircled the casket, the lid of which was entirely covered with violets.

The recent wedding decorations at St. Thomas' church and for the reception at Sherr's, by Ellis, were very handsome. The principal flowers used were Yellow chrysanthemums and La France roses. The bride carried a bouquet of lilies of the valley tied with a white moire ribbon. The bridesmaids carried bouquets of yellow and white chrysanthemums.

Business during the week has been very good; the cold wave has given it its usual impetus.

Among our visitors during the week were W. J. Halliday and Mrs. M. J. Thomas of Baltimore, Geo. Savage of Rochester, D. B. Long and J. H. Rebstock of Buffalo, P. Norton and P. Welch of Boston. JOHN YONG.

Prospective Thoughts.

Well! Is everybody satisfied? Has there been glory and honor enough to go all round? If not, why not? For certainly never were such opportunities offered, never more gorgeous displays made, surely everything is propitious, the prospects seem to be magnificent, and every thing appears to be lovely for the mums. And it seems to me judging from the two or three that I have been able to see of the many attractive shows that have been held this fall, and the full and complete accounts that I have been enabled to read of the others, that such a bold determined and decided advance to the front has been made as will mark this the commencement of the second century of the introduction of the "Golden Flower" as a clearly, well defined and distinct epoch in its history.

It would seem that the grand standard plants exhibited by Mr. Barr at Orange, in this state, were absolutely perfect in every minute particular, and the several exhibits of specimen plants occupying the center of Horticultural Hall, Philadelphia, were marvelous examples of skillful culture, the twelve plants exhibited by Mr. Drexel's gardener were especial objects of admiration, these plants were arranged in threes on the floor of the hall so that they just touched each other and the twelve by actual measurement by myself occupied a space equal to 432 square feet, an average of 36 square feet to each plant, and by a very close inspection it seemed impossible to detect a single fault. The cut flowers in many cases were simply immense, not only in form and size but also in structure and many were so unique in color as to set one pondering over future attainable possibilities in the chrysanthemum. Verily the world doth move, and the florists are a progressive people. But when we reflect that exhibitions of the same character were in progress at pretty much the same time all over the country, in Canada and many parts of Europe, the thought presents itself that the power being exerted over public opinion and public taste must be something far beyond our means of reasonable computation.

There are also at this time other considerations which will suggest themselves to both societies and individuals. Are the schedules of the several societies and clubs so evenly balanced and so nicely adjusted as to be thoroughly satisfactory to the grower, and at the same time sufficiently remunerative to the society to allow a balance on the right side? It seems to me that while societies can well afford to be generous to the extent of their ability, that financial strength should at all times be retained sufficient to increase their influence whenever opportunity offers, and that in such careful business management the true strength of the society is developed and the greatest benefits secured to the grower and exhibitor, and the best results obtained.

H. E. CHITTY.

Paterson, N. J. Nov. 24.

New Chrysanthemum Etoile de Lyon.

The writer while visiting on Staten Island, N. Y., during the third week in November called upon that illustrious grower of the "Queen of Autumn," Mr. Wm. Tricker, the well known gardener to Judge Benedict, and saw the above variety in its grandeur. It certainly is one of the finest of all the French productions, a magnificent bold and fine globular shaped flower of perfect form and enormous size, in color light pink changing to white. It is of excellent habit and its merits must gain it a position in every popular collection.

Mr. Tricker is also making extensive preparations for the propagation of water lilies, to which he has for some time been devoting considerable attention and has a splendid collection. The last few years he has been paying particular attention to hybridizing his best varieties and some very choice seedlings may be expected both in form and color of the flowers. ALPHIA.

Long Island Notes.

BY WM. FALCONER.

Mr. J. L. Childs has removed his old seed store building to alongside of his new greenhouses on the other side of the railroad, a new building is a spacious and handsome four-story brick structure. Quite a village of pretty cottages are being built, mostly by his workmen, on a newly opened street beside the R. R. station.

JOHN objects to being "roasted like a herring," and it had not been for C. L. Allen the other day, I don't know but he would have roasted me.

Mrs. JOHN LEWIS CHILDS is the name of a very beautiful blush chrysanthemum raised at and now in bloom in quantity at Floral Park. It belongs to the Japanese section. The flowers are large, full double, 5 to 6 inches through, and have broad, incurved, shaw-like-cupled petals, and the plants are vigorous and very profuse. But the flowering stems are too slender and weak for the weight of the heavy blossoms.

GOLDEN CACTUS is the name of a very large-flowered Japanese chrysanthemum now in bloom and which was raised there from seed. The form and color of the flower are well expressed in the name.

AMPELOPSIS ROYLEI and Veitchii from seed. In the seed grounds I noticed several rows of seedlings of these two vines. The seeds were sown in the rows last spring at the same time, under the same conditions and alongside of each other, but the difference now is very marked. Roylei has far outgrown Veitchii.

CHRYSANTHEMUM indorum plenissimum is being increased from cuttings as this is the only way in which to get up a thoroughly reliable stock of the double flowered variety. But I also observed that where the fine double form was blooming the petals were shorn off as are those of Japanese or Chinese chrysanthemums, with a view of getting seed of a superior strain.

NEARLY 30,000 cactuses, sansevierias and stapelias in little pots are a sight to be seen only here. And 20,000 *Mantzia bicolor* now ready besides the tens of thousands in process of manufacture?

BONE DUST FOR AMARYLLISES.—Mr. McKay, Hallack's farm, uses a good sprinkling of bone dust on the surface of the soil in the pots, and to this he attributes largely the thrifty condition of a lot of *A. calica* ptyalopala he has now coming into bloom.

DANVILLE, ILL.—Frank B. Smith has added two new houses, giving him a total of over 10,000 square feet of glass.

EXHIBITION CHRYSANTHEMUMS GROWN BY JAPANESE GARDENERS

FREDERICK CREIGHTON is the name of a new pink carnation I found at Hallock's. It was raised by George Creighton of Tarrytown. Louis Siebrecht and Hallock both grow it. Mr. S. tells me the blooms of it Mr. Creighton sent to him last year were the largest and finest pink carnations he has ever seen; his own plants are hardly in good blooming condition yet.

Mr. McKay has a fine lot of young violets. He believes in September cuttings. He grows them in little pots then plants two in a hill on the benches. They set to growing right away and in winter produce the finest and largest violets, and they are not so subject to disease as are the large or year-old plants.

LOUISE E. MCKAY is a canary yellow coleus of vigorous habit. The originator claims that it is the best yellow coleus we have for outdoor use, that it maintains its yellow color persistently the whole summer long and grows uniformly, and that its leaves never dump off or become tarnished as is often the case with Golden Beldier.

JULIUS SCHARFF is making a specialty of "Stonewall Jackson", white, and Kioto, yellow, chrysanthemums and both are splendid varieties. The first has very fine, large flowers that stand right up on stiff stems, and good foliage; the last, when well disbudded bears uncommonly large, fine, incurved flowers but the long flower-stems are not, naturally, very well clothed with leaves.

GOLDEN ALPHA is an October-blooming yellow flowering chrysanthemum that Mr. Scharff raised from seed some years ago. Both he and his friend and neighbor, Louis Siebrecht, grew it largely for

cut flowers this year, and made more money out of it than out of any other variety they have handled, and all because of its earliness.

GLADIOLUSES blooming the first year from seed is something that has never happened with me, but C. H. Allen assures me that this has happened in a good many cases with him this year. This year, however, has been an unusually favorable one for gladioluses, and both Mr. Allen and the Hallocks are well satisfied with the season's growth.

IN MR. ALLEN'S yard I noticed a very handsome variegated form of the hardy yucca, *Y. filamentosa*.

Climbers.

A few good climbing plants form a useful portion of the general florists' stock, and this list need not be confined to those that are only useful as pot plants or for exhibition specimens, for there are many that may be made to serve a double purpose from the fact that they may be grown as pot plants for retail sales or when planted out in the end of a greenhouse will furnish sprays for cutting, the latter being of use either for foliage effects or for flowers, according to what the plant in question may be best adapted for. And among plants of this habit that are notably useful is that well known but remarkably beautiful climber, *Cissus discolor*, a plant that is easily grown, readily propagated and deserving of all praise for its elegant coloring.

When planted out in a warm house *Cissus discolor* is a rapid grower, and the combination of metallic green, white,

crimson and other tints in its foliage makes it most attractive when cut in long graceful sprays for decorative work. For exhibition purposes it is probably most effective when trained on a balloon trellis or some similar arrangement, and when in good condition never fails to attract attention.

In addition it may be used as a basket plant outdoors during the summer, provided the basket is placed in a shaded location, as this *cissus* is not partial to much strong sunshine.

Of somewhat similar character to the above are some of the *discoloras*, that is, in regard to foliage, but being herbaceous in growth the *discoloras* have not so long a period of usefulness to the florist. The two varieties to which reference is here made are, however, very pretty plants and deserve a place.

The first, *D. discolor*, is among the earliest to be cultivated for ornamental purposes of the *Yam* family, and is a slender-growing climber with rather wiry stems and cordate leaves, the latter being more or less marbled with various shades of green on the upper side, while the under surface is reddish purple.

The second variety to which attention is invited is *D. metallica*, this being a considerable improvement on *D. discolor*, as the foliage is variously shaded with olive green and bronze and attains a length of four to six inches. During the period of rest the tubers of the *discoloras* may be kept in much the same way as those of *caladiums* are treated, and propagation may be effected by cutting the tubers into short lengths in the early spring, and by placing them in a warm house for a time their growth is usually

assured. Division should not be attempted while the plants are growing, as loss may result thereby.

If space can be spared for its accommodation a good plant of *Passiflora princeps* (*P. racemosa*) planted out and trained on wires attached to the roof makes a valuable addition to the available stock of cut flowers, and is seldom out of bloom. The long racemes of bright red flowers produced by this plant are very showy and especially useful for church decoration, and though the individual flowers do not remain open very long, still the sprays last well in water and the succession of buds is almost as ornamental as the flowers themselves. *Passiflora princeps* is naturally a strong grower and is usually more satisfactory when planted out in a house than when grown as a pot plant. A light loam well drained and enriched with some old cow manure is a suitable compost, and an occasional watering with liquid manure will be found beneficial. Among the old fashioned plants once much esteemed for spring flowering was *Tropeolum tricolorum*, an easily grown and very free flowering variety of this very extensive genus. This is a tuberous rooted plant and should be started into growth in the fall, the tubers being potted into the pots they are intended to bloom in, as they do not flourish if the roots are disturbed after active growth begins, and a fit compost for potting is composed of two-thirds good loam to one-third of peat and some dry cow manure, to which should be added sand enough to render the mixture open.

The growth of *Tropeolum tricolorum* is slender, and the leaves are divided into several leaflets and dark green in color. The flowers are produced in great quantity and are colored with a combination of orange-red and yellow and tipped with black, and though individually small are very showy. A graceful way of training this plant is to insert two or three small twiggy branches in the pots in place of stakes, and to allow the plant to ramble at will over them, and when in full flower the result will be admirable.

W. H. TAPLIN.

At the Recent Exhibitions.

It is exceedingly pleasant to note that carnations have formed quite a prominent feature at several of the exhibitions this fall, and that they have been shown in greater numbers than heretofore, which is a healthy sign and indicates a growing taste, as well as a more decided recognition of the importance, value, and increasing popularity, of these fall and winter flowering plants, and the premiums offered in various forms by several societies show a disposition to encourage and develop their culture, all of which is very gratifying to the grower. And as the main object of the society is clearly to encourage and the objective of the grower is a successful competition the question presents itself which is the best way to subserve the interests of both?

The New Jersey Horticultural Society in its last schedule offers a separate premium for a bunch each of six distinct colors, viz, scarlet, white, pink, yellow,

crimson, and red, also a separate premium for a bunch of the best new variety, each bunch to contain twenty-five flowers. This seems to me an excellent plan, as it not only has the effect of bringing together in competition different varieties of the same, or nearly the same shades of color, but it also requires twenty-five flowers to comprise the bunch, which is the usual number put into bunches when gathered for market by the grower. This feature will cause the grower to use skill and judgment in the very simple operation of tying up his bunches (which admits of wonderful improvement), so as to make them most effective when arranged for exhibitions.

The Chicago Florist Club in its last schedule offers premiums for certain specified varieties, a bunch of each comprised of twenty-five flowers. This plan while it would have the effect of bringing into competition those special sorts named, would not be so likely to assist in determining the best in any given color, which in my estimation is a most important matter. For instance there are several varieties in the field as rivals to Grace Wilder, now it is simply impossible for a single grower to plant a sufficient number of each of these sorts in any one year to determine their respective values, but if premiums of sufficient amount were offered to induce the raisers of these varieties to place them on the exhibition stand side by side with Grace Wilder herself, then we should have an opportunity to examine their respective merits, and determine which is the best for general purposes. This same rule would also apply to carnations of all shades and colors, and it seems to me would be the legitimate way for raisers of new kinds to present them for public approval.

The Pennsylvania Horticultural Society offers a prize for a collection of cut carnations in masses, no flower twelve flowers of a kind, which in proportion to value of premium offered is flowers enough, but I think the society would be the gainer if the amount of premium was three times as much, and the number of flowers limited to twenty-five of each sort.

The Society of Indiana Florists, the Cincinnati Florist Society, the Erie P., Chrysanthemum Club and others manifest considerable liberality towards the carnation, and perhaps some of them may be able to gather a useful hint from the suggestions which I have made.

Now, while on the subject of societies and exhibitions, I have what I consider a very important suggestion to make. The officers of the many societies that have held exhibitions this fall cannot have failed to notice the eagerness with which the representatives of their local newspapers have been on hand to gather and distribute all the leading features of the exhibits, and in many cases minute details have been gathered and published with an exactness not always expected from the average daily paper. These same newspapers are the real educators of the masses; thousands of people read them who will never read the horticultural papers. I would therefore suggest that ample arrangements be made at every future exhibition to adopt some system of bulletin, whereby the several awards be promptly, and correctly displayed with details of all other necessary information, so important and so dear to the average daily newspaper reporter. I feel convinced that some such method would relieve the officers of the society of much embarrassment, which has heretofore been considerable of an interference with their duties. H. E. CHITTY.

Tying up Carnations.

Have just read Mr. Chitty's article on tying up carnations. My method of tying up carnations is something like this: A bed 8 feet wide will take 8 to 12 plants; put a stake on the outside of the first plant and one between each plant across the bed and one on the outside of the last plant; take 3 or 4 ply cotton wrapping yarn, tie it to the first stake 6 inches above the soil, run it round on one side the first plant to the next stake, wrap round once or twice, and then to the next, and so on until the outside stake at the end of the row is reached, then round on the opposite side in the same way until you get back to where you commenced. Then run another string 6 inches above the first, and then a third. Leave the strings rather loose and floppy, so that when the plant grows larger it will not be cramped. As the plants grow some of the stems will get on the outside of the strings, but they are readily put inside. GEO. W. SCHROYER.

Lancaster, Pa., Nov. 28.

Arranging Plant Decorations.

The sketch presented herewith shows the manner in which Florist J. T. Anthony, of Chicago, makes good use of the pipe plant stand which Mr. Harris uses in his greenhouses. No one who has arranged plant decorations will need to have its usefulness in this work pointed out after a glance at the sketch. There is no longer any necessity to clutter up a house with inverted pots or bulky boxes to "build up" a bank of plants. A number of these iron standards of different lengths fill the bill to a nicety. They are not only neat and clean and more readily placed in position than any other means of bringing up a short plant, but occupy less space and are preferable in every way.

For the benefit of those who may not have seen former references to this stand we would say: they are made of 1 1/4 or 1 1/2-inch wrought iron pipe, cut to the desired length, a thread is cut on each end, and finished by screwing on flanges from 6 to 9 inches in diameter. The cost is slight and they will last a life time. The materials can be purchased of any plumber or gas fitter and can be put together by any one having the tools for cutting the pipe and threading the ends. No florist who supplies plants should be without these useful and inexpensive stands.

Succulents.

BY E. S. MILLER.

(Read before the Society of American Florists, at Boston, August 20, 1893.)

By succulents we mean such plants as agaves, echeverias, cacti, alics, house-leeks and the like that have thick, fleshy leaves.

Florists who grow a general assortment of plants usually handle a few of the more popular kinds, as echeverias (properly called cotyledons), house-leeks, agaves and such others as there is a popular demand for as house or bedding plants, but there are very few florists in the country who make a specialty of cacti and other succulents. The reasons for this are that the plants are unclean and unpleasant to handle, difficult to increase readily, and seemingly there is no demand for them. Now the truth is there is money and big money in this class of plants if rightly handled. In order to make them pay, only the best, most satisfactory and popular kinds should be grown, and, in fact, only those kinds that

we can get up in great quantity at low cost. We can't reckon on getting more than fifty cents for a cactus or other succulent, and it will not pay us to handle anything we cannot produce with good profit at this price. When it comes to clovehearts, house-leeks, mesembryanthemums and the like, we can not hope to get many cents for a plant—on the contrary we expect to dispose of them at colic prices, or less per hundred.

In order to dispose of cacti at all they must be presented to the public in a forcible and popular manner by advertising. We have now some 30,000 cacti and the like in active preparation for next season's trade, and as you all know, if there was not money in them we would not handle them.

Omitting such popular succulents as clovehearts, house-leeks, agaves, sedums, and mesembryanthemums, allow me to call your attention to such other succulents, cacti, etc., as we find in greatest demand, and of which it is easiest to get up a stock, hence the most profitable to handle. These may be divided into four sets, namely: East Indian hemp (sansevieras), Snake Cactuses (cerei), Leaf Cactuses (phyllocacti) and Cushion Cactuses (echinocacti and mamillarias.)

The sansevieras (*Zelanzania* and *cylindrica*) have recently become very popular as house plants, and deservedly so, for they are very easily grown and endure dwelling-house inhospitality with as much impunity as a ficus or an aspidistra; and if properly handled it is very easy to get up a large stock of them. We do this from cuttings of the stem-like leaves, also from cuttings of the roots, and not from division of the old plants as is generally the case. Cuttings should be taken in the spring and early summer, but never in the fall or winter. Cut the leaves in two-inch pieces—laying them all the same way in a flat to dry for a few days. Strike in sand well packed and wet, but afterward water sparingly. They will be well rooted in about a month, when they may be potted in thumb pots. In a month or two young plants will start from the base of the cutting, which may be removed and potted when an inch high, or when rooted.

The cuttings can be potted again and will continue to produce young plants. I have taken a crop of young plants from cuttings a year old—taking as many as nine from each.

The roots can be cut in pieces, one-half to one inch long, and planted in flats of soil, producing fine plants in two or three months.

The cerei, or Snake Cactuses, include the night bloomers (*C. macdonaldii*, *C. floridus*, *Cereus Macdonaldii*, *Cereus nycticalis* and *Cereus triangularis*—also the rat-tailed cactus (*Cereus flagelliformis*). Each and all of them are propagated by cuttings of the stems in the following manner: Taking old plants for stock, cut the stems in pieces three inches long, allowing them to dry until the ends are well calloused—the time required depends upon the time of year and age of the cuttings, longer in winter and with old wood, unless the young wood be much dried before cutting. Strike the same as sansevieras. They will root in from three to six weeks. Pot in thumb pots, withhold water a week or more, or until root action takes place. We now have stock plants from which can be taken successive crops of cuttings, which will make fine saleable plants. They will produce cuttings from the tubercles, or clusters of spines, until they are exhausted or destroyed by cutting, when

they will begin to throw up suckers from the root. Cuttings should be taken off with a sharp knife, never broken off.

The leaf cactuses (phyllocacti) include that very popular species, *Phyllocactus latifolius*, which is often called Night Blooming Cereus, and has broad flat leaves. It also includes the crimson-flowered *Phyllocactus Ackermanni*, the lovely creamy yellow *Phyllocactus crenatus*, and the pink *Phyllocactus speciosus*. All of these are readily propagated from short cuttings of the leaf-like stems. Make them about two or three inches long. The flat stems may be split lengthwise through the centre of the mid-rib, or woody axis. Every piece will produce a good seedling plant in a year's time if care is taken to have an eye, or notch, on each piece. Having made the cuttings, treat them in the same manner as cereus cuttings.

ARRANGING PLANT DECORATIONS

The cushion cactuses include *echinopsis*, *mamillaria*, *echinocactus*, etc. The *echinopsis* are very desirable on account of their large, fragrant flowers. They are best increased by rooting the offsets which are freely produced. *Mamillarias*, *echinocacti*, etc., can be increased in various ways, but all processes are too slow to be remunerative to the florist. We never attempt to propagate them, for it would not pay us. We simply get them collected for us in their native wilds, and shipped to us in cases packed dry with hay. They usually arrive in good order. The best time to get them is in the late fall, after growth has ceased, but never or early spring. If received in fall or winter they may be left in any warm dry place, in baskets or flats, for three or four weeks without injury, but they should not be allowed to get too dry. To prevent this, place them closely in flats of soil which have a goodly proportion of sand in them, keeping them quite dry until growth starts, when they should be watered once a week. If received in spring, they should be put in flats of soil at once. In planting, cut away all decayed parts and broken or dead roots. We get them from Arizona, New Mexico, Texas and Mexico.

The following varieties are very satisfactory to handle, and give satisfaction to customers.

Mamillaria appplanata, *Mamillaria micromeris*, *Mamillaria Grahami*, *Mamillaria Williamsi*, *Mamillaria lasiocoma*, *Mamillaria ussila*, *Echinocereus pectinatus*, *Echinocereus candelaris*, *Echinocactus parvicornis*, *Echinocactus texensis*.

Echinocactus Simpsoni, *Echinocactus horizontalis*, and *Echinocactus setispinus*.

Cushion cactuses should never be planted outside, unless in frames where they can be covered with sash at night and during wet weather, as the rain beating the soil on them causes them to rust, from which disfigurement they will never recover. They are best kept in flats in the greenhouse without shade, where they will grow and bloom profusely, and seem to thrive in the ordinary summer temperature. In winter they should be kept drier, but not dust dry all winter, as is often recommended. The amount of moisture required will depend upon the temperature. They should be kept in the brightest possible light in the temperature of 55° to 65°.

All cacti require to be kept rather dry in winter, to ripen the wood, though young plants of all sorts should not be allowed to dry out. They also require a higher temperature than old plants. *Phyllocacti* and *cerei* should be grown in good soil, and not started on a compost of sand, broken pots, brick rubbish and lime, or old walls, as is frequently recommended. We use the same soil, with the addition of a little sand, that we use for other greenhouse plants with very good success. Watering should never be done on a cloudy day, no matter how dry the plants may be. Care should be exercised in giving water overhead, for some cacti, such as the *anhalonium* section of *mamillaria*, are so formed that if water stands between the tubercles it will cause them to decay. It is essential to success that houses where cacti are grown should be tight, so they get no drip. For this reason alone they should not be grown under the benches.

Cacti are not free from the attacks of insects. Thrips, mealy-bug and scale are the worst. Thrips may be held in check by the use of tobacco fumigation, syringing with a weak solution of kerosene dust, or tobacco-dust on them after syringing them with water. Mealy-bug can be removed with a toothpick, stiff brush, or killed by application of pure alcohol with an atomizer. Scale may be removed with a stiff brush from all smooth varieties, but some *echinocacti* and *opuntias*, owing to the numerous spines are difficult to clean. If badly infested it is best to throw them away to prevent spreading the pests.

The best manner of shipping cacti is to pack them in dry hay or excelsior, first wrapping each specimen in paper to prevent the packing from getting in among the spines. A very little moss should be used (and not quite dry) about the roots of *cerei* and other strong rooting sorts. Those having long spines should have plenty of packing to prevent the spines from injuring other plants.

We have here endeavored to present a few hints regarding the propagation and the interesting class of plants gathered from a limited experience, our fair measure of success being our excuse.

SAN FRANCISCO.—Thirteen new members were elected to the California State Floral Society at the meeting November 14, and nine certificates of life membership were given out. A report on the recent chrysanthemum show was to the effect that the receipts would more than pay the expenses. At the next meeting a vote will be taken on a state flower. The escholtzia or California poppy is strongly advocated. The *Romneya Coulteri* is also suggested.

OBITUARY.

RICHARD PRITCHARD.—In the death of Mr. R. Pritchard from typhoid fever at Cincinnati, November 11, the trade has lost a man who had in his calling few equals and no superiors.

Born in Wales, raised from early childhood among growers and gardeners, taught by his father who was himself a gardener, living as one may say in an atmosphere of plants and flowers, he acquired such thorough training in the practice of his trade as is, nowadays, rarely to be met with. Later he worked at Bull's, Veitch's and with Wills in London, and was head gardener at some of the noted private places in England and Wales. After spending three years in Buenos Ayres with a married sister he came to this country some eight years since, and although owing to his modesty he was little known except to those who had the fortune to meet him, he was acknowledged by all who did know him and his work to be without a superior. He had worked as head gardener to Tilden at Greystone, and as foreman for Jordan, Gasser, Evans, Hill and others. As grower to Evans at Columbus, Ohio, during the Centennial, he entered for fifty-five premiums in plants and flowers and took fifty-four first premiums and one second.

Loving his plants he loved to care for them and grow them and to part with them was to him like parting from dear friends. At the time of his death he was foreman at the Oakley Rose Houses, and being single and without kin or in this country he was laid to rest in Spring Grove by friends in his profession and well remembered by the flowers he so dearly loved. M.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XX.

FIDUCIARY CAPACITY.

Want me to take a walk through your nursery, do you? Really I take no interest in fruit than I do in fruit trees, although I suppose it's all a matter of education. It's a well known fact that no cook can enjoy his own dinner and no doubt you care little for the product of these trees which you have so carefully grafted. Had trouble with a purchaser, have you? Well, state the case. You delivered, you say, fifty dwarf pear trees to old Tom Grigham whom you empowered to make an exchange with you and to turn him for an equal number of grafted apple trees, and in the event of his being unable to do so to make sale of them for the best figure he could get.

Tom slaughtered them. He slaughtered everything from his own health to his neighbor's peace and quiet.

No, you have no redress. You must always bear in mind that a general clause includes a particular one. Had you stood by your specific instructions all would have been plain sailing, but you were too anxious to realize.

If a man is bold enough to repose full confidence in another the law requires that man to accept the acts of his agents as his own. Such a delegated authority is in the nature of a trust. It is what we call in the law acting in a "fiduciary" capacity. Scarcely a day goes by that a business man is not called upon to select some one to act for him in a fiduciary capacity. I understand your position exactly. You had had some trouble with this concern and knew you couldn't sell

them personally, so you let old Tom Grigham into your confidence and lent him your shoes, so to speak.

Now you can't expect the law to permit you to trust and distrust a man at one and the same time, to blow hot and cold just as your humor or rather your pocket may prompt. The business relations of life continually call for these "fiduciary" relations. Indeed no business could be transacted without them. A dealer must have his agents, factors, brokers, bankers, commission men, etc.; a dead man must have his executor or administrator, a child must have his guardian, a lunatic his committee, a client his attorney. You may raise seeds enough for ten thousand people, but you can't find time to go about and sell them. Hence it becomes necessary for you to make choice of certain of your fellow men to act for you, just as you did in the case of old Tom Grigham.

True, as you say, there are two sides to this question, and the person whom you thus implicitly trust must accept the trust in a very solemn spirit; he must undertake the obligation with a full sense of its importance, he has not created the property, he has in fact but a small interest in it. Were it not for your labor he might starve to death, for possibly he may be lame or infirm of body.

Now when a man acts for another in a "fiduciary" capacity he must adhere to specific instructions, but the trouble is as you have found, that it is very difficult to lay down cast iron directions; much must be left to the man's discretion, and herein lies the danger of this business relation. But bear in mind that having once created this relation the law will not allow you to change it into a business relation of another kind.

For instance, you deliver fifty dollars worth of cut flowers to some friend who assures you that he has a "pull" some where and that he can sell them when you couldn't, the law will not allow you to arrest him for larceny if he disposes of the flowers and puts the money into his pocket.

It is simply a breach of trust and not a taking of your property with an intent to steal. You confide the property to his care and custody, and having created this fiduciary relation you must stand by it.

Yes you may cause his arrest in some states on what we call a "civil process." The general rule is that when you place your property in the hands of another person the legal inference is that you empower him to do with it as if it were his own, of course in the absence, mark we, of specific instructions and specific written instructions. If you part with your house under a lease your tenant is constrained to keep within the relation of landlord and tenant, or if you hire your horse to another he must use the animal mercifully as a reasonable man would do. But if you give me a note endorsed in blank by you I may make any use of that note which the law would allow you to do; proper to innocent third parties you would not be allowed to set up that I had given nothing for the note or that you had merely entrusted it to me for collection. Now you will perceive that this "fiduciary" relation may arise even without any word written or spoken that it be implied. For example, you send a thousand dahlia bulbs to a commission dealer, the mere fact of the receipt of the merchandise is all that is needed. But you may say, suppose he is not willing to attempt to dispose of the property for you? Then he must at once notify you of such fact. He is not obliged

to return the goods to you, but merely to notify you that they await your order.

Yes, you are right, it does frequently happen that this so-called "fiduciary" relation arises without your knowledge or consent and yet you must, in a certain sense, accept it. For instance, suppose a rich customer orders a bill of valuable plants of you, pays you well, say \$500, and goes away to Europe, but you upon attempting to execute the order can only fill one half of it. Now you see here's a fiduciary relation to the other \$250. The law exacts that you take the same care of that money as if it were your own, nay, in fact better care of it, and such a trust passes to your assignee if you fail, and to your executor if you die.

You ask me how it would be if stolen property comes into a man's possession and he in good faith pays value for it? The money would be lost. No one can get a title to stolen property except by sale and delivery or gift and delivery from the rightful owner.

You as a business man must of course frequently find yourself obliged to create this fiduciary relation, but I would advise you to be on your guard how you accept such a trust yourself. All trusts, great and small, are full of vexation and bother and the world has no right to expect a business man to load himself down with obligations outside of his legitimate business. I don't say, accept no such trust at all, for selfishness is a bad thing and the good best buys in a noble and glorious spirit: "Bear ye one another's burdens."

— E. C. BLACKSTONE.

SITUATIONS, WANTS, FORSALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. No insertion for less than one week. Plant ads not admitted under this head.

SITUATION WANTED.—By a first class florist for cut flower work. Good reference. Address W. care Pennock Bros, 1414 Chestnut St., Phila.

SITUATION WANTED.—By a good gardener and florist. References with the best. References to private or commercial. Address H. care American Florist.

SITUATION WANTED.—By a thorough practical gardener and florist, as manager or propagator or to work on interest in the business. Single, German addressed, 25 years experience. Good place. Address A. T. M. American Florist.

SITUATION WANTED.—By an experienced gardener and florist, wood grower of palms, ferns, roses, carnations and early forcing. I have lilacs, bulbs, etc. Private or commercial. Best of reference. Address C. H. care American Florist.

WANTED.—To go as working partner in an established nursery business. I have 18 years' practical experience in the trade and some money. Address R. care American Florist.

WANTED.—A competent and experienced florist, single, sober, and middle aged, and one who will take charge of two greenhouses, eight miles from Cincinnati, on agreeable terms. Address J. care American Florist, Bridgeport, O.

WANTED.—Assistant, Roses, carnations, bulbs bedding plants. Must be active and possess good business qualities. Experience in bedding (at request). State age, wages expected, last place of employment. Address JOHN REX R. Bridgeport, Conn.

FOR SALE.—Florist business, thoroughly equipped and stocked. Doing a fine business at home and abroad. In a growing district. Good location, good reasons. A good investment. Four houses. The best for sale in the city. The property is worth \$1000. Address BARGAIN, care Am. Florist.

FOR SALE.—A florist establishment, one greenhouse 50x15 and two 50x10 feet each, heated by hot water. Weathered and well built. Good stand of wood and pasture, plenty fruit; dwelling house, barn and other outbuildings; good well and cistern. All buildings new and in good order. One hour from New York City and one mile from depot. Price, \$4,000 or will sell the greenhouse property separate for \$2,000. Address P. O. Box 103, Hanseys, N. J.

WANTED.

Vegetable gardener of experience, capable of managing garden of 25 acres. Single man preferred, but would not object to married man if he has no children.

Position ready Feb. 1st, 1891. Address with references, H. J. BROOKS, Supt Illinois Northern Hospital for the Insane, ELLICOTT, ILL.

TRADE DISPLAYS

How shall the retail florist advertise? How may he most effectively and economically bring his goods to the attention of the public, and especially that portion of the public who are most likely to become purchasers? There may be better ways than the trade displays which many of the more enterprising florists are now annually or semi-annually making at convenient seasons, but we doubt it. A really good display, including illustrations of all the latest developments in the trade, and sufficiently well advertised in the local press to bring to you as interested spectators a large number of possible buyers, or those who may become buyers if their natural love for the beautiful in nature is developed, can not fail to be very beneficial to your business, and in time return dollars for the dimes expended. Like most advertising it is in the nature of an investment, and the full benefit will not be at once returned, but in the course of time it will come. And like other advertising it may be overdone, more time may be used and expense incurred than is warranted by the possible return from the field from which you draw your trade. But suited to the circumstances, we doubt if there is a more effective and economical advertisement for the retail florist than a good trade display at a time when there is an abundance of good material at command.

In this connection we give a few descriptive notes of the trade display recently made by florist Harry Chaapel, of Williamsport, Pa.

Mr. Chaapel has adjoining and connected with his store four of his greenhouses, each 70x22, the walks in which are 3 feet wide and cemented. In these were placed in masses of color all the best plants of chrysanthemums on the place, palms being effectively placed through the houses to give a foliage contrast. The greenhouses as well as the store were all brilliantly lighted by electric light in the evening.

Mr. C. writes: "In the store the side walls, ceilings, stair case and chandeliers were artistically trimmed with the southern wild smilax and in connection with the heavier greens used the effect was very pleasing; its lasting qualities are as good or better than ground pine or laurel.

"A large canopy trimmed with white chrysanthemums with a ball of the same flowers suspended hung in a recess of the room surrounded with long needle pines and other tropical foliage. A small stand stood under the canopy bearing a bouquet of Bride roses and lily of the valley tied with wide satin ribbon, the whole illumined by a massive piano lamp with colored shade.

"Some handsome vases and baskets of

orchids, Beauty roses and other choice flowers were shown, with some fine specimen plants, in Leeksware vases, of cocos, arecas, Pandanus Veitchii, etc. On a shelf or mantel above these hung a large oil painting, appropriately draped with wild smilax, which added greatly to the general effect.

"Choice varieties of chrysanthemums in pots were grouped on a table opposite, with palms and tall needle pines as a background; in front were great bowls of cut blooms of chrysanthemums, and near the center under a glowing light were placed two handsome flat baskets filled with selected blooms of chrysanthemums.

"When these exhibitions are held at a place of business under favorable circumstances the writer would suggest that an admission fee of say 25 cents be charged, the ticket or coupon being accepted at its face value for cut flowers, plants, etc.; this would serve the double purpose of distributing your flowers and keeping the general attendance within bounds.

"The first night our best people came in large numbers and the attendance increased each evening."

The illustration, engraved from a group of photographs taken during the display, will give a better idea of the effects created than any further description. And we included in the group the photograph of the front of the store as the style of the building may be a useful suggestion to others.

ROOM DECORATIONS.—Of late these have been a very popular feature at exhibitions and they are certainly of value to the trade in making known to the general public the possibilities of the florist's art in this direction. But it seems that ideas vary as to what constitutes a room decoration. One florist recently entered in competition and his room was not only unpapered but unfurnished, and the question has arisen as to whether such can be properly called a room decoration, when placed in competition with rooms which are furnished as well as decorated, and in such condition as is usual when the florist has finished his work at a residence, for in the usual room decoration the furniture is not removed. We should like a discussion upon this point for the benefit of future competitors.

THE DIRECTOR of the Missouri Botanical Garden has issued a second announcement regarding garden pupils to be educated according to the provisions of the will of the late Henry Shaw. Two scholarships are to be awarded by the Director prior to the first of April next. Applications for scholarships, to receive consideration, must be in the hands of the Director not later than March 1. Any young florist desiring to receive the benefit of the thorough and practical education as a gardener provided for by the beneficence of the late Henry Shaw should send to the Director for the explanatory pamphlet. Address Prof. William Trelease, Director of the Missouri Botanical Garden, St. Louis, Mo.

WE HAVE before made mention of the fact that there are many books of great interest and value to the young florist and gardener in the public libraries of the larger cities, and as we believe that these can be made a decided factor in securing to those who are disposed to work for it, a higher education, we shall from time to time publish in these columns lists of the books on subjects bearing upon the pro-

fession, which are to be found in the various libraries, and which every citizen may enjoy without money and without price. The wise youth will take advantage of the opportunities that are within his reach.

TWO VERY handsome white chrysanthemum flowers were some weeks ago received from Mr. Mansfield Milton, Youngstown, O., who states they were cut from a sport from the yellow *Gloriosum*, occurring with Mr. A. N. Kay of that city two years ago. It is certainly a pretty bloom. Mr. Mansfield esteems it greatly as an early free blooming white sort.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN POTTIER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1897.

MR. CHAS. P. BRASLAN, who has just returned from a trip to Boston, New York and Philadelphia, reports a general hopeful feeling in the trade. Demand for peas far in excess of supply. Little is known or thought of United Seed Co.

Ohio Law on Old Accounts.

In Letters of Advice, etc., in November 27 issue, Uncle Blackstone has fallen into an error as regards law in Ohio. The statute of limitations on open accounts is six years, and on notes fifteen years, but you cannot run an account and keep it fresh for ten or twelve years in this state. A debtor may refuse to pay for all items of more than six years' standing, but if sued and no objection is entered, judgment will be rendered for the full account. A small payment does not revive the whole account for six years.

Massillon, O. W. J. OBERLIN.

Catalogues Received.

James M. Thornburn & Co., New York, trade list seeds; Lenault Huet, Ussy France, nursery stock; George Vestal, Little Rock, Ark., nursery stock; Elie Lambert, Lyon, France, roses; Roustan Servan & Co., St-Remy-de-Provence, France, seeds; D. B. Woodruff, Macon, Ga., plants and bulbs; Beach & Co., Richmond, Ind., verbenas; Beney, Lemaud & Musset, Lyon, France, seeds; Harry Chapeau, Williamsport, Pa., Christmas greens and floral arrangements; Frederick Mau, South Orange, N. J., orchids; John E. Box, Croydon, England, seeds and bulbs; Jacques Rolland, Nimes, France, seeds; F. Barteldes & Co., Lawrence, Kans., seeds; H. G. Faust & Co., Philadelphia, Pa., seeds.

ONE OF THE exhibits of chrysanthemum plants at the Boston show was arranged by an artist, that the most artistic combinations of form and color might be secured. And a Boston Daily suggests the propriety of other exhibitors following the example set.

DO NOT FORGET that the AMERICAN FLORIST covers the whole trade. An advertisement in these columns goes to every possible wholesale buyer of florists' goods in America.

— ORIGINAL AND LARGEST GROWERS OF —

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

— BULBS NOW READY FOR DELIVERY. —

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, of a crop of Liliium Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fills in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that Liliium Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— **HALF A MILLION BULBS.** —

Be sure you get the genuine Liliium Harrisii. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant L. Longiflorum in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing; and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand: "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Hot Water Under Pressure.

Will some of the practical hot water men please inform me through your valuable paper what advantage there is in high pressure hot water heating. I wish to know the scientific point involved.

It is claimed that by having the water under pressure it will circulate more rapidly. Now I wish to know what pressure has to do with circulation of hot water in boilers and pipes for radiating purposes. When the boiler and pipes are filled with water and the pressure put on it is equal on flow and return pipes, and I fail to see how this pressure will assist the cold water in returning to the boiler. I have been working with hot water for about 24 years, during this time have had a number of boilers and many miles of hot water piping under my charge, and I have always understood that water circulated by gravity, that is, cold water being so much heavier than hot it always forces its way to the bottom.

During the last 15 years I have been a believer in overhead heating and have had it put up in several houses. Now if pressure had anything to do with circulating the water how is it that the water always works so much better in the overhead pipes than it does in the pipes under the benches?

By heating the pipes overhead there is always a pressure under the benches, and according to pressure theory those pipes under the benches ought to work much better than the pipes overhead, but this is not so.

Three years ago I put a little coil boiler in my five-roomed dwelling house and heated the rooms with hot water, using 1½-inch steam pipe, that is giving me great satisfaction, and in this I have another illustration of the pressure system.

My coil boiler is erected in the cellar and from the boiler have two upright stand pipes 1½ inches each, flow and return, on these I have two Ts, one on each pipe to heat the lower rooms. Immediately above the T on the flow pipe I have a globe valve, this is to regulate the upper story, and I find that if I open this valve about one third of a round it is sufficient for the upper part of the house and it opened more than this it will take all the heat to the upper story.

The pipes in the upper story are about 10 feet higher than those in the lower story; this would give the lower pipes nearly eight pounds pressure, but still the upper pipes work much better and would take all the heat from the lower ones if there were no valve to stop it from going up.

Would like to get other opinions on the subject. H.

OPEN LETTER TO FLORISTS.

Something

For Amateurs to Read.
For you to Profit By.

My Dear Sir:

The more interest your local customers take in the culture of plants, indoors and outdoors, the more will your trade increase.

Sell them the "best" in garden literature, just as you do in plants, and your trade is secure.

We have sent you a copy of the Christmas Garden (if not received ask for another). Look it over carefully, and

we know you will say it is easily the "best" gardening magazine in the world.

The price is \$2.00 a year. If you will act as our agent we will send you posters and circulars for, and allow you 75 cts. commission on each subscription you send us. To get this price (\$1.25 net), send us two subscriptions on your first order.

Copies of that "Window Gardening" supplement with your card on margin in red ink, for \$2.00 per hundred copies, (less than half cost).

Yours sincerely,

THE RURAL PUBLISHING CO.—E. H. L.

Time Building, NEW YORK.

THE AMERICAN GARDEN is a magazine for all who love nature, flowers, fruits and gardens. it is bright, energetic, useful. Many new features will be introduced in 1891, we can name only a few here:

AUTOMATIC GREENHOUSES: that is, automatic heating and ventilation—our inventions, which have been given to the public gratis—will have further experimenting in capable hands.

COLORÉD PLATES, beginning with a superb 15-color plate of seedling Begonias in January, will be a striking feature of the year.

JAPANESE EDIBLE PLANTS. Running through the year, by Prof. C. C. GEORGEON, for three years in the Imperial College at Tokio. The most important contribution ever made to our knowledge of Japanese horticulture.

FRUITS AND PLANTS FOR THE COLD NORTH.

NEW AND INTERESTING FLOWERS AND PLANTS in Kew and other parts of Europe.

FRUITS AND VEGETABLES UNDER GLASS.

NEW VARIETIES IN FLOWERS, FRUITS AND VEGETABLES. We now publish more portraits of plants than any other journal in the world.

HORTICULTURE UPON THE PACIFIC SLOPE.

LANDSCAPE GARDENING, in many features, will be prominent for 1891.

HORTICULTURE IN THE SOUTH. Comprising the latest features in fruits, vegetables, ornamentals, and artistic gardening, by well-known specialists.

RARE ORCHIDS AND TROPICAL PLANTS.

GREENHOUSE PLANTS AND MANAGEMENT.

NOTES FROM A GARDEN HERBARIUM. Making plain the confused botany of cultivated plants.

Terms to Subscribers: One Year, \$2.00; Six Months, \$1.00; Three Months, 50 Cents.

THE RURAL PUBLISHING CO., TIMES BUILDING, NEW YORK.

IN CLUB with the AMERICAN FLORIST, both ONE YEAR, \$2.50.

Utica, N. Y.

The show of the Utica Florist Club, which closed Saturday evening, November 22, took well with the flower loving public, and as an experiment has demonstrated the fact that the club will have the support and encouragement of the people in any enterprise of the kind they may undertake in the future. Oneida Hall was far too small for the display that was made, but taken all in all the arrangement of the plants and flowers was good. Among the principal exhibitors who showed extra good taste in the arrangement of their exhibits might be mentioned: Baker with a tastefully set mantel and general assortment; Crowe with a window awning of smilax, designs and bridal bouquets; Mathews, orchids and foliage plants; Seitzer, chrysanthemums, palms, etc.; Chatfield, general assortment; Bigelow, nurseryman, a fine display of fruit; last, but not least, Pres. Jonathan A., the committee of arrangements and balance of the club showed new and second hand Derby hats, which were worn continuously during the show. Room for improvement gentlemen.

There is some talk of a spring exhibition; this, however, will hardly materialize, as the fall show is now a fixed fact for the future, and two shows in one year would be overdoing the business. Next fall the club will offer premiums which will put the members on their mettle and will be a step in the right direction. LLEW GAD.

The Phyllocactus.

I have in my conservatory a plant of the phyllocactus (night blooming) which is now bearing its third crop of bloom since April last. During the month of May it produced nineteen blooms, eleven of which opened in one night. The blooms were six inches in diameter and perfectly white. In August following it put forth eleven blooms, six of which were out at one time, and at present it has the third crop of buds, seven in all, which are maturing rapidly. The plant stood in the conservatory all season and was not moved. It is a large plant grown from a single stem and is about six feet high. The frequent blooms produced by this plant is novel here, and as it may be new to others I submit the statement.

MR. JOHN THORPE was confined to his bed several days last week as a result of overwork during the exhibition at Madison Square Garden, New York, but is now able to be out again.

SEND in your observations on the management of exhibitions, with suggestions for the improvement of existing methods. We trust there will be a full discussion upon this interesting topic.

Experiments in Chrysanthemum Culture.

BY MR. H. BRISCOE-IRONSIDE

[Read at the English National Chrysanthemum Society's Conference November 11 and 12, 1890, and printed in the London Journal of Horticulture.]

The text of my paper affords, as you will observe, considerable latitude, of which I propose to take full advantage. There exists among us a considerable divergence of opinion as to the cultivation of our favorite flower, and it seems to me that on this point we are never likely to agree fully. The varied conditions under which we work, such as those of aspect, soil, water, etc., must so considerably affect the growth as to render results, attributed to the culture, inconclusive; moreover, we adopt many and dissimilar methods, and nevertheless attain fairly equal achievements—one grower being successful one season, and his opponent the next. Hence, with the view of improving our plants we resort to experiments, and some of my own experiments in this direction I shall now have the honor of briefly describing.

I have pursued various systems of cultivating the chrysanthemum, such as striking in cold and heated frames, and have obtained more satisfactory results when the cuttings have been struck in frames placed in a moderately heated glass house, and removed when rooted to cold frames. I have found deep pots preferable for blooming in, as better drainage can be secured, the plants are safer against saturation during heavy rains and are more easily top dressed.

Last year I experimented with fifty small plants flowered in 32-size pots. They were led with various chemicals and manures, both singly and in combination. To express an opinion on the result is a most difficult task, as I found it impossible to adhere strictly to one chemical or one manure, except in the case of horse manure. I came to the conclusion, however, that half a dozen plants which were successively given liquid horse manure, soot water, Peruvian guano and fish manure, and occasionally carbonate of ammonia, showed the most satisfactory results. I would here mention, more as a curious circumstance than of any practical importance, that in the case of two plants which had occasional waterings of dissolved sugar, greatly diluted, a portion of the sugar reappeared upon the foliage. This I collected and dried and

on tasting it I could detect no alteration. At the same time the leaves on which the sugar appeared changed to a deep red, resembling in color the foliage of an *Ampelopsis Veitchii* in autumn.

I particularly observed the effects of the following forms of ammonia given to plants, viz: sulphate, phosphate, nitrate, muriate and carbonate, and it seemed to me that although the color of the foliage was considerably deepened, especially by carbonate of ammonia, the blooms did not last so long, and the petals were not so crisp nor firm, a condition of things greatly militating against successful exhibition. The first result was most noticeable when the plants were liberally supplied with ammonia during the flowering period. I have found, however, when the buds are fixed and rainy weather sets in, thus preventing the usual waterings for some time, that carbonate of ammonia at the rate of an ounce to three gallons of water, giving half a pint of the mixture to each pot, has maintained a healthy tone in the foliage; nevertheless at such a time when the air is moist and the light limited, I venture to think that it is advisable to avoid as much as possible forcing the growth. The application of carbonate of ammonia produces an almost instantaneous result, which may be readily observed in the following manner: A plant (say Golden Dragon), the foliage of which has a tendency to turn yellow, is selected, one or two leaves removed and placed in water to keep fresh; carbonate of ammonia is now given to the plant and the leaves thereon compared a few hours afterwards with those which were previously cut off, when there will be found a conspicuous difference in their color.

My experience has not led me to consider top-dressings of dry manures advantageous, as it has seemed to me that the surface roots are damaged thereby, and the manurial contents not evenly distributed. As witness of this I daresay that some of you have noticed that after top-dressings of artificial manures have been applied, and suckers immediately under the soil have become soft and pulpy, which in conjunction with the constant pinching of the suckers up to the blooming period has resulted in the formation of a compact, unnatural mass at the most vulnerable part of the plant. I suspect this is a cause for a scarcity of root cuttings later on. We are doubtless all alive to the fact that it is advisable to feed moderately plants having small and thin leaves, and that it is a safe guide to generally consider all such plants as belonging to the category of weak varieties. I have observed that the life of the leaves of this section when fully exposed to the sun's rays has been of comparatively short duration, and that the blooms have been considerably improved when these plants have been placed in a partially shaded position.

Continually watching the foliage has been the most useful guide to me in the cultivation of the chrysanthemum. We know that when the cuttings are rooted a yellow appearance invariably denotes insufficient pot room, and after the plants have been finally potted that a similar condition betokens insufficient nourishment; also that when the midrib of the leaves becomes contracted and the foliage curls a too generous treatment has probably been the cause. This last feature I have frequently observed in cut-back plants, which, as might be expected, will not stand the same amount of feeding as those naturally grown.

One of the most difficult problems in the culture of the chrysanthemum, and that which requires a vast amount of experience, is, I suppose, "the timing of the blooms" for exhibition. The following system has enabled me to exhibit blooms in fairly fresh condition three, and in some cases four, weeks after they have fully developed. Take a plant, the flowers on which are three-fourths expanded, remove it to a dark room or shed, and when a bloom has fully opened cut it off with, say, about 18 inches of stem; immerse immediately in a jar or tumbler of water, and cut off underneath the water about two inches of the stem. I imagine that in this way the air is prevented from penetrating the stem, and hence the access of the water to the bloom is unimpeded. A small quantity of charcoal placed in the water obviates the necessity of continually changing the same. I should mention that I afterwards take off a small piece of the stem, occasionally, this operation being likewise performed under the water.

With regard to mildew, I have found that sulphide of potassium, at the rate of two ounces to a gallon of water, syringed on the plants, has been the most effectual remedy, but when housed I consider dry flowers of sulphur dusted on the foliage preferable. Mildew generally begins during the months of August and September, sometimes in the latter part of July, and I have reasons for concluding that it originates from the varying temperatures for which these months are conspicuous, the days frequently being extremely hot and nights cold and misty. To confirm, in my own mind, my conjecture on this point, I housed half the plants of *Val d'Andorre*, *Triomphe de la Rue des Châlets*, *Meg Merrilies*, and *Mr. Ralph Brockebank*, which are notoriously subject to this disease, at the end of July, the other half being housed at the end of September. No trace of mildew appeared on those first housed, while the others suffered in the usual manner. It will be found on taking two leaves of equal length (they can of course be cut to weigh the same), the one being healthy and the other showing signs of mildew, and burning them separately, that the ash of the former is heavy. This, I imagine, proves that the mildewed leaf contained more liquid matter than the other. It is not inconsistent, therefore, to conclude that defective or checked transpiration is the cause of mildew.

To a similar cause I venture to attribute damping in blooms, as a like result is obtained from the last experiment if blooms be substituted for leaves. The fact of the petals giving off water in the same way as leaves, though, of course, in a smaller degree, must not be overlooked. Damping, I have observed, is generally confined to blooms grown for size, on plants which have lost a great deal of their foliage from a too early ripening. I am inclined to think that overfeeding has

CHRYSANTHEMUM MRS. I. D. SAILER

little or nothing to do with damping, inasmuch as I have experienced from overfeeding exactly the opposite result—viz.: the bud displaying a dry rot, and refusing to develop at all. I suppose a too early ripening of the plants is due to an exposed position, where they have practically no shade and no shelter from the summer sun. I placed some plants so as to be shaded from the sun between the hours of 11 a. m. and 2 p. m. during the months of June and July, and I fed them twice as liberally as those fully exposed. The former when housed were ripened about half way up the stem, and the result appeared to afford weighty testimony to the validity of my conjecture. This was especially noticeable among the weak varieties. Bearing on this point in conclusion, I would draw your attention to the fact that whereas warmer countries easily ripen seed, in which we practically fail, they cannot produce blooms such as those exhibited by the National Chrysanthemum Society.

Various Floral Designs.

We present herewith an engraving of a group of photographs of floral designs. The photographs have been sent us by subscribers in different sections of the country, from time to time, and while each might not be considered worthy of an individual illustration the group occupies but little space and some of our readers may receive a useful suggestion from some one or more of the designs shown.

Chrysanthemum Mrs. I. D. Sailer.

We present herewith an illustration of this chrysanthemum, which took the "Veteran Prize" at the Philadelphia show.

It is an incurved Japanese, delicate pink in color and was raised and exhibited by W. K. Harris. We are indebted to A. Blanc, the Philadelphia engraver, for the use of the cut.

The Chrysanthemum Bee-fly.

In last issue of *AM. FLORIST* I read an article under the head of "Chrysanthemum Bee-fly," written by W. F. Brother W. F. must have taken a dislike to that interesting little insect judging from the names he applies to it ("dirty creatures," "loathsome creatures"). I feel it my duty to speak in its defense. I have not yet found them either dirty or destructive. In the autumn of 1888 I had a good many seedling chrysanthemum plants from seed I bought from a reliable seed house in New York, among them I had about every color known in the chrysanthemum, but every flower was as single as the common field daisy. In the same house I also had some of my named varieties. We had that year vast numbers of the fly. Late in the season I found on Chrysanthemum Mrs. F. Thompson 8 or 10 flowers bearing seed which I saved and sowed in due season. Last year (1889) 80 of them flowered, about one fourth of them were worth a place in any general collection, only one bearing a striking resemblance to the seed parent, 17 were judged as better flowers than

VARIOUS FLORAL DESIGNS.

the well known seed parent. I flowered them again this year, and have now selected eight that stand equal with the best catalogued varieties. In the selection made for next year's flowering there are yellows, red and various shades of pink and no two resemble each other in style of flower or color.

Now, Mr. W. F., I would like to have you tell the readers of the AM. FLORIST of one single instance where the camel hair brush has been as effective in cross-

ing the chrysanthemum as the little insect you speak so disrespectfully of was in the work it did for me.

Mr. A. Veitch of this city wrote an article on the work of the fly on this lot of seedlings mentioned above, which was printed in the July 2, 1890, number of *Forest and Garden*. He also sent specimen of fly to a friend in New York for its name and origin. The reply was probably it is *Meredon bardus*. Soy, its larva is aquatic and may live in the water

tanks about greenhouses. Quoting from *Forest and Garden*: "Dr. John Hamilton of Allegheny, Pa., sent to Mr. J. B. Smith, specimen of the fly for determination. He stated that certain growers of seed had bred this fly, and that the secret of their success was in the fact that by the aid of this insect they secured the most perfect cross fertilization. Dr. Hamilton says further that seedsmen who cultivate this fly are very averse to give any information concerning it." WM. J. ROWE.

The Chrysanthal Etymon.

The appellation "chrysanthemum" was applied by the Greeks to some families of plants whose flowers presented a cross-way arrangement of florets, centuries before the symbolism of the cross had arisen. It seems to have been arbitrarily bestowed upon this plant by its introducers into Europe who may have been influenced by the prestige which its dominant root element conveys in Christian lands. Be this as it may, it is a burdensome word to those who must speak and write it incessantly, but as it has been long accepted, we must follow the sensible rule of philologists in such verbal changes as the exigencies of circumstance are ever suggesting, by retaining the fundamental root symbols to mark derivation and significance. All that is practicable to achieve in this case now is to substitute the two root syllables "chrysanth" as the economic equivalent of the tedious original, "chrysanthemum." We thus gain flexibility, avoid prolixity and all necessity for using the boorish substitute "mum," which is a common English word already appropriated to the buffoon and his low-bred ways, and for that reason inappropriate to this graceful newcomer into the esthetic arena.

The plant then becomes a "chrysanth" (accent on the first syllable); the cultivator a "chrysanthist," and the structure devoted to growing it, a "chrysanthry," etc.

The appeal is made to practical chrysanthists to accept this useful terminology for they are the arbiters in all philologic changes affecting their professional terms, and the motive which urges this interference is that which underlies all intelligent progress, the desire to do what is to be done with the least expenditure of energy, that is consistent with ready intelligibility and gracious phraseology.

CONNECTICUT.

Chrysanthemum Seed.

It would benefit a great many others as well as myself if Mr. John Thorpe or some other expert chrysanthemum grower would tell us how to ripen chrysanthemums so we could grow our own seed. I have about 130 varieties and would like to know what temperature and what special care is necessary to raise seed.

Glens Falls, N. Y.

A. J. BINLEY.

Chrysanthemum Show at Leipzig.

The illustration, which we have reproduced from Moller's *Deutsche Gärtnere Zeitung*, gives a general view of the recent chrysanthemum show at Leipzig, Germany. The general effect of the arrangement is certainly excellent.

Minneapolis.

The Executive Committee will meet at Toronto, Ont., January 13. One of their most important duties will be the preparation of a program for the Convention of 1891, which will take place at Toronto. Members of the society can materially assist the committee in this work by forwarding to the Secretary at any time previous to the meeting any matter or topics which they think worthy of discussion, or of being brought before the Convention in the form of essays. Any suggestions in this line will be thankfully received by the Committee.

WM. I. STEWART, Sec'y.

Chicago.

The new greenhouses at Lincoln Park are nearing completion. Some of the houses are already glazed and a force of men is engaged putting the roofs on the others. There are fourteen houses in all, each about 100 feet long, four having a width of 20 feet and ten a width of 11 feet. The large palm house will not be erected until next summer, though the foundation will be laid soon, stone for the same being already on the ground.

The statue of the bronze geraniums will be unveiled next May. The great bronze figure is already in position and the finishing touches are being added. The great botanist is represented as returning from a collecting expedition. He carries a few flowers in his hand and a book of specimens under his arm. The statue is 14½ feet in height and weighs 9,000 lbs. The total height including pedestal is 39 feet. Around the pedestal will be placed four allegorical figures. The total cost will be about \$25,000. The monument is situated a little northwest of the new greenhouses.

In the park greenhouses Head Gardener Stromback has a batch of chrysanthemums just coming into bloom. They are in 4-inch pots and were propagated last August from trimmings from the regular batch of plants. Among them is a plant of L. Canning bearing five very fair flowers. They are admirable little pot plants and would undoubtedly sell well for house plants, their small size being rather in their favor for this purpose.

The greenhouses are now pretty well filled with bedding stuff potted off in the last month or six weeks. All the cuttings taken from outdoor plants in the fall are in pots except a late batch of lobelia now being potted. The lobelias are for stock to propagate from later on. The young geraniums have already made some growth and as room is scarce workmen are pinching off the large lower leaves to admit light and air and thus keep them from becoming "drawn" while crowded.

The down town florists report trade as very dull. Several say that last week was the poorest known for many years at this season of the year. The quality of the flowers coming in is also below the

CHRYSANTHEMUM SHOW AT LEIPZIG, GERMANY.

average and there is none too much of it even with the poor demand. The falling off in trade is quite remarkable in view of the fact that all during the fall and up to about two weeks ago business was excellent, even better than usual at the season. The florists are anxiously looking for a reawakening. Florists farther away from the business center seem to have had better trade lately than those who are down town.

The demand for American Beauty roses grows apace, but unfortunately there is only a limited number of blooms of good quality coming in at present.

Long stem carnations are in brisk demand, as is usually the case immediately after the close of the chrysanthemum season.

It is now reported that the horticultural department of the World's Columbian Exposition will not be organized until next spring.

The first regular meeting of the Horticultural Society of Chicago will be held early in January.

New York.

Business continues good, but the retailers say the opening of the season lacks the brilliancy of former years. The condition of the financial world cripples our business.

Am. Beauties are coming in very fine and are selling well. Carnations are very plentiful this year and of great variety with Lady Emma, Lizzie McGowan, Grace Wilder and Buttercup in the lead.

Smilax is also plentiful and in good demand. Paper white Narcissus and

Roman hyacinths are coming in in large quantities.

George Irlam has opened a general florist's supply and commission agency at 70 Cortlandt St.

Geo. Stumppis making a special display at his fine store on Madison Ave., the design is a Christmas window the flowers used being all red. In the rear are fine specimens of camellia trees laden with bloom, underneath which are placed rows of poinsettia. Groups of Anthurium Andreanum are banked on both sides, amongst which are placed red globed electric lights; below these are some fine specimen dracaenas flanked by clumps of the "Seabrook Lily" (*Vallota purpurea*); some fine plants of Adiantum Farleyense adorn the center, among which is placed a novel Christmas basket trimmed in red surah filled with anthuriums and poinsettia, the edge being trimmed with English holly berries, with long streamers of cardinal ribbon falling gracefully from the tall handle amongst the flowers. Dainty baskets filled with Lady Emma carnations with their own foliage are dotted here and there among the ferns. Some novel arrangements in the shape of English holly wreaths and crosses tied with large loops of cardinal ribbon hang at the sides and complete one of the finest window exhibitions ever seen here.

Thorley recently displayed a beautiful basket design. It was a French rush basket trimmed with sea green surah and ribbons of the same color, and filled with *Cypripedium insigne* and Giant mignonette with sprays of English ivy arranged around the edge.

John Thorpe intends organizing the

florists here for the purpose of holding a grand and novel floral exhibition early in the spring.

JOHN YOUNG.

Boston.

The chrysanthemums have about come to an end and the rose growers are happy. Their delight at this fact is only equalled by their satisfaction at the near approach of Christmas. The cold weather which has been remarkably steady, considering its earliness, has assisted materially in a gradual advance in prices.

Roses are quoted at a considerable advance over last week's figures. The quality of the general stock has also improved. Violets have already got the shadow of the holidays upon them, and if you don't like the price asked the only answer is, "All right, I'll keep them on the plants till Christmas and they will be bigger blooms."

Dealers in palms and decorative plants report sales very much larger this season than ever before. *Nephrolepis* in two or three varieties and *Ficus elastica* are among the most salable plants for house decorations, and they probably give more general satisfaction for this purpose than any other plant.

Some magnificent clusters of *Luculia gratissima* were shown by Mr. F. L. Harris at Horticultural Hall December 6. This superb plant with its noble foliage and deliciously scented flowers, although an old favorite with the English gardeners is practically unknown here to the public and to the general florist.

The new rose "Waban" was also exhibited at the same time by E. M. Wood

& Co., and the blooms being very large and perfect showed to better advantage than ever before.

The annual supper of the 'Gardeners' and Florists' Club will take place in January. It will probably occur at the Quincey House.

The wife of Mr. J. F. Hansen, the old and well known florist of Winchester, died recently.

Mr. Wm. Robinson and A.C. Bowditch have been added to the plant committee of the Mass. Hort. Society. W. J. S.

Philadelphia.

As a matter of course the florists of Philadelphia could not let such an event as the election of one of their members to the Legislature pass by without making note thereof, and it occurred to them that a complimentary dinner would be about the right thing. On the subject being broached everybody joined in and last Friday evening there gathered about the festive board some 80 odd members of the craft.

The feast was spread in the lower part of Horticultural Hall, the tables being handsomely decorated with plateaus of flowers and the platform was arranged with palms and plants in bloom.

The menu presented had a political smack to it. It is given in full below:

Oysters. Mont. Co. Clams.
Soups.
Consomme a la Kickers.
Purée of Mugwumps.
Fish.
Revenue Suckers. State House Punch.
Quay's Weak Fish.
McKinley's Flounders.
Cold Dishes.
High Tariff Salad. Forre Bill Cold Slaw.
Extract Cold Day.
Republican Claims Mill.
Game.
Political Faro. Free Trade Euchre.
Poker for Revenue Only.
Bungtown Speculation.
Roasts.
Roast Sore Heads.
Candidate Well Roasted (Other fellow).
Ballot Boxes Well Stuffed.
Monopolists' Hayseed Dressing.
Entrees.
No Terrapin on Toast.
"Reed" Birds, Good Count.
Straight Ticket Croquettes.
Harrisburg Entree.
Pastries and Puddings.
Boodle Pie (very rich).

Legislative Pudding.
Farmers' Alliance ("Plum Duff").
Capitol Pie, rose leaves, in "Brunner" and "Luizet" smothered, very fine.

Liquors.
Prohibition Punch.
Old Burton, 13 majority (one of the finest).
Old Bourbon Straight.
Our Favorite, no stickers.
Fruits and Nuts.

"Large Head," served to-morrow morning.
Candidates' Chestnuts.
Broken Promises, etc.

Mr. Burton Craig presided and made a capital address, in which he pointed out a course by which the society can be relieved of nearly \$2,500 a year in taxes, this Mr. Burton will try to see carried out by fathering a bill to exempt the society's property from taxation.

Mr. Burton followed in response and wanted to say that his election was an accident, but then as all really good men are modest, naturally John is also of a

retiring disposition, but it was a case of the office seeking the man and no accident, and the people of his district will always be proud of their choice.

After Mr. Burton's address the evening was given up to fun. There were songs and speeches. Hugh Urquhart played the bag pipes and John Black danced the Highland fling and the sword dance. John Willard played xylophone solos. Master Harry Wright sang a song written for the occasion which was very well received. Daniel Farson's remarks were great, and everybody helped Mr. Lonsdale to sing the Grand Old Duke of York. Robert Kitz gave a little ledger-dance, and others sang and made speeches. Everybody had a good time and the occasion will long be remembered by those who were fortunate enough to be present.

Business has been better the past week and prices are advancing. Roses La France, Mermets, Brides, Albanys, Guilds, 8c; Perles, Gontiers, 4c; Hostes, Cusins, 6c; carnations, \$1.60 per 100; violets, 5c to \$1. There is no good valley about it does not seem to have kept well over the summer, still they ask 8c for it.

There is a good market here for double violets, as any good ones are eagerly bought up on their arrival at the commission houses. One half the violets that come to this market are picked before they are ready. If the growers would only wait until the flowers are fully developed before picking they would sell easier and command better prices. And if growers would stand the stuff that is to be shipped early in the morning, in water over night, it would be fresh and crisp and ready for immediate use. So often it is not cut until morning and generally in a hurry so as not to miss the train and when the store man gets it it has to be put into the ice box for the best part of the day to freshen up. One would think every grower ought to know these things, but they have to be told again and again, some day we hope to see a change for the better.

Mr. Lonsdale's paper on the carnation read before the Florists' Club at their last meeting, was very interesting and instructive. He exhibited cut blooms of about fifty varieties. He has great faith in the future of the carnation.

A. Blanc & Co., the collectors and exporters of cacti are now filling an order for cacti amounting to \$8,000. This firm now has 15,000 feet of glass devoted to succulents. J.

Marketing Cut Flowers.

I have been much pleased with Mr. C. B. W.'s able paper on marketing cut flowers. His plan seems a satisfactory solution to our difficulty in getting what we order and getting the proper returns for our consignments and it might be made to work nicely in the smaller cities. This plan, which for convenience we might call the "Inspector system," would be found much more expensive for the larger cities. The inspector's warehouse would be a tremendous expense and a great drawback on the rapid transaction of business. In short, too great a tax on the trade.

But there is one feature of the inspector plan which I feel sure would be of immense benefit to both growers and dealers. I mean the dividing of roses into first and second quality and culls, carnations into first and second quality, and so on with other flowers when grown extensively.

This could be accomplished by the Florist Clubs in the different cities. A resolution could be adopted by which the

members of the club would bind themselves to try the plan for three months. Then a copy of the resolution could be sent to each commission house in the city with the request that they give the plan a three months' trial. Each commission house would, of course, have its own standard of excellence instead of a common standard as in the "Inspector system," but the dealers would soon learn just about what A or B meant by first class Mermets or Brides and would buy accordingly.

Were this plan adopted and carefully carried out, I feel confident it would remove one great objection to the commission system and would be of great benefit to the commission men and to the growers who consign to them. Speak out, gentlemen. What do you think?

JOHN WELSH YOUNG.

Selaginellas.

Among the three hundred or more varieties included in this interesting family there are many sorts of value to the florist, as nicely grown young plants may be mingled with ferns in the arrangement of small ferneries with very happy effect, and providing the selaginellas have not been grown in too close and hot an atmosphere they will stand such exposure fully as well as some of the ferns now used for the above purpose. Of course it is well understood that there are some varieties of selaginellas that do not flourish unless grown in a hot, moist house, and it is equally well understood that such varieties are of little value to the average florist, as he can seldom make use of them except through an occasional order from amateur establishments where a collection of such plants may be forming.

The few varieties to which reference will be made in these brief notes are not, however, of such character, but are sorts that are easily handled and likely to prove useful, their chief requirements being a light, open soil composed of fibrous peat and sand with small proportion of loam, moderate shade and a temperature of 55° to 60°, in fact just about the same treatment that is accorded ferns that are grown for a similar purpose, with the exception that the soil for the selaginellas is lighter. And as a large ball of earth is frequently a disadvantage (or rather an impossibility) in filling small ferneries, it is advisable that they be grown in as small pots as possible, renewing the stock from time to time by means of division, so that throughout they may be compact and kept in good shape.

The selaginellas are also very effective as exhibition plants, and if a few specimens are required for this purpose the best plan is to put several small plants together in a 12 or 14-inch pan, when the desired result may soon be attained.

The following varieties may with one exception be divided into two classes, caulescent and stemless, the former having stiff upright stems which bear foliage more or less like that of ferns, while the second or decumbent class creep over the surface of the ground and emit roots from almost every joint.

The exception to this classification noted above is *S. Martensii*, this belonging to what is known as the flabellate section, and having creeping stems which produce large strong looking branchlets that are more or less erect in habit.

Among the upright growers *S. Vogelii*, better known as *S. Africana*, is among the best, the stems rising to a height of one foot or more, the general outline of the frond being triangular, and the color

DEUTZIA CANDIDISSIMA FLORE PLENO

(REPRODUCED FROM JOURNAL OF HORTICULTURE.)

dark, glossy green. This is of African origin and has been in cultivation for many years.

S. filicina (or *S. haematodes*) is another remarkably handsome species, which in a large plant frequently produces fronds 18 inches in height, the latter having reddish stems which add much to its beauty.

The name *filicina* seems specially applicable to this species, for it has a decidedly fern-like aspect.

S. Lyallii is also an excellent sort and bears some resemblance to *S. Vogelii*, though having smaller leaflets than the latter and being of a very noticeable shade of dark green.

S. Braunii has very often though incorrectly, been sent out as *S. Wildenowii*, and is doubtless better known under the latter name than under its correct designation.

It is a very useful species of moderate growth, producing dark green fronds of arching habit and from six to fifteen inches long.

This is a very graceful species and the fronds being of firm texture stand exposure well. *S. umbrosa* is another good kind, being of compact habit and making

a very pretty little plant in a 3 or 4-inch pot, and as an exhibition sort has few superiors. *S. umbrosa* produces triangular fronds of bright green color and from six to eighteen inches high.

Among the creeping varieties there are two or three of special utility, and prominent among these are *S. Kraussiana* and its variety *aurea*, both of which are so well known and appreciated that further description seems unnecessary.

S. delicatissima is somewhat similar to the above, but of finer growth and more compact habit.

This grows rapidly and is an excellent sort for carpeting under other plants in decorative work, its good qualities for this purpose being frequently recognized.

S. uncinata (also known as *S. Cesia*) is a very pretty species from China, and of very rapid growth. The peculiar shading of the leaves from dark green to metallic blue gives it a most interesting appearance.

S. Martensii, to which reference has already been made, and its variegated form, are both valuable, but do not need extended description. W. H. TAPLIN.

Deutzias.

These are among the most popular and desirable of hardy ornamental garden shrubs; they are indispensable in the open garden and of much importance to the florist for forcing for winter and spring cut flowers.

The genus is purely Asiatic; some of the species are indigenous to the Himalaya Mountains, and others to China and Japan. Three species only figure conspicuously in our gardens, and these are *crenata*, *gracilis* and *parviflora*, the first two are natives of Japan, and the last named of Northern China. *Deutzia gracilis* is the commonest, and most useful of all, and it is the one generally grown by florists for forcing for cut flowers in winter. Nothing can be simpler than its propagation and cultivation.

Deutzia crenata comes next in importance. While *D. gracilis* is a low-growing, dense, arching bush, *crenata* is an erect, moderately tall mock-orange-like shrub. The flowers of the typical plant are white and slightly tinged with purple on the outside, and the blossoms of the double-flowered form are also white but a good deal tinged with purple on the outside. *Pride of Rochester*, a variety raised by Ellwanger & Barry, is double-flowered, large, early and almost pure white, and *candidissima flore pleno* is a pure white double-flowering form now also common in cultivation. Of all of these, *Pride of Rochester* is, I think the best for forcing.

Deutzia Watereri and *D. Wellsii* are hybrids between *D. gracilis* and *D. crenata*. They are said to bear large pure white flowers in great profusion, and to be valuable desiderata to our garden shrubs. We have fine plants of both but they have not yet bloomed.

Deutzia parviflora, although catalogued by some of our nurserymen for a dozen years, is little known and seldom met with, but it is a handsome species and well worth growing. It is an erect, growing plant, like *crenata*, but not nearly so tall; its flowers are white and borne in corymbs all along the upright stems after the fashion of some spiræas, and it blossoms at the same time as *D. gracilis*.

The following notes from my diary explain the time of flowering:

1890, May 28, *Deutzia gracilis*, at best, or a little past best.

—May 28, *Deutzia parviflora*, in good flower, best.

—May 28, *Deutzia crenata*, none nearly out yet.

—June 13, *Deutzia Pride of Rochester*, at best.

—June 13, *Deutzia crenata*, in good flower.

—June 13, *Deutzia crenata fl. pl. opening*.

It will thus be seen that both *gracilis* and *parviflora* are worth growing for cut flowers for Decoration Day.

There is a good deal of uncertainty about *D. scabra*, *scabra vera*; what is usually sold for *scabra* is simply *crenata*, on the other hand what we have had for the true *scabra* is not the same as *crenata* and it isn't quite hardy.

The *Deutzia Sieboldii* referred to by Mr. Jackson Dawson at the florists' convention at Boston (see *Proceedings*, page 98) as one of the twelve best hardy shrubs for florists' use, is like *D. crenata* but with longer racemes and pure white flowers and was raised from seed sent from Japan to the Arboretum.

My experience has been that the double-flowering varieties of *crenata* are better than the single ones for forcing because they do not drop their blossoms so soon.

Long Island, N. Y.

W. F.

Carnation Notes.

In this part of the country we consider the careful tying up of carnations as absolutely essential to the growth of first class flowers. I use cane stakes and tie up as soon as possible after benching. In four and one half or five inches of soil there is no trouble from the stakes falling over. I do not tie up the flower stems, only the foliage. Most of my varieties have stems that carry the flowers well above the foliage and there is no trouble in picking; a weak, drooping habit is a great objection, still we have some fine varieties with weak stems.

The buds on the side benches sometimes reach the glass; mosquito netting has been successfully used to prevent actual contact. It is stretched between the plants and the glass and tacked to the muntins. The shading does not affect the flowering qualities in the least, in fact it seems to me that carnations do not require so much light as some other plants.

I find it very easy to get seedling carnations which possess one good quality in a marked degree, but when it comes to combining two or more qualities in the same plant, it is not so easy. I have had many purple flowers, some of them very rich in color, but the color is not desirable and I have not kept them. As to a blue carnation, when it comes it will be hard in hand with the blue rose and we will welcome them together.

Mr. Thorpe thinks that within ten years we will have carnations four inches in diameter and bringing a dollar a piece at wholesale. We have three-inch flowers now, so there is only one inch to gain; when I get a four-inch one I will willingly take a dollar a piece for all I can raise.

I make a practice of taking down all my carnations at least once during the season, carefully thinning out the old stems and undergrowth and then tying them up again. It is a tiresome process but it pays where first class flowers are wanted; when quantity rather than quality is called for it would not pay.

Will some one please give the points of a first class carnation from the standpoint of commercial growers. The standard seems to vary somewhat. How large must a flower be to be first class or second class? L. WIGHT.

Framingham, Mass.

Successful Wire Supports.

For years I have used wire to support carnations. In a house 30x30, the straight, upright rows will satisfy the most exacting. The first wire is 6 inches from the ground, with cross supports about 12 feet apart. Separate the varieties according to their habits. I beg to disagree with Mr. Chitty, that wire supports interfere with cutting long-stemmed carnations. Stems 12 inches and over can easily cut. J. L. LOOSE.

Alexandria Va.

"Diseased Callas."

When callas in a warm house are "starting up" or growing luxuriantly, watering with icy water will produce the effect C. B. W. describes, page 234. A.M.

FLORIST for November 27, viz, rotting off next the soil, accompanied with diseased roots.

The best treatment for callas so affected is to keep them somewhat dryer, for some time, watering them sparingly as if starting up the dormant rhizomes. Because this is the condition they are essentially reduced to. They must form new roots and start the season anew. During this period what water is required should be of a temperature pleasantly warm to the hand.

After the callas have started and recovered completely the water used may be cooler, but at no time should its temperature be more than 15° lower than that of the house. If it is not too inconvenient to have it so the water for callas may be 10° warmer than the temperature of the house with great advantage.

New Albany, Ind. ERNEST WALKER.

Ferns for Cutting.

Since such a variety of other foliage has been used for intermixing with cut flowers, ferns have not been so much in demand. The drawback to the use of fern fronds is that they do not, as a rule, last well. Yet, provided the plants are grown under favorable conditions, this objection may be overcome to a considerable extent. In the first place the plants should be grown in a light open position, and sufficiently far apart for air to pass freely between them, and as little artificial heat given them as is necessary for the full development of the fronds. By this treatment the fronds are not only brighter and of a less sombre appearance, but when cut they last much longer. Another point is the selection of sorts. This, of course, depends upon what particular purpose they are required for, and also, to some extent, personal taste. The beautiful though somewhat fragile maidenhair (*Adiantum cuneatum*) will always hold first place, and as now grown by those who supply the market it is of considerably more value than when it used to be grown under heavy shading, a mode of treatment not yet extinct among private growers. A. elegans is another maidenhair which now finds much favor among fern growers. This variety has larger and more spreading fronds than the old favorite. It is also harder and will grow freely during the winter months, where A. cuneatum would remain almost dormant. A. setum may be recommended as one of the best large-fronded adiantums. For some purposes, especially button hole bouquets and sprays, the slender growing A. undulatum is very useful; and the most beautiful of all ferns (A. Farleyense) may be added to the useful adiantums for cutting from.

Among davallias there are several very useful sorts, though perhaps they do not produce their fronds so abundantly as some, yet they have the advantage of being of greater substance, and consequently last longer. When grown in either wire or wooden baskets, suspended from the roof of the fernery, they are pretty and produce a considerable quantity of useful material for cutting from. The most useful sorts are D. elegans, of remarkably free growth; D. Mariess, which succeeds well in a cool house; D. decorata and D. Mooreana, the last named being especially useful where large fronds are wanted. When constantly divided and grown in light sandy compost it produces very pretty medium sized fronds.

Several of the varieties of nephrolepis may be included among those useful for the above purpose, especially the long,

slender-fronded N. pectinata and N. Philippiensis, both of which are very pretty for small vases, etc., while N. exaltata and N. tuberosa are very effective for larger work.

The varieties of P. serrulata are the most valuable of this genus; the lighter crested varieties, which droop over just enough to be graceful, should be grown. The normal form is not nearly so much grown as it deserves to be for this purpose. Where large spreading fronds are required, the Chiswick variety of P. s. major is most effective. The varieties of P. critica are also very useful and last well, but are rather stiffer than the above named. P. tremula when confined to small pots produces fronds which are very serviceable for large vases, &c.

Onychium japonicum should be extensively grown, as the fronds, although finely cut, are of good texture and last well. This fern is also very free growing and is nearly hardy, but to keep up a supply of fronds during the winter it should be grown in an intermediate temperature. To the above many others might be added, which for some purposes would be useful, but for all ordinary uses those mentioned are the best.

To ensure fern fronds lasting well they should be put into water as soon as possible after they are cut, or if they can not be put in at once the ends should be cut off again, for if they get a little dry at the base they can not take up the water freely, and while they last for a considerable time in a cool atmosphere they will shrivel up quickly if exposed to a draught or a dry, warm atmosphere.—F. H., in London Garden.

The Cineraria.

It suits my purpose to grow nearly the whole of my cinerarias from offsets, which are taken from the parent plants any time after midsummer. It is possible to obtain them earlier, but it is not desirable to do so during the warmest part of the year, good flowering specimens being easily grown from offsets put in during August. The earliest offsets are at this late period already in the 8½-inch pots, in which they will flower. The later ones will be finally rooted early in the new year. It is neither essential nor desirable that the compost used should be very rich; and I think that we err in making it so, because rich soil disposes to large, flabby, brittle leaves that snap at a touch and are spoiled. A good potting soil is made with turfy loam five parts, one part coarse white sand, one part leaf mold, and one of rotten manure. This compound is sufficiently rich to produce good stocky growth. The leaves being at the best rather brittle, must be carefully handled when potting the plants, or tying them out. It is an essential part of good culture that the large leaves should be tied out so as to allow air and light to reach the rising flower stems, and this work is best accomplished by tying a piece of tarred or other string around the pots under the rim. The best position for cinerarias until they begin to flower is in a span-roofed pit, where they should be placed quite close to the glass, or at least as near as is safe or convenient. It is of much importance that the plants should be kept free from aphids, which, although they do not injure them much in winter, will show a marvelous increase as soon as warmth increases. A very troublesome parasite on cinerarias at this season is white mildew, which, when unobserved, soon produces a quantity of fine white thready lines upon the under sides of the leaves. To get rid of it, the best thing is

to dust the under sides of the leaves with flowers-of-sulphur. Fumigation with tobacco will destroy aphids, but caution is necessary in its use, as the leaves are very tender, and easily and permanently injured by it, for it should not be forgotten that the foliage is in its own way as beautiful as the flowers, and the latter are never seen to advantage unless the foliage is good.

The nearer cinerarias are to the glass the more likely they are to be injured from frosts, and it may be well to remark that, when sharp frosts set in, the balance must be well and carefully kept between heating the house too much and allowing frosts to injure the leaves near the glass. The temperature may fall 2° or 3° below 40°, but should not rise much above that point. A high night temperature with an over dry atmosphere does not suit the plants, and air should be admitted on all favorable occasions; but not when drying cold winds are blowing, as these cause the leaves to droop, and subsequently to decay. I might say a word about some of the distinct and beautiful varieties exhibited during the past season, but those that received certificates have been described in these pages. None of these varieties have as yet been sent out in the way usual in previous years, and being certificated and described, it may not be worth while to say more here, than that the steady improvements shown in form of flower, and the habits of the plants, have been continued up to the present time. It may be well to remark that good culture has much to do with dwarfness of habit, and general good quality of the plants and flowers.—*J. Douglas, in Gardeners' Chronicle.*

Silver Leaved Geraniums.

At Lincoln Park, Chicago, the bulk of the great number of geraniums grown there, are propagated from cuttings taken in the fall from the plants which have been bedded during the summer, but in the case of silver leaved and bronze geraniums that method has been unsatisfactory. The wood does not become sufficiently ripened in the open to strike well in the bench.

Plants of these sections of the geranium family are lifted in the fall, potted, and kept in the house for four or five weeks, until the wood is ripened. Cuttings are then taken and strike root satisfactorily. If the plants do not supply sufficient cuttings to make the required number of plants, a batch of cuttings may be taken from the young plants. These cuttings will however be very small, so small that they can not be inserted in the sand bed and kept in an upright position, the first watering being almost certain to tip them over or wash them out, and of course the cutting must not be so deeply inserted as to have the sand above the crown or rot will ensue. This difficulty is overcome by head gardener Stromback by a device which we have before illustrated but which will bear reproduction, as it will frequently be of great assistance to every grower of these plants, when he may be short of larger cuttings.

A toothpick is wired to a leaf stem of the cutting and the pick inserted in the sand deep enough to rest the base of the cutting on the surface of the sand, as shown in the sketch. They will root freely in this position. When rooted the cuttings are potted without removing the toothpick, which is taken out later when the plant has become well established in the pot. This wiring must not be tightly done as rot might thus be in-

duced. This little wrinkle renderers available a large number of cuttings which otherwise could not be utilized, and there is rarely a surplus of cuttings of these geraniums.

Relations of Employer and Employee.

I wish to ask a few questions through the columns of the AMERICAN FLORIST, viz.: What are the benefits from boarding with the employer? I shall present my side, "the employee's," of the question as best I can, and do so in the hope that it may have a tendency towards bettering both the employer and employee's position and relations, which I am sorry to say for the latter are in a great many places, especially in the west, if such I may call this state on the Missouri river, anything but mutual.

CUTTING SUPPORTED BY TOOTHPICK.

All tradesmen, mechanics, factory hands and common laborers have a set time to perform their labor in, and as a rule are allowed extra for overtime work performed. With a great many in our trade it is quite different. Ten hours as a rule is considered a day's work, but not with us. The most of our overtime is done gratis to the employer, and right here I wish to ask why at so many florist establishments such is the case? With those that board with their employer in spring time you are often compelled to work 13 hours with the privilege of leaving if you are not satisfied, which I think is not so easily done when you are in a place or city that does not support more than two or three florists, and none within a hundred miles that does. Does it not seem unreasonable on the part of the employer?

The employee that boards elsewhere knows nothing of this; he is not handy and within easy call, but you that set at your employer's table are oftentimes asked without a blush on the part of the employer to perform work after supper and on Sundays that will sum up a week's wages in a month, but you don't get it. You are not allowed a rest near the place. Your only salvation is to roam off somewhere if you wish to feel a little independent and at ease. The man that boards elsewhere performs his day's work and does not return until the next day, starting time. Perhaps you have been at work a half an hour on something that needed immediate attention, at least your employer seemed to think so, and yet the other employee has as much at the end of the month as you have after paying for his board and lodging, and then he has the privilege of boarding where it pleases him, and being independent. He can leave whenever he

does not get his money's worth, but with you it is different, you can not leave unless you leave your position, and to complain as regards meals and lodging would place you in a very embarrassing position with your employer. Does it not seem as if your employer induced you to board with him just because he is thereby enabled to get more work out of you? Yes, many look upon you as that much machinery to be worked to its fullest extent. You may perform your work conscientiously to the best interest of your employer, of this you never are reminded, but when the least thing goes wrong you are growled at for two and three hours at a time. It is a poor recommendation to leave a place on short notice so you remain until you have a chance to better yourself.

But the question that I wish to ask the most directly is what excuses have some or can some florists present for the shameful board they offer the employee, but for which they expect all that I have mentioned as regards overtime gratis and your entire interest as regards the welfare of their business? There are more than a few that will agree with me when I say that the board that some offer you is not worth \$2 per week, and I think that if some of them would venture into the cheap boarding house business they would prove more successful than they are at floristing. I wonder how long some would be contented to sleep in the places and on the beds, if such you may call them, that they offer you for your lodging. It is either a cot in the potting shed or a place in the garret in which they or he places an old bed, a straw bed and pillow, a few torn and dirty quilts, and one sheet which you are compelled to change yourself if you wish to have it clean. This and an old chair constitutes your furniture. As you are supposed to make your toilet under the hydrant you will have to purchase your own wash basin, bowl or pitcher. One towel a week for all the other hands to dry on besides yours if it is hung up in the potting shed. You have to make your own bed and keep it clean if you are so inclined. And yet these same ones are talking of education and good results from employees, say grace at the table and compel you to perform unnecessary work on Sunday.

I wish to say in justice to many florists that the board they give and the lodgings they offer are second to no first class boarding house, and it is such men that deserve the co-operation of the employee and the utmost conscientiousness in performing his duty to the best of his knowledge and towards the success of his employer. No employee will object to perform work for such men, when it is needed and necessary. Men that merit your work and do not ask anything that is way beyond reason. But when a man commences to grind he can never expect good results.

A WORKING HAND.

At the Flower Show.

The New York Evening World of Nov. 28 has the following regarding the flower show:

An amusing story is told of a young lover who thought he would buy a lady slipper (cypripedium) that he fancied would be an acceptable gift to the pretty little lady by his side.

"How much is it?" he asked.

"Seven hundred and eighty dollars," was the reply.

He didn't buy it.

THE AMERICAN FLORIST

Subscription \$1.00 a Year. To Europe, \$2.00.

Advertisements, 10 Cents a Line, Agate;
1 inch, \$1.00; Column, \$14.00.

Florist is for Florists, Seedsmen, and dealers in
plants pertaining to those lines ONLY. Please to
remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure
insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

OUR TRADE DIRECTORY.—We have of late received inquiries about the "directory" for 1891, and in some instances orders for the same. To avoid useless correspondence we would say that it is not our intention to publish an edition of the directory for 1891. We may publish a new list in 1892 or 1893, but certainly not before 1892. While there have of course been some changes from the list as published last spring they are comparatively few in number and are mainly changes in street addresses in the larger cities. We shall soon publish a list of changes and additions in these columns.

WE HAVE received from John Breitmeyer & Sons, Detroit, Mich., a small lithographed calendar for 1891, which is ornamented by a spray of flowers in colors and the firms card on its face, while on the reverse is printed a list of the roses of which they offer cut blooms for sale. The color of each rose is given opposite its name, and the list is classified into "Tea Roses" and "Hybrids." On the margin opposite the list of teas appear the words "September to July" and opposite the hybrids "January to June." It is a neat advertisement and may be a useful suggestion to other retail florists.

MR. PAUL DANA, son of Charles A. Dana of the New York *Star*, has been appointed one of the Park Commissioners of the city of New York. Mr. Paul Dana is a gentleman of vigorous, executive ability, wide travel and fine education. And as he has been brought up in one of the loveliest and most important gardened homes of America and is thoroughly familiar with progressive landscape architecture, sylviculture and floriculture, we question if a happier choice could have been made for the position. We congratulate New York.

THE RECENT exhibition at Madison Square Garden, New York, given by Messrs. Pitcher & Manda, received remarkably liberal notices in the New York daily press. Many of the papers devoted columns of space daily to the show while open, and columns of complimentary notices after its close. And to crown all the show was a decided success financially. It is possible that this successful effort of a single firm in the exhibition will awaken the apparently dormant New York Horticultural Society.

IT SEEMS to be popular now to name new chrysanthemums after daily newspapers. The New York *Tribune* devotes considerable space to a description of a chrysanthemum named "The Tribune" in its honor. Another new chrysanthemum has been named "The Press" as a compliment to the New York *Press*, and

the paper at once responds with an elaborate description of the flower ornamented by a cut of same. There are several ways of touching the hearts of the newspaper men.

FLORA of North America, including ferns. In response to the request made by W. W. we name: Gray's "Manual of Botany" of the eastern and northern states, Chapman's "Flora of the southern United States," "Coulter's Manual of Rocky Mountain Botany," Botany of California (Geographical survey of California. Botany Vol. I and II) by Sereno Watson. Or get Gray's Synoptical Flora. Ivison, Blakeman, Taylor & Co., publishers, New York and Chicago.

MILDEW.—J. B. will find all the latest information regarding mildew in previous issues of the FLORIST. Also descriptions of all known remedies. Sulphur is the most effective preventive, and at this season of the year a wash composed of sulphur and lime wash or sulphur and linseed oil should be applied to the heating pipes.

THE CHRYSANTH.—In another column will be found a communication urging the adoption of "Chrysanth" as the abbreviation of chrysanthemum, rather than "Mum" which has been so frequently used of late that it bids fair to become general among the growers.

A NEW combination in exhibitions is an "Art loan and chrysanthemum fair." Such an exhibition was held at Santa Rosa, Cal., November 18 to 22. A prize was awarded for the finest display of chrysanthemums.

FLORIST H. O. Hinckley, Rockford, Ill., sends us some specimen blooms of the pink carnation Bertha Soper. The blooms are very good. We have before described this variety.

Society of American Florists.

Mr. Robt. J. Halliday, of Baltimore, having sent in his resignation as a member of the Executive Committee, Mr. W. R. Smith, of Washington, has been appointed by President Jordan to serve for Mr. Halliday's unexpired term. President-elect Norton has appointed Mr. Jas. Dean, of Bay Ridge, N. Y., Mr. H. W. Buckbee, Rockford, Ill., and Mr. P. Welch, Boston, as members of the Executive Committee for three years, commencing January 1, 1891, in the place of Messrs. Keller, Reynolds and Calder, whose terms of office have expired.

News Notes.

ROCKFORD, ILL.—The wife of J. J. Soper, the florist, died November 28.

STILLWATER, MINN.—Alfred C. Bentley has added a new house 12x60, heated by steam.

LAKE GENEVA, WIS.—Button Bros. are adding 1,500 feet of glass to their greenhouse plant.

DURING the first and second weeks of November over sixty chrysanthemum shows were held in England.

KALAMAZOO, MICH.—The twentieth annual meeting of the Michigan Horticultural Society was held here Dec. 2 to 4.

PLATTSBURGH, N.Y.—W. J. Hesser has made still further additions to his glass and will add still more the coming spring.

LOUISVILLE, Ky.—F. Walker & Co., are putting the finishing touches on a new house 18½ by 150 feet at their place in New Albany, Ind.

MORRISON, ILL.—Robert Davis & Sons, have been adding to and improving their old greenhouse and have also built a new house making two, each 20x145. Heated by hot water.

MIDDLEBOROUGH, Mass.—Florist C. D. Kingman made an excellent display of chrysanthemums at his greenhouses during November. It was warmly praised by a local paper.

WILMINGTON, DEL.—A. S. Rollo & Son is a new firm of florists not listed in our trade directory. They have greenhouses at the corner of 8th and Clayton streets and a store at 622 King street.

DALLAS, TEX.—M. Phillips has just completed a new greenhouse 80x18 feet, heated with hot water. Business is improving, with plenty of outdoor grown roses of good quality. No frost yet but plenty of rain.

LOS ANGELES, CAL.—The new Floral Society now has a membership of nearly 150. Mrs. Davis has bought the Garey Flower Store. Business is good and has been so all the season. We shall hold our usual rose show in April.

READING, PA.—George W. Bears is a florist who has started since the publication of the trade directory and does not appear in the list. He has a store at 820 North 6th street and greenhouses corner of Spring and Church streets.

PEEKSKILL, N. Y.—Florist E. C. Taylor gave an exhibition of chrysanthemums in a vacant store on Main street November 18 to 20. Some very good plants and flowers were shown. Mr. Taylor gave half the door receipts to a local charity.

ROCHESTER, N. Y.—The Brown Brothers Company was incorporated December 1 with a capital stock of \$100,000, to conduct a general nursery business. The incorporators are Charles J. Brown, Robert C. Brown, John S. Brown and Charles Fisher, Jr., of this city, and Edward C. Morris, of Chicago.

CLEVELAND.—James Eadie's greenhouses on St. Clair street were destroyed by fire last Friday night, causing a loss of \$25,000 with not a cent of insurance. The loss was absolute, for the plants the fire spared were drenched with water and frozen. There were thirteen houses in all. The fire started in the boiler room.

SPRINGFIELD, MASS.—At the recent great football match between Yale and Harvard the admirers of the Yale men wore violets and of the Harvard men, crimson chrysanthemums. The adherents of each collected together and as a local paper expressed it: "On the west was a violet bed and on the east a chrysanthemum show."

The Stephanotis.

The way in which stephanotis blooms depends on the treatment it receives during the growing season. Where exposed to as much light as it is possible to give the plants, with little shading accompanied by a dryish condition of the atmosphere, the bloom is often formed in the autumn. It may be seen in the shape of small spurs at the base of the leaf-stalks for a considerable length from the extremities of the shoots downwards. Plants in this condition can be had in flower early. But the soil, especially where they are grown in pots, should not through the season of rest be kept too dry, otherwise the already formed bloom is liable to go off. In the case of plants that have been grown in a more humid atmosphere, there are seldom any flowers formed on the growth that has been in the autumn, their presence being wholly confined to the young growth that is made after the plants are started in spring. In this case the roots may be kept drier, no more water being given than is necessary to maintain the leaves plump and free from any inclination to flag. The drier they are kept, provided it is not carried so far as to injure the foliage, the sooner flowers may be looked for after the plants are again started.

T. B., in London Garden.

Hail Insurance.

The final test of the stability of the "Florists' Hail Association" was successfully met by the members upon whom an assessment was levied. Their prompt response removed the last doubt of its final success, if any misgivings still lingered in the mind of any "doubting Thomases". It has been conclusively proved during the past three and a half years of its existence that it has been of practical benefit to many, at small cost to its members. The F. H. A. has won its spurs by fair dealing. The directors and others have labored in season and out of season to achieve the success it has attained, and it is their ambition to make it the strongest hail association in the world. It is the duty of every American florist to assist and at the same time benefit himself by so doing. Will you do it?

HILL'S SET

— OF —

CHRYSANTHEMUMS

FOR 1891.

There are so many "pretty good" seedlings in the field this year that it is the easiest matter in the world to make up a "set" and give them descriptions that prove most delightful reading; but what the florists want for '91 is a set, not "pretty good" but absolutely **FIRST RATE**, and with a record behind them that will warrant them premium winners at the next exhibitions; this is what we claim for our new set which cost us over \$1,000, but we got the best!! Read the records of the shows.

WIDENER, EMLER, MRS. SARGENT, JNO. LANE, MOLLY BAWN

AND OTHERS, ALL PRIZE WINNERS WERE DISTRIBUTED
BY US LAST YEAR; THIS YEAR'S ARE PAR EXCELLENCE.

1. FLORA HILL, finest white in existence. Special certificate at Indianapolis.
2. SUGAR LOAF, First Premium at Cincinnati.
3. MRS. ISAAC D. SAILOR, Sailor Prize at Philadelphia.
4. BLACK BEAUTY, Blanc Prize at Philadelphia.
5. JNO. GOODE, the finest cut flower variety we have yet seen.
6. FRANK THOMSON, Certificate of Merit at Indianapolis.
7. MRS. J. G. WHILLDIN, Wailludin Prize at Philadelphia.
8. EMILY DORNER, First Class Certificate at Indianapolis.
9. R. MAITRE, In the set of six seedlings which won the \$100 at Indianapolis.
10. PHILIP BREITMEYER, Splendid yellow of Lincoln type.
11. C. W. DEPAUW, Fluffy pink.
12. ELMER D. SMITH, Immense incurved scarlet maroon.

ALSO A MOST COMPLETE ASSORTMENT OF THE VERY FINEST

Ketter, and others.

H. L. PHELPS, Springfield, Ill.

Flowers by Telegraph.

A circular with a display head reading "Flowers delivered by telegraph" has been received from Mr. C. B. Whitnall of Milwaukee. We append the body of the circular.

"We will deliver flowers fresh and promptly without the aid of express companies in the following cities just as satisfactorily as we do at home.

"No charge for transportation to New York City, Philadelphia, Boston, Albany, Washington, Cleveland, Pittsburgh, Buffalo, Denver, New Orleans, Omaha, San Francisco, Los Angeles, Cincinnati and Detroit. We are prepared to do a local trade in all these cities for the accommodation of our customers who have friends residing or traveling there.

"If you hear of a friend who is taken sick in Philadelphia, give us name of hotel he is at and we will send a bunch of roses as promptly as if he were in the Plankinton House, or if your best friend sails for Europe to-morrow from New York, give us your friend's name, name of boat, etc., and we will have a bunch of violets put in her state room with your card attached, just as easily as if the boat sailed from Milwaukee Bay."

On the margin of the circular sent was written: "Can you detect anything visionary about this?"

No. Can't say that we can. We presume that arrangements have been made with florists in the cities named to fill orders sent by telegraph. It is an adaptation of the system of telegraphic money orders and will certainly prove very convenient to customers at times.

LIZZIE MCGOWAN.

I will be prepared to distribute my **NEW WHITE CARNATION** Feb. 10, 1891, and the price will be \$12 per 100, or \$100 per 1000, for Rooted Cuttings propagated. **STRICTLY HEALTHY PLANTS.** Special discount on large orders.

Cash or its equivalent should accompany orders from unknown correspondents. Send for descriptive circular. Parties wishing a few flowers of this **GRAND Carnation** can have them by enclosing twenty-five cents in stamps.

ADDRESS

JOHN MCGOWAN,
363 Main Street, **ORANGE, N. J.**

Lizzie McGowan.

I beg to announce to the trade that I shall be prepared to distribute this magnificent **NEW WHITE CARNATION** on the 10th of February, 1891, and that the price will be \$12 per 100, and \$100 per 1000, for strong well rooted plants from the cutting bench. Favorable special rates will be allowed on large quantities. Cash or its equivalent should accompany orders from unknown correspondents.

Send for descriptive circular of this and other sorts. Parties wishing a few flowers of Lizzie McGowan can have them by enclosing twenty-five cents in stamps.

ADDRESS

H. E. CHITTY, PATERSON, N. J.

"GOLDEN GATE" CARNATION.

This is by far the finest pure yellow yet produced, a seedling of **HINZE'S WHITE**, fertilized with **FIELD OF GOLD**; having much the character of Hinze's, but more dwarf and early flowering. It is a deep golden yellow, without stripe; healthy and free.

Will book orders for plants to be delivered in February, at \$2.50 per dozen; \$20.00 per 100. Will mail sample blooms on receipt of 15 cents.

CHAS. T. STARR, Avondale, Chester Co., Pa.

CARNATIONS.

New Seedling Carnation "Victor," brilliant scarlet; has no equal of its color; ready for delivery January 1, 1891. Catalogue ready December 30, 1890. Also plants from 2½-inch pots and Rooted Cuttings of "Mrs. Fisher," the leading white.

Also many other varieties.

R. T. LOMBARD,
WAYLAND, MASS.

Rooted Cuttings of Carnations

of all the Standard Varieties ready Dec. 1st.

Having added another 100 foot house to our Carnation Department, hope to be able to furnish any quantity desired, on short notice.

Orders for future delivery at 10 per cent off from catalogue price.

JOS. RENARD, Unionville, Chester Co., Pa.

OPEN LETTER TO FLORISTS.

Something

For Amateurs to Read.
For you to Profit By.

My Dear Sir:

The more interest your local customers take in the culture of plants, indoors and outdoors, the more will your trade increase.

Sell them the "best" in garden literature, just as you do in plants, and your trade is secure.

We have sent you a copy of the Christmas Garden (if not received ask for another). Look it over carefully, and

we know you will say it is easily the "best" gardening magazine in the world.

The price is \$2.00 a year. If you will act as our agent we will send you posters and circulars for, and allow you 75 cts. commission on each subscription you send us. To get this price (\$1.25 net), send us two subscriptions on your first order.

Copies of that "Window Gardening" supplement with your card on margin in red ink, for \$3.00 per hundred copies, (less than half cost).

Yours sincerely,

THE RURAL PUBLISHING CO.—E. H. L.

Time Building, NEW YORK.

THE AMERICAN GARDEN is a magazine for all who love nature, flowers, fruits and gardens. it is bright, energetic, useful. Many new features will be introduced in 1891, we can name only a few here:

AUTOMATIC GREENHOUSES: that is, automatic heating and ventilation—our inventions, which have been given to the public gratis—will have further experimenting in capable hands.

COLORED PLATES, beginning with a superb 15-color plate of seedling Begonias in January, will be a striking feature of the year.

JAPANESE EDIBLE PLANTS. Running through the year, by Prof. C. C. GEORGESEN, for three years in the Imperial College at Tokio. The most important contribution ever made to our knowledge of Japanese horticulture.

FRUITS AND PLANTS FOR THE COLD NORTH.

NEW AND INTERESTING FLOWERS AND PLANTS in Kew and other parts of Europe.

FRUITS AND VEGETABLES UNDER GLASS.

NEW VARIETIES IN FLOWERS, FRUITS AND VEGETABLES. We now publish more portraits of plants than any other journal in the world.

HORTICULTURE UPON THE PACIFIC SLOPE.

LANDSCAPE GARDENING, in many features, will be prominent for 1891.

HORTICULTURE IN THE SOUTH. Comprising the latest features in fruits, vegetables, ornamentals, and artistic gardening, by well-known specialists.

RARE ORCHIDS AND TROPICAL PLANTS.

GREENHOUSE PLANTS AND MANAGEMEMENT.

NOTES FROM A GARDEN HERBARIUM. Making plain the confused botany of cultivated plants.

Terms to Subscribers: One Year, \$2.00; Six Months, \$1.00; Three Months, 50 Cents.

THE RURAL PUBLISHING CO., TIMES BUILDING, NEW YORK.

IN CLUB with the AMERICAN FLORIST, both ONE YEAR, \$2.50.

 Address orders to either office.

Foreign Notes.

AN EXHIBITION of the numerous and diversified articles required in the various branches of horticulture will be held at the Crystal Palace, London, March 3 to 21 next.

THE ENGLISH gardening papers for November 20 and 22 contain lengthy obituary notices of the late Shirley Hibberd, whose death was recorded in the *FLORIST* of November 27. Mr. Hibberd was present at and took a prominent part in the Centenary Festival of the English National Chrysanthemum Society November 13, only three days before his death, reading a very interesting paper on the "Origin of the Florists' Chrysanthemum."

THE TOTAL number of cut flowers staged in competition at the Centenary exhibition of the English National Chrysanthemum Society was 3,837, and there were in all 145 trained specimen plants.

A FIRST CLASS CERTIFICATE was awarded to Berberis Thunbergii at a recent meeting of the Royal Hort. Society of England.

AN ENGLISH newspaper reads the chrysanthemum growers a lecture on "The immorality of flower shows" in "faking" flowers up to a certain standard of perfection, and says that many of the prize flowers are "perfect" to a suspicious degree.

AN international exhibition on a large scale in which horticulture is to play a considerable part is to be held at Palermo, Italy, in March and April next.

DR. JANKA, the botanist, died recently in his fifty-fifth year. He was keeper of the botanical department of the National Hungarian Museum at Buda-Pesth.

A great chrysanthemum show was held in Paris, France, November, 20 to 23.

THE Pomological Society of France held its annual meeting at Limoges September 22.

S. A. F. Attention

Our defeated competitor in "Standard" Flower Pot contest at the Boston meeting, for the **Certificate of Highest Merit**, reflects on the members of the Committee of Award as not being impartial in their decision. The members of that Committee were M. A. Hunt, Terre Haute, Ind., Chas. Henderson, of the firm of Peter Henderson & Co., New York, and Wm. K. Harris, Philadelphia, Pa. No fairer or more competent committee could be selected from the members of the S. A. F., and as far as diligent inquiry reveals, their decision meets with the approval of everyone excepting A. H. Hews & Co.

The official programme gave notice that the Certificate would be awarded to the display "which most nearly approaches the 'Standard,' such display shall consist of not less than one dozen of each size, made from working molds and not turned down." The sheet with drawings of the pots (which was gotten up by A. H. Hews & Co., under the instructions of the Committee of S. A. F. and sent to the different potters for their guidance) shows 17 sizes, and the number we exhibited; one dozen of each, as required. In regard to the statement published by A. H. Hews & Co., that "very many" of our pots were **"either ground, filed, turned or sand-papered to size,"** we wish to distinctly say that this is **FALSE**. The pots we exhibited for the Certificate were made exactly as we make them for our customers, and were not altered in any way whatever; in fact it is impossible to alter the inside measurement after a pot is once made; a mold that will make one pot correct will make any number (until the mold wears out) exactly the same. In reference to the absurd "propositions" of Messrs. A. H. Hews & Co., we decline to be a party to the proposed exhibitions as it would be a gross insult to the honorable gentlemen of the committee, who, after giving their time and labor to the society, are at least entitled to common courtesy.

As the report of the proceedings of the Convention at Boston, Mass., is now published; read carefully the reports of the Committee on Standard Flower Pots on pages 100 and XIV.

THE WHILLDIN POTTERY CO.,
713 & 715 Wharton St., PHILADELPHIA, PA.

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the AMERICAN FLORIST to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN**. We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from 1 $\frac{1}{4}$ -inch to 7-inch inclusive, and 250 pots each from 8-inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

IT IS REPORTED that no less than 239 new varieties of chrysanthemums have been registered this season with the Secretary of the American Chrysanthemum Society.

AS OUR NEXT issue will not reach many of our readers until after Christmas day, we take this opportunity to wish all a merry, busy and profitable Christmas.

Washington.

Palms, ferns and other ornamental foliage plants are very freely used in this city. Numbers are found in nearly every house whose occupants make any claim to social prominence and they are not wanting in many an humble home. The markets and stores are full of the sorts best adapted for house decoration. One of the florists here recently stated that he had some 12,000 plants of this description in his greenhouses, and I should judge he is not the most extensive grower in this locality.

The other day I noted among a lot of decorative plants in Studer's new salesroom on F street a specimen of *Nephrolepis davalloides furcata* with not less than 150 beautiful fronds measuring from three to four feet in length. There was also a fine specimen of *Nephrolepis rufescens triplinatifida* with fronds measuring five feet in length. A plant of *Nephrolepis exaltata* had over 200 fronds from three to five feet in length and a superb specimen of *N. davalloides* was not less than twenty-five feet in circumference and with fronds from five to seven feet in length.

So extensively are decorative plants in demand in this city for use at receptions and similar happenings that wagon loads may be seen passing in the streets almost daily. At a recent dinner it took ten wagon loads of foliage plants for the decorations.

A very pretty effect was achieved the other night by Small at a dinner given by Secretary Tracy to the Brazilian Admiral de Silveira. The table was oval and arranged for only 30 covers. Visitors to the Naval Department always admire in the main corridor two exquisite full rigged models five feet in length of cruisers recently constructed. These beautiful specimens of workmanship were this time charmingly utilized by placing them on stands in the open inner center of the oval table, imbedded as it were in a gently undulating, unbroken mass of light colored maiden hair ferns the one flying the American, the other the Brazilian colors, and representing two passing vessels saluting each other. These models so highly finished and perfect in every detail, the arrangement of the fern surface in ripple-like wavelets, and the light effects produced presented in miniature a highly artistic picture of two friendly cruisers meeting and welcoming each other in midocean.

This dinner was followed the next evening by one of a hundred covers given by the Brazilian Admiral to the Government of the United States, and owing to the short notice given must have taxed the florist to his utmost at this special season when roses are exceptionally scarce, but he proved equal to the task. The table consisted of an oblong open square 65x36

feet, the inner court or space being densely filled with select ferns whose crowns were even with the level of the table. The center piece consisted of a circular mound of moss, the base of which was framed with *Niphetos* buds, from this mound extended lengthwise each way some five feet, a spear shaped densely packed mass of *La France* buds, while vases filled with choicest specimens of *American Beauty* were dispersed amidst the great bed of underlying ferns, so that it had the appearance of a series of rose mounds of exquisite form, yet not so high as to obstruct the view. By actual count upwards of 800 *Beauties* alone were used in this feature of the decoration. From the center of the mound of moss arose a stately *Cycus revoluta*; towering far above the heads of the guests its graceful far-reaching branches imparted to the whole a light and highly artistic aspect. On the table proper along the inner edge were placed at regular intervals flat oblong baskets of *Jacqs*, *Brides*, *Wattevilles* and *Albanys*, with a golden chain as it were of *Perles*, single and in sprays, extending around the entire table. The bottom tiers were made of select orchids of which Brazil has given to the grower so many valuable sorts. On the whole this was one of the most elaborate and successful floral decorations ever attempted in this city upon so short a notice and speaks well for the promptness with which growers in divers parts of the country can respond to the demands the decorator makes upon them.

Z.

Boston.

The display of orchids at the Arlington St. Church on the occasion of the recent Ames wedding was superb. Mr. Robinson had been saving up his finest specimens for some time in anticipation of the event.

Mr. Chas. Storer the orchid painter has returned to Boston after an absence of over two months at Short Hills, N. J. where he has been painting for Messrs. Pitcher & Manda.

Mr. A. H. Fewkes' three best seedling chrysanthemums, *Waban*, *Tremont* and *Beacon* have been sold to Mr. J. C. Vaughan. The *Beacon* took first prize, a silver medal, as the best seedling shown at Boston this year.

Silver Spray and Mrs. Fisher seem to be the two leading white carnations in Boston at present. *Tidal Wave* meets the most sanguine expectations. There are more *Grace Wilders* grown here this season than ever before.

Galvin Bros. have greatly increased the size and attractiveness of their establishment on Tremont St. by leasing the store adjoining the one already occupied by them.

Mr. Fred Mathieson, who was captain

of the bowling team which represented Boston in the contest last August has been confined to his house for three weeks by a severe attack of rheumatism.

W. J. S.

New York.

Business poor in comparison to the corresponding date of last year, but every body anticipates a good Christmas and New Years trade.

The stores are putting on their Christmas drappings, and many beautiful and novel designs may be seen in the leading florists' windows.

The prospects are that there will be an abundance of flowers this Christmas, as the number of growers has been greatly augmented during the present year.

Large cargoes of holly and mistletoe are expected to arrive by trans-Atlantic steamers during the coming week. Importers say the samples received by them were unusually fine. Reports from all holly countries say that berries are plentiful this year.

Marsh pine, the importers say, will be scarce this year, owing to the Indian troubles in the northwest; why not employ the troops to gather our greens?

The docks along the North River for the distance of a half mile present a very country like appearance. Many thousands of fine spruce and hemlock trees are being piled up in readiness for the market. The principal part of these trees come from the evergreen woods of Maine.

The Peter Henderson Co. have an exhibition at their warehouse in Cortlandt street, a full line of French artificial flower designs, including corsages and garlands to wear at balls, and baskets intended for Christmas presents. Florists in general are questioning the consistency of this action.

Regarding artificial flowers in general (we regret to see the *Florists Exchange* lend its leading articles in praise of them) we can make an allowance for the poetry of the advertisers' imagination, but "flowery words" can not put flowery life, and the beauty of nature into metal and rags.

Flower trusts are the latest acquisition to the ranks of American monopoly, combinations of "greed and disappointment." Will these conspirators 'gainst all that's honest succeed? Well, we'll see.

Now that chrysanthemums are over, let us hope that the growers will select for next year the best varieties and discard the hangerson. Speaking of "mums," I heard Mr. Thorpe complain of the brand on exhibition at the recent show, it was rather "dry" John.

Mr. Chas. Farley, for many years with Thorley, is now associated with Scallen, the Broadway florist.

Lapageria alba is the latest acquisition to the flowers used for bridal bouquets and dress garlands.

A bridal bouquet composed of *Lycaete alba*, fringed with delicate fronds of *Adiantum Farleyense* and trimmed with French tulle veiling, was recently displayed in a Broadway artist's window.

Alex McConnell, of Fifth avenue, was very busy during the week, one of his decorations being the very artistic arranging of two thousand *Mermets* on a dinner table. A bank of these roses, with their own buds and foliage, with pink candles and shades to match, adorned the center of the table, garlands of the same rose extending and arranged in semi-circles among the dishes. Opposite each lady guest were arranged pretty favors in the shape of miniature poke

bonnets filled with *Mermets* and tied with long streamers of pink ribbons on which was painted the names of the guests. Large bouquets of McGowan carnations were arranged for the gentlemen.

Neapolitan violets are coming into favor. Orchids will be scarce this Christmas.

It may be said that there are more roses grown under glass at Madison, N. J., than in any other like space in the world. Here everything in connection with the cultivation of the rose is reduced to a science. Cleanliness is the mother of loveliness in the Madison rose-grower's eyes. At Mr. T. J. Slaughter's glass house city reigns the peerless American Beauty; a little distance away we come to Mr. P. Connolly's range of glass, beneath which can be seen the finest *Mermets* and Brides shipped to this city. A visit to these and surrounding rosaries would well repay a day's travel.

American Beauty is the queen, and it would seem that there are very few men able to grow this rose to advantage round New York. Puritan has disappeared despite many grower's efforts to popularize it; first class trade is greatly in need of such a rose.

Marchal Neil and Cornelia Cook have eloped leaving many regrets.

There is plenty of room for a rose the color of Helen Paul or Souvenir de la Malmaison.

Importers of roses inform us we shall soon be introduced to Capt. Naylor, in the shape of a new white rose.

Madame Hoste has not acquitted herself in the manner her brilliant introduction led us to believe she would. Though a beautiful rose, its color will only admit of its being used in a limited class of trade.

Souvenir d'un Ami, like many of our old friends, has gone leaving none to take its place.

We were made to believe that the fickle Duchess of Albany would eventually drive her great French rival (La France) out of the market, but our old love has never shone so brightly before, Vive, La France!

Madame de Watteville, and her sister Madame Cusin, are becoming more popular every year. There is a great future for these two roses, they are New York favorites.

Souvenir de Wootton was a great disappointment; it was introduced as a rival to the American Beauty; if it was classed with the Bennett or Papa Gontier, it might have met a different reception.

Papa Gontiers are scarce, perhaps its being the only red rose of any quantity in the market is the cause of its popularity, it has nothing but color to recommend it. We want more red roses—what's the matter with Meteor?

Bennets are very scarce. Bon Silene is also on the wane, taking with it many pleasant memories.

Niphetos, are abundant and a glut on the market, as its use is almost confined to funeral work. Brides and *Mermets* continue to be very popular. We are anxiously awaiting the Scarlet *Mermets* arrival.

JOHN YOUNG.

Chicago.

At the meeting of the Florist Club held last Thursday evening there was quite a discussion upon the details of exhibition management, as the result of a written communication sent in by a member of the club.

Mr. E. G. Hill, of Richmond, Ind., was present as a visitor and he made many

useful suggestions. He called special attention to the necessity of cutting chrysanthemum flowers when they were "ripe" in order to have them last well through an exhibition, and told how of two lots of flowers cut from the same plant, those cut one week soon wilted when placed on exhibition, while those cut a week later kept in splendid condition through a similar experience. He thought that a musical programme was a necessity at an exhibition, and that money and time expended in elaborately decorating the hall was a good investment. He believed in the arrangement followed by the management of the Indianapolis show in placing the price of admission at 25 cents during the day and at 50 cents in the evening, having the music during the evenings.

Mr. F. Huntsman, of Cincinnati, was also present and related some incidents in connection with the exhibition held there. Mr. Huntsman stated that the shortage on the exhibition given last month would amount to \$1,000. The possibility of a shortage had been provided for, however, by a guarantee fund, the cash having been paid in prior to the holding of the exhibition, and all obligations had been promptly met.

The subject was discussed by other members and there was considerable amusement at a suggestion in the communication from Mr. Bassett that the club appoint a committee, the members to arm themselves with scrapers and endeavor to remove the moss from the backs of some of the local florists who have heretofore remained in their shells and failed to give any assistance at the exhibitions. Action will be taken, probably at next meeting, regarding the preparation of a premium list for the exhibition of 1891.

Mr. Hill had on exhibition at the meeting a splendid lot of cut flowers from his seedling carnations which were very much admired. J. C. Vaughan also had on exhibition a vase of cut blooms of the Waban rose, a spike of flowers of the Anna Mm. Crozy, and specimens of lily and tuberose bulbs.

A committee of three was appointed to confer with Director-General Davis in regard to matters in connection with the Horticultural Department of the World's Columbian Exposition.

The first regular meeting of the Horticultural Society of Chicago will be held Saturday, January 3, next.

Among the enthusiastic members of the new horticultural society is Mr. W. H. Rand, of the well known publishing house of Rand, McNally & Co.

Hortensia M. Black has opened a floral store at 69 Washington street.

The blooms of the Waban rose shown by J. C. Vaughan at the last meeting of the Florist Club were equal to the best *Mermets* in size, being much larger than those shown by him at the exhibition in November.

The report that the Horticultural Department of the World's Columbian Exposition would not be organized until spring proves to have no foundation in fact. We are assured by Director-General Davis that he fully recognizes the necessity of an early organization of the department and that the appointment of its chief will be made within a few weeks.

Mr. J. T. Anthony is able to be round again much to the pleasure of his many friends.

WHEN WRITING OUR advertisers, readers will oblige us by stating that they saw the adv. in the AMERICAN FLORIST.

HOUSE OF CHRYSANTHEMUMS AT JOHN H. TAYLOR'S, BAYSIDE, N. Y.

Philadelphia.

Winter seems to have set in at last. The thermometer has registered 10 above zero, this with some four inches of snow, has made one careful how he sends out his stock.

Chrysanthemums are about done although Messrs Harris and Craig have quite a lot of fine flowers and think they will be able to carry them until Christmas. The rose has begun to assert itself however and when the two are compared now, the mum is not in it.

Dennison Brothers at Bala are growing the Bennett to perfection. We overheard a grower say the other day that he would never plant another Bennett, but we think if he would pay a visit to Dennison's he would change his mind. There are over 5,000 plants of this variety well planted in solid beds in the center of 20-foot houses, the side benches being reserved for other varieties. The plants are in perfect health, covered with buds on stiff stems and of good color. They say it pays them better than any other rose they grow. They have fine La France, Mermets, Perles, etc., but they say the Bennett is the rose for them.

There is considerable talk about the classification of roses. It is to be hoped that something will come of it. The man that sends in one hundred roses, ninety good, and ten poor ones, would never accept ninety cents for a dollar, but if one complains of the ten poor roses, he's a kicker of the worst kind. The time may come when everything will be just right, we hope we may live to see it, in the mean time, let the flowers be classified, and let the man that wants the best and will pay the best prize, get the best.

Hugh Graham's Son has changed the front of his store and put in two flaring windows in place of one large square. The change is quite an improvement and the front now presents quite an attractive appearance.

Mr. C. H. Grigg has opened a fruit and confectionery store on Columbia avenue below 18th. Cut flowers may be kept in stock after a while, but are not leaders at present.

The club house may be said to be finished, and great credit should be given to Mr. John Westcott who has labored very hard and given great attention to the details of the work. There is an attendant present to set up the pins, and in a short time a pool and billiard table will be added. Several matches have been played but no great scores made, still everybody seems to enjoy the game and the alleys promise to become very popular. William Craig, Robert Craig's oldest son, has been quite ill, but is reported better and hopes to be about soon.

Wunder Brothers, of Pittville, are sending in some very fine Mermets. They are the best seen in town this season.

Prices are a peg higher, La France, Mermets, Brides, Cusins, Hostes \$8 to \$10; Perles, Gontiers 4 to 5; Beauties 35 to 50; carnations 1½ to 2.

Vases made of indurated fibre ware are the best for cut flowers; they are very light and it is impossible to break them, they cost very little more than earthen ware and will last a life time. K.

THE CHRYSANTHEMUM was introduced into England just 100 years ago, but it has been cultivated in China and Japan for probably 5,000 years.

Chrysanthemums for Cut Flowers.

We present herewith a view of a house of chrysanthemums grown for cut flowers at Mr. John H. Taylor's, Bay Side, L. I., N. Y. The photograph from which the engraving is made was taken by Mr. W. S. Allen, the wholesale florist of New York City, and it was certainly excellent for the work of an amateur photographer.

We append some notes regarding the propagation and care of the plants in the house shown, sent us by Mr. John Smith, foreman for Mr. Taylor.

"As requested, I send you a few notes on the method of growing the chrysanthemums of which you have received photographs from Mr. W. S. Allen, and will commence with the propagation. The cuttings were put in from the beginning of April until the first week in May, and when potted the earliest cuttings were stopped once before planting out.

"On the 3d of June they were planted out in the benches, which were filled to the depth of four inches, with a compost of two thirds rotten sods, one third rotten manure and a small portion of bone flour. They were planted at a distance of twelve inches each way. When they commenced to grow they were all stopped and during the growing season all weak shoots were taken off and only those calculated to produce fine flowers left.

"As soon as the buds could be seen the plants were supplied liberally with manure water. In disbudding we seldom leave more than one bud to a shoot, the object being to get fine flowers. To support the plants we use strong twine instead of sticks, fastened to wires across the benches and others over head.

"The bench of *Grandiflorum* of which you have photo contained 630 plants, and in that number had only two plants that showed any tendency to produce blind wood which *Grandiflorum* is very apt to do; this we attribute to careful selection. The other bench contained 810 plants of the following sorts: *Syringa*, a pink variety; Mrs. Mary Isaac Thomas, one of the finest whites grown, and a few *Pelican*, a fine white.

"On the side benches were planted Mrs. George Bullock and other fine sorts, making a total of 1,750 plants in the house. "The total number grown this season was a little over 8,000 plants."

Madison Square Garden Exhibition.

POINTS OF CONTACT.

When the crowds congregated at the table where the chrysanthemums were shown on the regulation stands, that is, where each flower was shown individually on a flat surface, during the whole of the exhibition, lines 150 feet long and 2 to 3 persons in width, crowded each other.

POINTER NO. 1.

In front of the magnificent bank of cypripediums, such a bank as has never been seen before, the crowds surged to such an extent as to necessitate the very strongest of iron posts and the thickest of strong rope, to prevent tramping them under foot.

POINTER NO. 2.

Around the economic plants, especially where a few of the plants were placed separately on three feet round tables, with large plainly inscribed placards 16x12 inches with for instance,

THEA BOHEA,

THE TEA PLANT.

the crowd congregated; there were no less than a dozen of these tables.

POINTER NO. 3.

The group containing a fruiting banana and half a dozen pineapples in fruit, correctly labelled as in the economic plants, was always surrounded by a crowd.

POINTER NO. 4.

The 40 feet high *Latania* (*Livistona*) *Chinensis* with a large placard attached was also a feature.

POINTER NO. 5.

A table of Mrs. Alpheus Hardy chrysanthemums, 200 plants in number, was an attraction. A table of miscellaneous chrysanthemums in 6-inch pots, containing many good flowers, was passed without notice by the crowd because it came before the flowers shown on the stand. Of course connoisseurs did not neglect it.

I venture to say that there never has been an exhibition held where more pleasure and more instruction was given.

Were there no weak points? somebody will ask. Of course there were. But the thing is for somebody to improve on what has already been done.

JOHN THORPE.

Spring Exhibitions.

Will some of your readers who have had experience in arranging spring shows kindly give a short account of their plan, i. e., if on tables, height of same, and if say all the hyacinths are grouped by themselves or arranged for effect among primulas, azaleas, etc.

H.

Management of Exhibitions.

ED. M. FLORIST.—You ask for suggestions that may be of benefit to managers of future flower shows, and as I have had some experience showing where certain changes would be beneficial, I advise the following:

First. Let all entry numbers be consecutive, no matter through how many classes they run. In some places each exhibitor is given an entry number which he retains through all the classes in which he shows, and an unworthy judge who wishes to favor an exhibitor soon learns to know the entry numbers of prominent competitors.

Second. Do not limit the size of pots. The judge, if worthy of his place, will make due allowance for this.

Third. Make no distinction between professional florists and amateurs or private gardeners, as there is no reason for any.

Fourth. Let the judging be done by one person, or if he can not judge all in time let him be sole judge of a part of it and some other person be sole judge of the remainder. In this way the management will be likely to select a proper person for judge, the judge will do his work carefully and thoroughly, and one man is directly responsible for the decisions. A competent man may be associated with two or three unfit ones who may outvote him and award a prize to mere size or number that should have gone to quality or condition. The minority judge can not remain by the prize card to explain that he was not responsible for the award and thus seems to stultify himself in the eyes of those visitors whose opinion is worth having.

Fifth. Let your judge make his awards by any method he may think best. Do not insist that he shall score each exhibit or judge by a scale of points. If competition is close in any class he will (mentally at least) resort to such a scale. At the same time he should be familiar with the system and competent to make and sign written score cards when such are really necessary. Judging is best done by direct comparison of competing entries. The point system of judging has been in use at poultry exhibitions in this country for twenty years or more. I have been an interested observer of its results either as an officer, an exhibitor or a judge, and I am satisfied that it has no advantages over the older method; and the most intelligent breeders show a growing tendency to abandon the system in favor of judging by direct comparison. In the hands of a thoroughly competent and impartial judge the system is well enough except that it requires too much valuable time, but in the hands of such a judge any system is well enough, in fact satisfactory results depend altogether on the man who does the judging.

I think we have made no improvement on the old plan of judging flower shows in use in England fifty years ago. Then competing exhibits were staged side by side under the direction of an active managing committee. When all were in place (as they were promptly) the hall was cleared of everybody except the managers and necessary attendants and the judge. The judge with the prize cards or ribbons in his hands was shown the different entries in each class, made his awards, tied on the ribbons or attached the prize cards, while the secretary immediately entered the result in his entry book. The work was quickly done; the judge had no bookkeeping to do, nor did he have to wander all over a large hall

looking for missing exhibits, crowding among a throng of visitors and perhaps without any assistance from the officers of the society; the doors were opened promptly at the time advertised, visitors came and found everything in place and prize cards all on.

Sixth. Set plants (at least those of sufficient size) directly on the floor, protecting them by a light railing if necessary. By doing so you not only save the cost of staging but they show to much better advantage when below the level of the eyes than when above it.

Seventh. Make few rules and regulations, be sure those you do make are necessary and right and enforce them strictly.

W. T. BELL.

Long Island Notes.

BY WM. FALCONER.

THE WINTER.—In the time a year ago we had a few open flowers upon *Jasminum nudiflorum*, *Lonicera fragrantissima*, and *Hamamelis Japonica*, but today not only is there not a bloom anywhere but there isn't even a bud ready to burst open.

CHRISTMAS ROSES (*Helleborus niger* var. *maximus*) may not hold up their heads as boldly or last as long as one would like, at the same time they are very handy flowers to have at this time of year.

ASPIDIUM FALCATUM is a common greenhouse fern with broad, glossy pinnae. Young or middle-aged plants of it are very much liked for setting around palms in vases. And these little ferns are excellent house plants.

THE VARIEGATED-LEAVED *Elaeagnus* are among the most beautiful of hardy shrubs, neat, striking and evergreen. But I am not yet satisfied that they are reliably hardy, for our last two winters were exceptionally mild. As pot plants however they are prettier and nearer than a eurya.

HOLLIES.—In importing European holly bushes don't you find that the plants invariably lose most of their leaves on the passage? I am informed, however, that pot plants brought over on deck in summer do not do this. In the case of the Japanese holly, namely, *Ilex cornuta*, isn't this shedding of its leaves exceptional? Among exotic hollies none of the evergreen species are hardy here.

WE HAVE HAD 17° of frost three times within the last two weeks, and I find that *Grevillea robusta* survived the first shock but succumbed the next time; although the tips of the shoots of *Schinus molle* are pretty well curled up, the bodies of the plants are fresh and green as one could wish, young plants of *Eucalyptus globulus* are dead, but plants 8 or 9 feet high in sheltered places are living yet, only the ends of their shoots are dead. If it not the intensity of cold so much as the long continuance of cold that kills plants, and this is well shown by the fact that many plants are hardy at Washington where the cold is often greater than it is here, that are not hardy here, because our winters here are longer than they are there.

KEEP CALCEOLARIAS and cinerarias in cool airy houses, but near the light, and remember if they get infested with greenfly now, you may as well dump them out as be the trouble of trying to rid them of pest and recuperate them. And bear in mind that lots of tobacco stems, and cold tobacco smoke are better preventives than cure.

SERICOCARPUS GHIESBREGHTIANA with terminal panicles of scarlet flowers, now

BEGONIA OF THE NEW ERDODY TYPE.

in full bloom; *Libonia Penrhosiensis* with scarlet and yellow blossoms nearly at their best, and *Libonia floribunda* with scarlet and yellow flowers now beginning to open, are three of the December blooming plants one should grow in quantity, who wishes to keep up a gay appearance in his conservatory at this time of year.

ROSA RUGOSA is a native of Japan, and one of the hardiest and most ornamental species of roses grown in this country, where, however, it is more esteemed as a shrub than for its blossoms alone. The Japanese value it highly and call it "Beach Pear," because it grows wild abundantly on the sandy beaches, and its fruit is used as food.

EUONYMUS BARK SCALE is one of the evils I cannot circumvent. It appears on isolated as well as on grouped plants, on our choicest species as well as common sorts and there seems to be no practical help against it. Reputed remedies, so far as I have tried them, have failed to be successful. But the burn-pile is always a purifier.

CYPRIPEDIUM INSIGNE is the orchid for the million. It grows like a weed, blooms generously and from November till January, at a time when blossoms of any kind are desirable, and after the flowers open you can cut them today or leave them for a fortnight or more just as you wish and they keep first rate, and last well after they are cut.

ROMNEYA COULTERI (page 243).—Splendid in California. Lots of it have been

grown in the eastern and northern states this year, but don't be disappointed if it didn't bloom with you, for it seldom blooms the first year from seed. And it isn't hardy here. I lifted ours and potted them into empty butter tubs and put them into a deep cold pit there to stay over winter.

EMPTY BUTTER TUBS.—By the way, what nice things these are for plants in winter, and they are cheap and can be had in quantity at the town and village grocery stores. I use them for hardy shrubs as lilac, snowballs, etc. that we lift for winter forcing and for rhubarb and the like.

ASPARAGUS IN WINTER.—Mr. F. Boulton a Sea Cliff florist, near here, is now cutting some fine asparagus. He has a contract with a New York hotel for all he can raise between now and the first of February, at \$2 a bunch, the bunches to be of the same size as summer bunches. He tells me it pays him very well.

CHRISTMAS BOXES.—I always make preparation for a lot of these, each one to contain from half a dozen to a dozen plants. But much depends upon the weather. The plants principally used are Chinese primroses in full bloom—always great favorites; double-flowered scarlet geraniums in full bloom—liked by children; young grevilleas 12 to 24 inches high and feathered to the pot; English ivy, strips 12 to 24 inches long struck last August—ladies like them to put into water bottles on mantelshelves; umbrella

plants (*cyperus*) for those of æsthetic taste; myrtles (*myrtus*), bushy young plants that had been planted out in summer, and lifted and potted in September; and maidenhair ferns, which all desire for table plants. And flats—seed pans—filled with *selaginella* and young ferns are much esteemed. But *Pandanus Veitchii*, *Cocos Weddelliana* and *Asparagus plumosus* are the reigning favorites. Although *Draacena terminalis* does duty in most of the boxes, it isn't appreciated as much as some other things. Last year I had a lot of nice plants of *Retinospora plumosa nana* about 2 feet high and which were highly prized; although hardy shrubs, they last in good condition for a long time in the house. And I can assure you a little plant in bloom in a pot, or a little fern, or a small palm—a *latania* for instance, is a very acceptable Christmas present to little children.

Begonias, Rex and Shrubby.

The evident desire among florists to give the begonia a better place and more attention shows that this interesting class of plants is at last to receive its dues, though tardy. Their great beauty for ornamenting the greenhouse and embellishing the windows of the home has never been questioned, and their freedom of growth, easy culture and perfect cleanliness add greatly to their value.

The magnificent display of these elegant plants at the late Cincinnati show by Mr. Chas. L. Mitchell created a decided sensation. They were grown by that splendid plantsman, the late Richard Pritchard, whose knowledge of plants and skill with them was almost wizard like. It seemed a sad coincidence that he should die on the very day that these grand specimens of high culture were awarded first premiums.

In this collection were plants three feet in diameter of *Gloire de Sceaux* and *Ferdinand de Lesseps* grown in pans; *Metallica* and *Margarita* three feet high and the same in diameter; *Riciniifolia* four feet high by three and a half across; *Ric. Maculata* and *Rubella* only a trifle smaller. Among the Rex were *Cress L. Erdody*, *Queen Victoria*, *Lesonsdii*, *Clementine* and *Edward Pynaert*; these ranged from two and a half to four feet in diameter. Other beautiful varieties in the collection were *Diadema*, *Olbia*, *Semp. Elegans*, *Semp. Amelie*, *Compta* and *Prince Bismarck*. They were done so nicely and in such a vigorous way that they astonished even good begonia growers, and all wondered the more when it was known that all the plants shown were in 2½-inch pots last May, a splendid result of six months' culture.

Mrs. C. Riemann, of Indianapolis, made a most creditable display at the Indianapolis show, and while her plants were small in comparison with those of the Cincinnati exhibit, they attracted considerable attention and interest.

Many amateurs now number their Rex and shrubby varieties by the dozens, and they are still rising in popularity; a recent visit east revealed many varied and unique collections.

That they are of commercial value no one disputes. One of the most beautiful mantel decorations imaginable was made entirely of begonia plants and cut foliage, with the long flower sprays of the ornamental shrubby kinds filling the vases and epergnes.

B. giganta, a rosea grown on a bench as forcing roses are grown, is a very different plant indeed from the half striped specimen usually seen in a pot; in fact, all the

varieties like generous bench treatment, and the quantity of sprays with their exquisitely beautiful panicles of flowers that can be cut under this treatment is simply marvellous.

Begonias like a fibrous soil thoroughly chopped, through which a liberal supply of old rotted manure has been perfectly mixed; when placed in such soil and given the attention similar to that which the rose receives at the hands of a good cultivator, the result is all that could be wished. Let the skeptical try a few begonias under this style of culture and they will be delighted with the result; immense quantities of flowers and an exuberance of magnificent foliage will be the outcome.

The efforts of begonia specialists in the line of novelties both in Europe and America is bearing fruit as is witnessed by the beautiful sorts introduced during the past few years.

Among the shrubby flowering sorts Paul Braunt stands easily at the head. In leaf and habit it resembles Gilsonii, except that it grows very rapidly, it is a continuous bloomer, carrying such immense quantities of pink flowers on good stems as to form a pyramid of bloom. Unfortunately, owing to the limited amount of stock when disseminated, it is still scarce. In a few years this grand variety will be considered indispensable to every collection of plants.

Begonia Rex Ctes Erdody was quite a curiosity three years ago, although known to a few florists as long ago as 1875. In these three years no less than ten or twelve varieties of this type have been produced, several of them most beautifully zoned and marked. They are likely to become very popular, for like the parent, Erdody, they are strong rapid growers and improvements in point of beautiful foliage.

The hybrids of the Rex and shrubby sorts are now very numerous, and in this section we find our most useful class, splendid growers combining the grandeur of foliage found among the Rex, with strong, free growing qualities and easy culture of the shrubby sorts. Clementine may be taken as a good type of this class; we refer to this variety as it is now quite well known and widely disseminated. Bed this variety, or feed it well in a pot, and few of the Rex can surpass the splendid beauty of its foliage, while it sends up leaf after leaf with the greatest rapidity, forming a solid dense mass in a short time, the glistening metallic colors are very high and bright, curve it in a pot and it loses all its color, showing only a dull silver on a russet ground and turning very thin in texture.

We send engraving of Pearl Humfeld, one of the finest of this class and raised by ourselves from carefully fertilized seed. Out of several thousand seedlings, most of which reverted back to one or another of the types, some six or eight hybrids of this class were secured, which were of more than ordinary merit. We are beginning to find out why our French confreres ask such seemingly extravagant prices for their new varieties, count the time used in fertilizing, the watchful care needed in curing the seed, the sowing, potting and space required for housing several thousands of these plants; after potting they must be carefully watched for several months as the small seedlings rarely show their mature characteristics; many that look distinct and promising finally develop into very ordinary sorts, not worthy of either parent, while occasionally it is the "ugly duckling" which develops into beauty, the great majority,

however, being finally emptied from the pots as not worthy of cultivation.

This process makes the five or six which remain as the "survival of the fittest" pretty expensive specimens for their grower. However, as Mr. Carman told us at our annual meeting, there is a great deal of interest in this kind of work, though the interest does not always foot up in dollars and cents.

Beside Clementine, and outside of the newest undisseminated sorts, probably the finest examples of the hybrid Rex family are Lesondii, Mme. Allamagny, Isabella Bellon, M. Charat, Mme. Rival and Mme. Schmitt, most of which have been illustrated in your pages.

The Rex X subpeltata is also a most interesting class and universally admired. In 1888 four of these were imported into this country, Mme. Lionnet, Pres. Bourville, M. Hardy and Gloire de Juoy. By pretty general consent the first three have since been classed under one label as Mme. Lionnet, as there seemed no difference between them except in size of leaf, and no great difference in that respect. Mme. Lionnet, then, is a brighter, larger, finer edition of the older favorite, subpeltata nigricans, and is a jewel among plants. Gloire de Juoy must be seen in bloom to be appreciated, the contrast between its olive green foliage and large pink flowers is very fine.

In a class by itself is Gloire de Sceaux, another exquisite variety; it ought to be well known by this time, but though taken up and widely sold by the catalogue men, it is not known to the trade as it should be. The leaf is nearly round, very heavy and of a bright metallic plum color; the flower is large and of bright rose color in clusters; its beauty can not be put too highly, notwithstanding in its second year we came very near pitching it out for the simple reason that we could not make it grow, it looked starved and scraggly and homesick. Dropping into Wm. Hamilton's conservatories (Allegheny) one day we were surprised to find Sceaux in the best of health and spirits; magnificent specimen plants in full flush of rosy bloom. Mr. Hamilton had found they were fond of plenty of good food and accordingly was feeding them well, and that was the secret of the difference in our plants.

Two new varieties of greatest interest at the present moment are Pres. Carnot and Souv. de F. Gaulin; they are crosses between Rubra and Obbia, they are specially noticeable for the immense quantities of coral and carmine flowers produced; the writer saw them bedded out under the hot sun of Lyons last summer a complete mass of rosy scarlet bloom; we hope to find them good bedders in our own country; these are two novelties about whose excellence there can be only one opinion.

We conclude with two other fine sorts, about which many of your readers have probably heard. Tri. de Lemoine and Tri. de Nancy, they are crosses between Socotrana and Rozeili and are specially notable for their large flowers and their long continuance in bloom, six months at a time.

T. de Lemoine is a bright rose flower of great size and in large panicles, the higher flowers rise erect, while others droop slightly, covering the plant completely; shown at the Paris Exposition in 1889 they provoked universal admiration.

Tri. de Nancy is more dwarf than the former, and the flower is much deeper in color, reminding one of the Impatiens Sultan.

The raiser says that to insure their best condition in winter they must be bedded out during the summer to obtain the strong growth necessary to perfect such great quantities of flowers. All the above will doubtless be distributed in our country early in '91. E. G. HILL.

The question is often asked, what are the best fertilizers for roses? Of all that we have ever tried, pure animal manure is by far the best and much the safest to use. Of these, sheep manure stands first, more particularly for liquid application. For mulching and mixing with the soil to plant roses in I prefer clean cow manure from well fed stock. For liquid manuring, where sheep manure can not be obtained readily, I would advise the use of clear droppings from horse stables, that from well fed animals is best. As a change of food for the plants take clean chicken manure and give them an occasional watering. Where any of these can be obtained I would never advocate any of the manufactured fertilizers, but where such can not be had, or only in limited quantities, then the next best is pure ground bone, and for later in the season a very light dressing of nitrate of soda may be used to advantage.

For the general run of manufactured fertilizers, such as are offered by almost all chemical fertilizer makers, I have no use whatever as they invariably contain some ingredients that are injurious and often very destructive to plants under glass. This may appear to be rather severe on the manufacturers of this class of goods, but after years of careful trial and with a great many kinds of fertilizers we are compelled to abandon the whole. They all affect the plants in some shape or other; one may appear to make the plants grow well but will injure the color, another may do well for fine weather, but get a few cloudy dark days and the effect will be just the reverse of beneficial, another will burn the young growths on warm sunny days, and so it can be traced out all through the catalogue of mixtures.

Roses are very much like animals; if kept clean and fed with good pure plain food they will continue healthy and do more work than those treated to stimulants and unduly excited into activity. Of course there are always exceptions to this rule, but the exceptions occur where extra care and pains are taken in the application of stimulants.

No matter in what form they are applied, in the application of fertilizers of any class, the conditions and class of soil must always be taken into consideration. To put a heavy mulching of manure on a very stiff soil which is naturally retentive of moisture is simply suicidal, while a light sandy soil would be greatly benefitted by the same. And no two cases are ever just alike, so that it is simply impossible to lay down any set rule to go by. But the details of all these things must be studied and worked out by each individual to suit his own particular purpose.

BEGONIA PERLE HUMFELD

The same general law of nature is and always will be applicable to all roses grown under glass and forced for winter blooming, but oftentimes very much more depends upon the watering of the plants at a critical point than upon the actual food applied. I doubt not many will think me over critical when I express the belief that there is not one grower in fifty who rightly and thoroughly understands how and when to water a plant, yet every day's experience convinces me that we all have very much to learn in this direction.

But to return to the question, I would never advise anyone to put a dressing of ground bone on the surface of the soil and let it lay there uncovered, because a large percentage of its value would evaporate and be lost out of the ventilators. Neither do I advocate digging up the soil of the bed or benches to mix it in, but rather cover it with a thin coat of manure, if this is not available then a very thin coat of soil, just enough to cover the bone. Neither would I advise any one to put a coat of chicken manure alone over the surface of the soil, as it would undoubtedly destroy every root it came in direct contact with, but the same reduced to one third and mixed with some light manure or soil would be very beneficial.

Cow manure on the contrary can be applied in thin coats without any mixture whatever and be greatly beneficial. Sheep manure in very thin coats can also be applied without any additional mixture, but in that case much of the ammonia evaporates and is lost, to avoid this a very thin sprinkling of fine dry soil on top of the manure is better. Just one word of caution to those who wish to try bone, be sure you get it pure. Acids in any form are injurious, therefore get your bone free of them; even if the cost is considerable more it will be the cheapest in the end.

Summit, N. J.

JOHN N. MAY.

Boarding Plants.

ED. AM. FLORIST:—One of your correspondents recently explained his double entry method of bookkeeping in regard to plants left for treatment or storage. We do it without any bookkeeping and we think in a more simple manner. When plants are brought in each one is labeled with the name of the owner and date. When returned if storage is not paid a charge is made for it as in case of a sale; the label shows length of time to charge for, and the plant itself shows amount of space. If storage is paid and plants are

not removed, a new label is used and date changed to the time to which boarding has been paid.

Franklin, Pa.

W. T. BELL.

Answers to Questions.

SHADED GLASS.

In regard to frosted or ground glass for carnations, I have no doubt it would do quite nicely during the months of June, July, August and September, but for the balance of the season it will be found that as a rule we have none too much light for the perfect development of the flowers, and to bring out the colors to the best advantage requires all the sun we generally get through the dark winter months.

BONE MEAL FOR CARNATIONS.

If bone meal is used to mix into the soil at this season of the year it should be done with considerable care, especially if it is the genuine article; but it can be used in February or March with much more safety. I can not say, however, that I am much in favor of the use of bone meal for carnations. I think the disease that is now so prevalent owes its origin and existence in a great measure to that very cause, and if used at all it should be lightly sprinkled on the ground between the plants, then stirred in, care being taken that it does not lodge among the foliage of the plant; but a good deal of the material that is sold for bone meal is so harmless as to render these precautions unnecessary.

C.

New Carnations.

Wishing to know more of the highly praised Lizzie McGowan carnation than I could learn from the blooms exhibited and the press descriptions, before investing in it to any extent, I concluded to visit it in its two homes, Orange and Paterson.

The cut blooms seen at the various exhibitions gave me a rather poor opinion of it, but that opinion vanished at the first sight of Mr. McGowan's bed. The blooms were a uniform size, fully as large as the largest Lamborn, without a poor flower among them. The growth seems to be all that can be desired, being compact and yet very vigorous and clean. Taken all in all it takes first rank among the whites we now have, and originators will have to place their standard very high in order to excel it.

Mr. McGowan also has a new yellow, Louise Porsch, very similar to Buttercup in markings, but a trifle lighter in color. It is a very vigorous and robust grower and gives promise of taking the place of Buttercup, which seems determined to die out in spite of all the careful nursing it has had at the hands of various carnation growers. There are also a number of seedlings on trial here that were not in bloom, we will no doubt hear from them next season.

Mr. Chitty's bed of McGowan is almost a duplicate of that at Orange. Measuring a number of blooms here the average size was found to be 2½ inches, the smallest being 2½ inches in diameter.

Mr. Chitty also grows a large number of Lamborn and Tidal Wave, two carna-

tions that are not grown as largely as their merits warrant.

Grace Wilder from cold frames were being filled into the beds occupied by chrysanthemums earlier, thus securing double crop from the same house. In fact everything at this place from the handsome residence to the well planned and carefully worked greenhouses show that there is a thorough business man at the head. A thorough business education is quite as important as the scientific and manual training, and a feature that is too often neglected. A. M. HERR.

A Boston daily paper speaks of the chrysanthemum as the "floral dude" of the season.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By a first class Scotch gardener, age 27; have had 12 years' experience in the business, and can take charge of either private or commercial place; first class references. Address J. Box 118, Morrison Ill.

SITUATION WANTED—By a first class florist, thoroughly posted in all branches, as foreman of a commercial establishment—a place where roses and cut flowers are made, is a first class florist. Mention salary. PRINCETON, care Am. Florist.

SITUATION WANTED—By a first class gardener and florist who at present has charge of one of the largest private places in this state. Grower of prize chrysanthemums. State wages. Address L. K. care C. F. Kummel, 130 Retreat Ave., Hartford Conn.

WANTED—Foreman and propagator, middle age, single habits good, good recommendations, steady, state wages. A. care Am. Florist.

WANTED—To either buy or rent several greenhouses with farm attached, near growing town. Address W. Box 38, Pomeroy, Conn.

WANTED—Good gardener to take charge of ferns and palms and to grow decorative stuff for retail store. Address HUNTSMAN FLORAL CO., Cincinnati, O.

WANTED—A competent florist and gardener for a commercial place, with experience in growing roses, forcing of bulbs and other flowering plants. Address with references and salary required, A. PETERSON, 41 West 4th St., Cincinnati, O.

WANTED—By a thoroughly practical florist (a Jerseyman) with 20 years experience, position as manager or foreman in a commercial establishment; roses & specialty, is a first class spot flower worker. Best of references. EDWARD E. SALYER, care Harvey W. Hardman, 16 Pulaski St., East Orange, N. J.

FOR SALE—A country hotel with greenhouse, in a prosperous Connecticut town. For particulars address HOTEL, care Am. Florist.

FOR SALE—Brand new double greenhouse, each 10'x20', ready for business, only greenhouse in live growing town of 5,000, best of reasons given. Address Lock Box 18, Beardstown, Ill.

FOR SALE—Florist business, thoroughly equipped and stocked. Doing a fine business at home and abroad. In a growing Ohio city. Must sell for good reasons. A good investment. Four houses. The real estate for sale or leave to purchaser. Price \$5,000. Address BARGAIN, care Am. Florist.

FOR SALE—A florist establishment, one greenhouse 75x18, and two 75x10 feet each, heated by hot water (Wentworth's); 25 acres of good land, some good and pasture, plenty fruit; dwelling house, barn and other out-buildings; good well and cistern. All buildings new and in good order. One hour from New York City, and one mile from depot. Price, \$4,800, will sell the greenhouse property separate for \$2,000. Address P. O. Box 10, Kansas City, Mo.

FOR SALE

A good established florist business in a western city of 40,000 inhabitants. Six acres both m land with ten greenhouses heated with steam, large packing room, 100 hotbed sashes, own water works, new broom house with cellar, stable, all implements, wagons horses, all in good order. Good trade good stock of plants; situated on main street on city limits between three car lines. Good reason for selling under liberal conditions. For particulars, address H. H. care American Florist, Chicago.

LOOK! LOOK!

Florists Look! Grand chance, don't miss it. 10 minutes' drive from Chestnut Hill, one of the best located 2 acres of land suitable for your purpose, 13-room cottage, stable for 3 horses, five wagons, cow stable, henry tool house, 50 fruit trees, grape vines, berries; sun exposure the entire day; high lying ground. All lately done in, painted, repaired; new heater for the entire building. Will exchange for property in the city of Philadelphia or sell. Address E. & G. A. FRUHL, 1645 N. Broad St., Philadelphia.

NEW CHRYSANTHEMUMS.

VAUGHAN'S "Florists Set" FOR 1891.

We have secured a set of **TEN** from representative American hybridizers. We have put the price within the reach of every florist who owns a hundred feet of glass. Let us have a Fall show in every city in '91. There is no advertising equal to it.

Read the names of those who have each contributed specimens worthy of their reputation and which we are willing to stand behind.

L. B. 338.

ALBERT M. HERR, LANCASTER, PA.

Lizzie McGowan.

I beg to announce to the trade that I shall be prepared to distribute this magnificent **NEW WHITE CARNATION** on the 10th of February, 1891, and that the price will be \$12 per 100, and \$100 per 1000, for strong well rooted plants from the cutting bench. Favorable special rates will be allowed on large quantities. Cash or its equivalent should accompany orders from unknown correspondents.

Send for descriptive circular of this and other sorts. Parties wishing a few flowers of Lizzie McGowan can have them by enclosing twenty-five cents in stamps.

ADDRESS

H. E. CHITTY, PATERSON, N. J.

"Wm. F. Dreer,"

This magnificent **NEW CARNATION**, is a seedling of Buttercup, fertilized with Century. Is of exceedingly strong, healthy growth, upright and robust; retaining the style of flower of Buttercup; has a majority of long stems—often four full blown at one time on a single spike. Its color is a beautiful rose pink, deeply fringed petals, very large, often 3 inches in diameter, and does not burst. All who have seen it pronounce it the most perfect Carnation yet produced.

Strong rooted plants after Jan. 15th, at \$2 per doz.; \$15 per 100. Sample blooms of this and "GOLDEN GATE" will be mailed to any address on receipt of 25 cents.

CHAS. T. STARR, Avondale, Chester Co., Pa.

LIZZIE MCGOWAN.

I will be prepared to distribute my **NEW WHITE CARNATION** Feb. 10, 1891, and the price will be \$12 per 100, or \$100 per 1000, for Rooted Cuttings propagated from **STRICTLY HEALTHY PLANTS**. Special discount on large orders.

Cash or its equivalent should accompany orders from unknown correspondents. Send for descriptive circular. Parties wishing a few flowers of this **GRAND Carnation** can have them by enclosing twenty-five cents in stamps.

ADDRESS

JOHN MCGOWAN,

363 Main Street, ORANGE, N. J.

Orders for less than one-half inch space not accepted. Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

REFERENCE has several times been made to the prolific source of synonyms in the practice of different firms in importing the same chrysanthemums from Japan and each giving the varieties new names of their own. Certainly every precaution should be taken against such a duplication of names. And why should not the original Japanese names, or translations of them, be retained? We concede to European growers the right to name their new plants, and that we are bound to respect and retain those names, no matter how fanciful or absurd. Are not the Japanese gardeners entitled to the same consideration? And are not the Japanese names noted in a recent issue fully as euphonious as the wicked mouthfuls inflicted upon us by some European raisers? We certainly prefer such names as "Moon in the Window" and "A thousand sparks" to such as "Le Cte Foucher de Cariel" and "Triomphe de la rue des Chalets."

ON THE 8th inst. we received from florist Wm. Clowe, Corsicana, Texas, a box of roses cut from plants growing out of doors. The blooms presented every indication of having been of very good quality when shipped, though they were about ready to drop to pieces when received. Mr. Clowe writes that the roses were cut on the 3d inst. and that the first frost—only sufficient to injure coleus and the tops of cannas—occurred the night of same date. He adds that at the date noted (December 4), lantanas, abutilons and hibiscus were still uninjured, and that he had 50 varieties of roses in bloom in the open ground.

GREEN in bulk and holly are reported very scarce at time of going to press. Snow storms which checked the gathering of green in November is the main cause of shortage in that article, while increased demand evidently explains shortage of holly. As showing the condition of the market on green, one thousand pounds at 5 cents per pound was expressed from the west to New York City on the 12th.

J. G.—The adiantum of which you send specimen from is probably merely a seedling variation of *A. gracillimum*. Such variations are not uncommon, and the specimen sent does not show any marked characteristics to distinguish it from the type, though the habit of the plant may be somewhat different.

IN ORDER to give this paper your fullest support confine your orders for supplies to those who advertise in its columns, and in writing to advertisers please say that you saw their advertisement in the AMERICAN FLORIST.

THROUGH the columns of the New York Press we learn that Dr. John Thorpe is an authority on the chrysanthemum. We expect a contribution from the "Doctor" at an early date.

ARE THE greenhouse boys to borrow the WEEKLY FLORIST from the office nights or will it pay to give these workers a Christmas present of our 52 numbers for 1891 for their own.

T. T. R.—Bone coal is as its name indicates, bone coal or carbon. It is made by manufacturers of fertilizers and may be had from dealers. Most seedsmen keep it we believe.

THE CIRCULATION of the AMERICAN FLORIST covers every section of the North American continent, and finds every nook and corner where a florist has established a business.

News Notes.

CINCINNATI.—The Huntsman Floral Co. has removed to a new store at 37 and 39 West Fourth street.

DENVER, COL.—Mr. and Mrs. Avery Gallup lost their youngest son, Avery, by diphtheria December 2, after a sickness of only five and a half days.

PITTSBURG.—A movement is on foot to organize a Florists' Club for Pittsburgh and Allegheny. The first meeting will be held at Ludwig & Richter's store in Allegheny January 8.

ST. LOUIS.—A local daily gives a description of the plants to be seen in the conservatories of Mr. J. W. Kauffman, a wealthy amateur who resides on Lindell Boulevard, and states that his collection of orchids is worth \$6,000.

PITTSBURG.—Trade is fairly active with prospects of good holiday business. Flowers are not likely to be over plentiful. Lycopodium wreathing can be bought at about last year's prices, although costing in bulk 50 per cent more than in 1889.

UTICA, N. Y.—A special meeting of the Florists' Club was held on the 10th inst. Final report on financial returns from the recent exhibition showed a surplus of \$40, and the success of the exhibition was voted to be complete. The club voted to have a supper early next month. Mr. Peter Crowe was invited to read a paper on roses at the next meeting.

GERMANTOWN, PA.—At the regular monthly meeting of the Germantown Horticultural Society on the 11th inst., the committee on chrysanthemum show reported that the total receipts of the last exhibition were \$397.57 and expenses \$395.65. An election of officers for the ensuing year resulted as follows: President, Benjamin H. Shoemaker; Vice Presidents, Jonathan Jones, Charles J. Wister and John Silson; Secretary, Thos. E. Meehan; Treasurer, Joseph Meehan.

PATERSON, N. J., Dec. 8.—The month of October, or by far the larger part of it was made up of dark cold rainy weather with an occasional chilly fog, the chief business of the month was to generate and nurture mildew which has been exceedingly troublesome this fall. The coldest weather of the month was on the morning of the 31st, when the thermometer indicated 24° at 6:30 a. m., on the whole the month was dismal and the advent of November was a continuation of the same until the morning of the 6th,

when it was quite cold, thermometer falling as low as 24°, which was followed by much clearer weather and greatly improved conditions generally, and which prevailed with brief excursions throughout the month; on the 21st, 22nd and 23rd we had some very biting cold weather, although thermometer did not fall below 30° on any one of those days, but it gave us a fair warning to prepare for winter all the same; on the night of the 27th it became quite cold and next morning at 6:30 thermometer indicated 15°, which was the lowest point for the month. December came in cold and winter like, with thermometer at 10° on the mornings of the 2d and 3rd and has remained pretty much like winter ever since.

Syracuse, N. Y.

At the annual meeting of the Central New York Horticultural Society held in this city December 3 the following officers were elected: President, A. D. Perry; Vice-Presidents, Hon. J. J. Belden, Hon. D. P. Wood, H. S. White, E. P. Judson, W. Brown Smith, A. H. Davis, T. Bishop; Secretary, Henry Youell; Treasurer, Peter Kass; Executive Committee for three years, G. Ham, G. Bartholme.

It was decided to hold a spring show to occur about Easter, several special prizes were offered and a committee was appointed to solicit further special prizes for the fall as well as the spring show.

This society has been in existence only three years, but the result of its good work is already showing itself. The old established florists find their plant insufficient to the demand and three new florists have started.

The secretaries of kindred societies will confer a favor by sending copies of their prize lists, especially for spring shows, to H. Youell, 228 Beecher St., Syracuse, N. Y.

Early Days of the Trade in California.

We clip the following interesting note from the *Pacific Rural Press*:

EDITOR PRESS: In the fall of 1853 I bought land in Alameda and moved from San Francisco in January, 1854. I commenced to grow flowering and ornamental plants and soon had quite a stock for those days, but I found there was no sale for them in Alameda. I arranged with Wainwright & Randall on Merchant street to have an auction sale. The little steamer that was running from San Francisco to Alameda was blown up soon after my moving over. I got the plants ready and hauled them to a sloop, put them in the hold and went with them to San Francisco. I had them hauled to the salesroom and advertised them three days. They attracted a great deal of attention. One lady would say to her escort, "Buy this for me," and another "Buy that for me," and frequently selecting the same plant. On the morning of the sale there was a large crowd. Governor Wainwright was in his happiest mood, calling Cinerarias "Eranthis." The bidding was spirited. Everything went like hot cakes. Carnations brought from \$2.50 to \$5; one monthly tree carnation, six feet high, brought \$10; *Salvia splendens*, from \$2.50 to \$5; roses from \$2 to \$7; a cactus, grafted on the opuntia or prickly pear, \$30; a *Camellia Japonica*, \$30; cinerarias, from \$1.50 to \$2.50; chrysanthemums, \$2.50; a well-trained rose geranium \$34. The sale netted me a handsome sum. I had an auction sale every week for several weeks, with quite good results.

JAMES HUTCHISON.

Oakland.

"A Little Knowledge, Etc."

An amateur friend who has a small greenhouse dropped in on a Smithfield street florist yesterday to inquire what cape flowers were, and was shown a sample of the dried article so much used in making up immortal work for the holiday season. "Yes," he said, "they are the same thing; I was ordering some bulbs from a New York house and wrote that if the cape flowers they offered were sound they could send me a case, expecting of course, to get a choice lot of amaryllis and other African bulbs."

"Well, a day or two ago my gardener came to me with a puzzled look and said, 'Mr. —, I opened the big box but this is nothing we want,' exhibiting a handful of capes. Oh, said I, that is the stuff used for packing the bulbs in; go on and unpack the case, which the gardener continued to do until the case was empty, and about six barrels of cape flowers were piled up alongside. 'Only this and nothing more.'"

Hot Water Under Pressure.

In reply to "H," I would say that it is not claimed that pressure affects the circulation, although some writers have suggested that it might. As he suggests the pressure is the same in all directions and of course cannot affect the circulation.

You can heat water to a higher temperature without its boiling with pressure than you can without, and consequently you can get more radiated heat from your pipes, that is all there is to it. Open pressure is generally considered the best, the water supply being placed at sufficient height to give any desired pressure, no safety valve or gauge being needed. I believe that none of the modern, sectional cast iron boilers are adapted to the closed pressure system, they might leak at the joints, nor would it be advisable to put a very heavy open pressure on them without first ascertaining from the makers how much they will stand. With boilers made entirely of tubes it is different, they will stand any pressure that is likely to be used. L. WIGHT.

HOLLY. We are sold so short now on this stock that we must get it in by Express—our price will on Express Stock be advanced to \$7.50 per case after this date. Bouquet Green sold out—Dec. 16.

The Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president. JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1895.

MR. CHAS. N. PAGE, of the Iowa Seed Co., has established *The Western Garden and Poultry Journal*.

PRICE & REED, of Albany, suffered a loss of several thousand dollars from fire and water December 7. We have not learned if any new catalogue matter was destroyed. Insured for \$15,000.

A. D. PERRY, the genial head of the firm of A. D. Perry & Co., Syracuse, N. Y., was unanimously elected president of the Central New York Hort. Society, December 3. He has richly earned the honor conferred, having spared neither time nor money to make the society a success.

A CURIOUS ACTION ABOUT SEED POTATOES has just been heard at Macchesfield County Court. A farmer bought a quantity of seed, which he understood to be Scotch Regents; but he alleged that when he came to dig the crop he found it to consist of mixed sorts, of very inferior quality to Regents, and much less salable. He therefore sued the person from whom he bought the seed for the estimated amount of his loss. Experts were produced on both sides, and while one set swore the potatoes were Scotch Regents, the other set swore they were not. As one of the solicitors remarked, there was as much difference of opinion as if it were a horse or a cow case. In the end, Judge Hughes took the experts outside the court, where a load of the potatoes was on view, and asked them to pick out any of the potatoes which were not Regents; and after diligent search they could only find about half a dozen. This decided the matter, and judgment was given for the seed merchant.—*Gardening World*, Nov. 29.

IMPROVED GIANT VERBENAS.
This grand strain of the Mammoth type is absolutely the finest yet produced. I have obtained it by five years of high culture and careful selection. By recent comparison it well merits all its praise. The flowers are over an inch in diameter, borne in profusion in immense umbels. The finest colors. Every florist should sow it. Per trade pkt. 3 cts.; 5 pkts. 10 cts. 5 pkts. \$1.00.

DREER'S DOUBLE PETUNIAS

Now Ready for Delivery, our Select Strain of Double Petunias, in good, strong, healthy stock plants, in 3-inch pots.

The strain of Petunias we offer is too well known to require much description—suffice it to say that the varieties offered this season are fully equal to our former introductions. The advantage of securing stock early in the season will be readily appreciated, as a limited number of plants will produce a large number of cuttings.

We offer 15 named varieties, at \$1.50 per dozen; set of 15, for \$1.75; \$10.00 per hundred.

Seeds of Double Petunia, from the finest fringed and blotched varieties, saved on our own grounds, crop 1895. Per trade pkt. of 700 seeds, \$1.

Our New Trade List, offering all the good things of the season, will be ready in January.

— ORIGINAL AND LARGEST GROWERS OF —

LILIUM HARRISII, BETTER KNOWN AS THE BERMUDA EASTER LILY.

— BULBS NOW READY FOR DELIVERY. —

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, of a crop of Liliium Harrisii in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it fits in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and opens off perfectly and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that Liliium Harrisii flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing." The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— HALF A MILLION BULBS. —

Be sure you get the genuine Liliium Harrisii. In order to secure "the true variety" purchase your Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant L. Longiborn in Bermuda, planting it with Harrisii to increase their stock rapidly when Harrisii was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Ball Decorations.

On the occasion of a ball recently given in the club house at Tuxedo Park the decoration of the ball-room was entrusted to an expert, who, nevertheless, is not a florist—Miss Stearns, of the Associated Artists of 115 East Twenty-third Street. The result proved that something might be done in the way of floral decoration which would lack the conventionality that so often marks such arrangements without falling into the heterogeneity of amateur attempts. The room is very large and circular in shape, with fourteen windows which sustain the cornice. On one side is a stage where the musicians were to sit. This was decorated in harmony with the pretty woodland scene which formed the background, high palms flanking the sides, while a row of lower palms, mingled with chrysanthemums, bordered the stage, and trailing ivy fell over the front. Chrysanthemums were also intermixed with the taller palms, in three shades of pink, making a charming effect, as the electric light shone up over them from the footlights. This scheme was continued around the room by banking the window-recesses with Hemlock boughs and great sprays of white chrysanthemums, the dark green foliage being carried up into the coves of the domed ceiling. The columns were covered with autumn foliage, oak-leaves of a dark reddish bronze color forming the base, and being shaded gradually up into terra-cotta tones and finally into the yellow of maple foliage. On this background chrysanthemums were arranged, likewise in graded colors, beginning below with dark red blossoms and shading up to the capitals, which were encircled by masses of golden Grandiflorums. To obviate, however, an undue contrast between these red and yellow pillars and the pink and green of the stage, the two columns adjoining these were differently treated, being wound with hemlock foliage interspersed with white chrysanthemums—the same scheme of color chosen for the window recesses. The total effect of the beautiful room thus adorned was at once dignified and festive, and an essential consideration in such cases—it made an excellent background for the gay dresses which filled it.—*Garden and Forest.*

PLANT BED CLOTH.

CHEAP SUBSTITUTE FOR GLASS ON Hot-beds, Cold Frames, etc. Three grades, Light, Medium, Heavy.

Used by Florists, Gardeners, etc., invaluable for Tobacco Growers. Protects from frost. Promotes hardy vigorous growth and keeps beds warm. Will not shrink or mildew. ANOTHER OPEN LETTER.

TIMES BUILDING, NEW YORK,
December 6, 1890.

TO FLORISTS:—

Through an error in writing our ad. of Dec. 4 we quoted the Window Gardening pamphlets at \$2.00 per 100. The lowest price we can furnish them at is \$3.00 per 100, and we guess you will say that that is a mighty low price. This includes the printing of your card on the back in red ink.

If any florist who wants it has not received the December (Christmas number) of *The American Garden*, by the time you read this, please drop us a card and a duplicate will be sent at once, gratis. Regular price 20 cts.

Don't forget our offer of last week on subscriptions. It will hold good through this subscription season.

Yours truly,

THE RURAL PUBLISHING CO.

Foreign Notes.

SOME remarkably well grown specimen chrysanthemum plants were shown at the recent exhibition at Antwerp.

CHRYSANTHEMUM Mrs. Alphens Hardy seems to have been a very unsatisfactory grower, both in England and on the Continent.

M. GOSHIDA, secretary of the Horticultural Society of Tokio, Japan, visited the exhibition of chrysanthemums at Ghent, Belgium, last month.

AT A MEETING of the English National Chrysanthemum Society held November 24, suitable resolutions were passed on the death of the late Shirley Hibberd.

AT A RECENT meeting of the National Chrysanthemum Society of England first class certificates were given to each of the following chrysanthemums: Sunset, Beauty of Castlehill, Countess of Lytton, Princess Waldemar, Beauty of Castlewood, Violet Rose, Mrs. E. W. Clarke, A. C. Kingston, Danse.

AN ENGLISH amateur has a double-white flowered camellia which is 18 feet high from the soil and 54 feet in circumference. The base of the stem close to the ground measures 27 inches in circumference. Recently 7,000 bloom buds were picked off to allow the remaining 5,000 buds to develop better.

AT THE recent meeting of the International Agricultural and Forest Congress at Vienna a resolution was adopted recommending the establishment of government stations where observations and trials in combating plant diseases shall be made on a common plan, the directors of these pathological stations in different countries to meet annually to discuss and pass such resolutions as shall be deemed necessary, looking to the prevention and staying of epidemics of plant diseases in the future.

Payment for Glazing.

In reply to the request for opinions on the matter presented under above heading in the issue of December 4, would express mine as follows: The best way is to measure the house, calculate the number of feet of glass and agree upon a definite price for the job. But in the case your subscriber presented he should pay for laying the full 47 boxes of glass. He paid the dealer for 47 boxes of glass and was to pay the glazier 60 cents a box for laying it. It seems quite probable that neither party expected that more than 44 boxes would be required, or that there would be 3 boxes of broken glass, but if the glazier is small enough to demand the extra \$1.50 your subscriber had better put a good face on it and charge the amount to experience.

A HAPPY NEW YEAR to every reader.

MANY SUBSCRIPTIONS expire this month. Please oblige by renewing promptly, thus lessening the clerical work at this office.

IT IS DOUBTFUL if a more acceptable holiday present could be decided upon for your employees or friends in the trade than a year's subscription to the AMERICAN FLORIST. The fifty-two issues for 1891 can be had for one dollar.

FOLLOWING the article on color, of which we print the first installment in this issue, we shall publish some general directions regarding proper and improper combinations of color in the arrangement of flowers and foliage, from the pen of a well known Boston artist.

Color.

BY H. H. BATTLES.

Some time since the editor of the AM. FLORIST impressed upon my mind the importance of a correct nomenclature of color with a view to its practical application in correctly naming and properly classifying the enormous variety of flowers now grown, and too, to assist the dealer in cut flowers to appropriately group complementary colors in his designs.

The importance of the subject is becoming daily more evident. The hybridizing of species has now become almost an exact science; brains and experience are interested in the means, and science and wealth in the results.

The use of cut flowers in decoration is now practically universal, and with the expenditure of hundreds and thousands of dollars purchasers have a right to demand that refined and æsthetic taste be as well satisfied with beautiful harmonies as they have that the epicurean sense should be gratified with dainty dishes.

With this end in view, and further to attempt to bring some order out of the chaos now existing, this article has been prepared. Whatever merit there may be in it is due to my masters, M. E. Chevreul, Director of the Dye Works of Gobelin; A. F. Church, Professor of Chemistry in the Royal Academy of Arts, London; Robert Ridgway, of the United States National Museum, and John Ruskin, to whom more than to any other do I owe the pleasure I derive from the careful observation of colors, and who has taught me too, that forms and ideas of beauty may be discovered in the most commonplace objects.

Frequent quotations of sense at last, if not of words are made from their works, and if they be not always credited no one will mistake the thought of the teacher nor the words of the pupil.

Endeavoring to improve the nomenclature of color as applied to our business I deem it necessary to look carefully into the present system; fully realizing this, I have taken the catalogues of three reputable firms and analyzed the terms used. In each case I have made use of about one thousand of such terms which gives us a full and impartial idea of the present method of describing the color of flowers.

In my researches I have tried to keep my mind wholly on the subject of color, but at times my eyes would lead my mind to the description of plants, and I have been truly lost in a sea of words, so much so that I was tempted to learn what wiser men had said of words, and found that Addison has said: "Words when well chosen have so great a force in them that a description often gives us a more lively idea than the sight of things themselves."

Dr. S. Johnson has said that, "Lan-

guage is only the instrument of science, and words are but the signs of ideas." I wish, however, that the instrument might be less likely to decay and that signs might be permanent, like the things which they denote.

Another says: "Multitudes of words are neither an argument of clear ideas in the writer nor a proper means of conveying clear notions to the reader."

Another says: "He that uses many words for the explaining of any subject doth like the cuttle fish, hide himself for the most part in his own ink."

And lastly: "He who has a superlative for everything wants a measure for the great and small."

If the compilers of catalogues would be advised by some of these old sayings they would express more clearly their description of plants and flowers.

Many assert that it is necessary to use the great number of terms to express the thousands of shades and tints of flowers. This is absolutely incorrect—discard three fourths of them and our descriptions will be much clearer.

With a full realization of the difficulties that will arise in attempting these descriptions, we are convinced that the present method can be greatly improved, always bearing in mind that the simplest way is by far the best. Use as few words as possible and see that every word has a meaning. It is necessary to have a clear idea of the most important colors, such as crimson, scarlet, orange, yellow, blue, purple, etc. Also the effect produced by combining any two, or the addition of black and white to any of them.

Then instead of multiplying words by describing a flower as being a most intensely brilliant glowing fiery flaming red, a much clearer impression will be made on the intelligent readers by calling it an orange scarlet, or possibly a scarlet.

By a glance at the list of terms used to express the different tones of white, we find that out of one hundred and thirty-eight attempts thirty-six terms are used.

It would take a mind more acute than the average to distinguish the difference between the following terms, all of which are found in the list: white, pure white, clear white, pure snow white, beautiful white, snow white, chaste pure white, lovely white, snowy white.

It would be much better to call a flower white when we can distinguish no trace of color in its composition. When we can detect a color let us use that color as the adjective, for instance, a list like the following would answer all practicable purposes, white, bluish white, pinkish white, yellowish white (or cream white), grayish white, greenish white, lavender white, brilliant white.

It may be admitted that the authors wished to express different shades of red when they used the terms crimson, carmine, scarlet, vermilion, red and rose.

These six terms which are capable of expressing so much in themselves are mentioned 1,307 times and by the use of hundreds of adjectives are distorted into four hundred and thirty-six terms; even then this list does not include brown, maroon, flesh, pink, magenta, cherry, amaranth, claret, chocolate, ruby, bluish, coral, terra cotta and mahogany, of which there are several hundred more.

Crimson is mentioned three hundred and seventy-two times while carmine but one hundred and thirty-nine. Both of these colors are made from cochineal, the latter being the purest and most refined, but when we examine the pigments that are prepared by the best manufacturers it is not easy to distinguish the difference in tone. Crimson is a little darker while carmine is a little more brilliant. Artists who are working with colors constantly have no trouble in discriminating between the two, not only in tone, but in their peculiar qualities when combined with other pigments.

Vermillion we find is seldom mentioned outside of the circle of artists, with them it is a most valuable color. In our list we find it mentioned but fourteen times, with such terms as bright, brilliant, dazzling, etc. Any of these terms would indicate that the authors intended to describe some tone of scarlet. Would it not simplify matters very much for us to discard vermillion for the present and let the different shades of scarlet express our idea of that color? (To our mind vermillion is a dull scarlet.)

Blush has been mentioned thirty times, among these the authors can distinguish thirteen varieties, they tell us of the pale and faint, the light and deep, the delicate and silvery; we should like to think of them all as being pleasing, but they describe only one as being such. They also tell us of the salmon blush. Would it not be better to describe the kind of pink that is meant, whether it is a yellowish pink, purplish pink, etc., or a light pink, when no other color can be distinguished in its composition?

Purple has been used one hundred and forty-six times with thirty-eight varieties; violet, sixty-two with fourteen varieties; lavender sixteen times with three varieties, and mauve six times with four varieties, all of which are different shades of purple.

Now, if we can determine upon a true purple, violet, lavender and lilac, and to each of these shades add the terms light, dark and brilliant we shall have sixteen well defined names to express our ideas. If in describing a flower we determine that there is a little more red or blue in purple than is necessary to make a pure purple, lilac or lavender, let us describe it as being so, as reddish purple, bluish purple, etc., this will give us several more expressive terms.

Yellow is a color frequently found in flowers. In our list the term is used four hundred and forty-one times with ninety-six varieties. We should recommend the following terms to express the different tones of yellow: dark yellow, yellow, light yellow, very light yellow and yellowish white, dark sulphur yellow, sulphur and light sulphur, dark buff, buff and light buff.

The list of terms used to describe the different tones of black should have our careful attention. There are few who will endorse them as being wise terms to use in describing flowers. It may not be necessary or advisable to devote much space to green, but in attempting to describe green do as it is advisable with all colors, mention the color that is prom-

inent in its composition, for instance, bluish green, light yellowish green, dark yellowish green, etc. We can not understand why the term grass green is given to several different shades of emerald green as known in the artists' pigments. This, however, is frequently done. The lustrous side of the grass is done. The before us matches perfectly the sample of olive green that we offer.

Possibly it would be well to establish a list of standard greens chosen from well known plants; this would be a comparatively easy and a very satisfactory manner, as the foliage does not undergo the many changes that we see in flowers.

It will prove interesting to examine the list of "Assorted colors." Notice the extravagant use of superlatives which might be easily corrected if there be any desire to do so.

It would hardly seem wise to describe a flower as containing "Tints seen in summer sunset," and another "As if wrapped in a cloud of mist," another as the "Most intense dark rich velvety crimson imaginable," these are but three of the many absurd ones that can be found.

The word "transparent" is frequently used; flowers are never transparent, but generally translucent.

The fact that three of the best known firms in the country generally differ in the terms used to describe well known flowers is ample proof that some method should supplant the haphazard course now followed. How utterly they fail in these attempts may be seen by comparing their description of some of the most popular roses.

By one firm the Anna De Diesbach is described as being a "Clear bright carmine" by another "Brilliant crimson sometimes shaded with bright maroon" and by a third as "Dark rich pink also clear bright carmine rose."

Baroness Rothschild, "Silvery white tinted pale blush," by another a "Rich and lovely shade of pale pink," and by a third "Satiny pink."

General Jacqueminot, "Brilliant scarlet crimson," by another "Rich velvety scarlet changing to brilliant crimson," and by a third, "Rich crimson color."

La France, "Splendid satin rose and silvery rose," by another "Lovely shade of peach blossom changing to amber rose tinged crimson," and by a third "Peach blossom pink."

Mabel Morrison, "Pure snow white sometimes tinged with pink," and by another "Pure white."

Madame Gabriel Luizet, "Fine satiny rose," by another "Clear coral rose, beautifully suffused with lavender and pink," and by a third "Delicate silvery pink."

Mrs. John Laing, "Soft pink," by another "Clear bright pink exquisitely shaded," and by a third "Exquisite shade of steel pink."

Hermosa, "Light pink," by another "Beautiful clear rose," and by a third "Bright silvery rose."

American Beauty, "Deep crimson color," by another "Dark rich crimson," and by a third "Deep brilliant pink shaded centre rich carmine."

Catherine Mermet "Rich salmon pink, also rosy pink," by another "Clear shining pink with delicate shaded amber and fawn centre," and by a third "Clear rosy pink," also "Rich salmon pink."

Pierre Guillot, "Bright dazzling crimson passing to carmine," by another "Bright dazzling crimson passing to brilliant carmine," and by a third "Brilliant crimson."

Souvenir d' un Ami, "Delicate rose

shaded salmon," by another "Deep rosy flesh beautifully shaded with rich silver rose carmine," and by a third "Dark salmon pink, shaded silver."

W. Francis Bonnett, "Most brilliant crimson," by another "Intense dazzling crimson," and by a third "Most brilliant crimson."

Bon Silene, "Deep rose," by another "Deep rose color, sometimes bright rosy crimson, occasionally pale light rose," and by a third, "Glowing carmine rose."

Ma Capucine, "Dark orange color," by another "Golden amber, delicately tinged with peach and fawn," and by a third "Dark orange color tinged apricot."

Les roses des Jardins, "Rich cream, rich golden shades," by another "Clear golden yellow, rich and beautiful," and by a third "Grandest yellow."

Safrano, "Bright apricot yellow changing to orange and fawn," by another "Bright apricot yellow changing to orange and fawn sometimes tinted with rose," and by a third "Buff tinted apricot yellow."

Daisy Neyron, "Dark rose," by another "Bright shining pink," and by a third "Clear dark pink shade 1 carmine."

Captain Christy, "Deep flesh color," by another "A lovely shade pale peach deepening in center to rosy crimson," and by a third "Delicate flesh color."

Magna Charta, "Bright pink suffused with carmine, also deep rose shaded light yellow," and by another "Clear rosy red beautifully flushed with violet crimson," and by a third "Bright dark pink."

Papa Goutier, "Bright rose color shaded yellow," by another "Bright Cherry red passing to rich glowing crimson."

Sweet peas are described as being a "Grand blue," and Pansies as being "Beautiful blue." We have seen both of these flowers with all the shades from a light lavender to the darkest shade of purple, but we cannot call to mind ever seeing them blue.

(TO BE CONTINUED.)

A Giant Fuchsia.

Our illustration is from a photograph of an immense specimen of the Black Prince fuchsia, grown by florist W. L. Morris of Des Moines, Iowa. The plant is four years old, nine feet high, twenty-two feet in circumference, trunk eleven inches in circumference, and bore fully 3,000 blossoms at the time the photograph was taken. We can well believe the statement that the plant was a magnificent sight when in flower, with bloom. As shown in the illustration, the "tree" was planted in the center bed and the roof will have to be raised to permit further upward growth.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXI.

DUTIES OF WITNESSES, ETC.

Ha ha ha! you seem out of place among your flowers this morning. They are enjoying the warmth and sunshine while you look as if a thunder cloud would suit your complexion better. Out of humor are you? Well, unbosom yourself. What has happened? Has your boy drowned those delicate imported chrysanthemums? Or has he burned up your colons? Nothing of the kind, hey? Subpoenaed are you? And right in your busiest part of the season. Well, turn that spray on your own head for a few moments and listen to reason. So you are to be called in to testify as to the value of certain floral decorations furnished by a rival house.

A GIANT FUCHSIA.

Good, that calls for an expert opinion and you have the right to charge for your time. It has taken you years to acquire your knowledge of flowers, decorative plants, etc., and whoever uses your knowledge must pay for it. What you ought to charge? Why, the full value of your time of course.

Yes, if you don't mind I'll talk to you

about the duties of a witness. Every business man is liable to be called upon to give evidence in a court of justice and he should know something about the law on the subject. Bear in mind that an expert witness is called to "instruct" the court, and that an ordinary witness is merely to inform the court and jury of the facts without the expression of any

opinion whatever. The difference is great. As a general proposition I would say to you: Be neither an eager nor an unwilling witness, either extreme is bad, and above all don't put any feeling into the matter. What judge and jury want is the facts laid bare of all opinions and speculations. These only serve to befog the jury.

WELL ARRANGED WREATH

For instance, if you are asked whether a customer sent for a certain basket of flowers. You answer in the affirmative, the next question is: How do you know? You reply that he left the order with one of your assistants. Now, you perceive you are here testifying to a matter of which you have no personal knowledge. Personal knowledge is a necessary factor in all legal evidence. Everything outside of this is hearsay.

Never attend court as a witness unless you are duly subpoenaed and your fee as a witness handed to you. It is your duty then to be present at the opening of court and to remain in attendance until dismissed by the attorney who calls you.

Both sides have the right to subpoena you, but the same side can not both examine and cross-examine you. A party

is bound by the utterances of his witness, still he may prove that his witness was mistaken on any certain point.

Before going to the stand you are either compelled to make oath or affirm. You ask me what the effect would be if it turned out the book was not a bible. I answer that it would not invalidate your testimony.

Some people have an idea that they may legally suppress the truth. That is a great mistake. The maxim is that a suppression of truth is an expression of falsehood. You are entitled to a fee for each day's attendance at court.

A physician's certificate will excuse your non-attendance. A sick person, or a person about to leave the country may have his testimony taken by what is called a commission, that is the two lawyers

attend with an officer appointed to take down the evidence, or else questions are written out and sent to a notary to be put to the witness.

You ask whether upon the re-trial of an action the same evidence may be used again. I answer not unless the witness is again present. Then it may be read to him and accepted if he makes no addition or explanation.

Now the law doesn't expect anything unreasonable of a witness, for instance, to remember a date or the words of a conversation ten years after. You may always refresh your mind by looking at any memorandum made at that time.

You want me to explain whether a man is bound by his own receipt. A receipt is not absolute evidence, it is liable to be explained away. I need not tell

VARIOUS FLORAL DESIGNS.

you how easy it is for a business man to part with a receipted bill and not get his money. Your messenger is stupid and leaves the receipted bill. Here is a chance for a dishonest man to try to avoid payment, for you might find it impossible to explain away that receipt.

When you are called to prove the correctness etc. of a bill of floral decorations sold and delivered, if you have a keen lawyer he will not permit you to testify to anything more than just enough to make out a case.

Don't be in a hurry to answer the plea

of the defendant. Wait until he makes known his objections to the bill as rendered. That will be time enough to meet them.

It will often roil you to hear an honest bill called into question, but keep calm and collected, show no temper. If, how

ever, you know through your attorney that the defendant intended to claim that your bill for floral decorations was exorbitant, then you must have expert witnesses on hand to swear to the value of such merchandise. Your own declaration as to their value will not be sufficient.

In the direct examination your lawyer will not be allowed to "lead" you, that is to put words into your mouth. For instance, not to ask, Didn't the defendant say to you that he would pay you five dollars extra if you would arrange the floral decorations on the wall? but to ask What did the defendant say? What did he promise to do?

But on cross-examination it is like love and war, everything is fair. The object of a cross-examination is to grind, pulverize, sift and winnow the direct story as told by a witness, and thus to discover whether it is genuine or not, how much is chaff and how much grain, how much sand and how much gold, how much fact and how much imagination.

For example, in your story of the floral decorations you will be asked: Did not the defendant merely say he would try to get you five dollars extra? A sharp lawyer always tries to rattle a witness' temper, so as to make him talk fast and say more than he ought. Be on the lookout for such treatment. For instance, he will ask: Did you not tell Jones that you intended to "stick" that committee for those floral decorations? Didn't you say to Smith, I have put the price up so as to cover all "divvies?"

Don't let these assertions anger you, and yet don't contradict them in too spirited a fashion. That looks bad. Don't reply: It's not my custom to make out a dishonest bill, for that is not "responsive," and you must always be "responsive" when acting as a witness.

Nor should you testify to your own business standing, let others do that. Many a case has been lost by a witness striving to be witty or amusing. Don't attempt it. Once upon the witness stand you are part and parcel of the machinery of justice. You may not refuse to answer a question under any pretext except that it would tend to degrade you or render you liable to criminal prosecution. Under our free government no man is called upon to convict himself.

To prove an account for goods sold you must produce your book of original entry, no other is admissible, and if you didn't make the original entry must have your clerk present with you.

You want to know how old a child must be to give evidence. The old rule was seven years, but now the court will admit the testimony of a child of any age, it's all a question of intelligence, and no cast iron rule exists.

Where there are two witnesses who swear exactly opposite to each other it is for the jury to make choice. Witnesses are weighed not numbered, and a jury may reject the evidence of three men and accept that of a single woman.

If a witness is caught in a single falsehood it damages his whole testimony, unless of course it is a mere error of memory. A good witness is never too exact. That looks suspicious.

Well, I have probably given you some ideas which will be useful to you in your business life. Remember the old commandment: "Thou shalt not bear false witness against thy neighbor."

UNCLE BLACKSTONE.

Various Floral Arrangements.

We present herewith another group of floral arrangements, of which photo-

SHIRLEY HIBBERD.

graphs have been sent us by subscribers from time to time.

We do not endorse all of these designs as models to copy from. In fact in many of them we consider that the flowers have been worse than wasted by being crowded together and robbed of all their grace and loveliness. But we recognize the fact that when such pieces are demanded the florist must supply them or lose a profitable order, and that it will probably be a very long time before the public in general is sufficiently educated to abjure such monstrosities as, for instance, the windmill. The florist should endeavor on every possible occasion to elevate the taste of his patrons, and lead them up to an appreciation of the really beautiful, but he can not afford to attempt to force them in the right direction against their wills, as he depends for his livelihood upon his ability and readiness to satisfy his customers.

The Late Shirley Hibberd.

In the late lamented editor of the London *Gardeners' Magazine* I have lost a very near and dear friend. Our acquaintance began about thirty-five years ago and we soon became intimate friends of kindred spirit and continued as such till the last. In 1861 when he became editor of the *Gardeners' Magazine* it had only a few hundred subscribers, but he imbued it with such vigorous new blood, and impressed upon it such a pronounced stamp of brilliance, wit, humor, and sarcasm together with an intimate and superior knowledge of practical floriculture and horticulture, that the magazine rose,

almost immediately, from its low ebb to a swell tide, and took rank as one of the leading English horticultural weeklies. Mr. Hibberd himself was reflected in every issue—his keen observations, his forensic thought, his jovial wit, and when occasion required, his withering sarcasm, all were there.

Not only was he the editor of a great magazine and the author of many works on garden topics, but he also was an excellent practical cultivator of plants, and an earnest hybridist and experimenter with them. Zonal pelargoniums were one of his hobbies, but most other florist's flowers also received due attention. His collection of ivies was the most complete in the world, and his monograph on ivies is a very valuable book.

He was likewise much interested in growing and testing vegetables—potatoes especially. The varieties of potatoes known as Alpha, Model, Sextus, and Champion were named by Mr. Hibberd from among a collection of twenty varieties that I raised from seed and sent to him for trial.

JOHN THORPE.

Well Arranged Wreath.

The wreath illustrated was arranged by C. B. Whittall & Co., of Milwaukee, and we are indebted to them for the use of the engraving. The arrangement is certainly very graceful and effective, and we feel assured that those of our subscribers who have been asking for illustrations of well arranged examples of designs most commonly called for, will find an useful suggestion in the wreath shown.

CHRYSANTHEMUM WABAN.

Chrysanthemum Waban.

This is a new double pink after style of Robt. Crawford but more double, more incurved and broader petals. Awarded certificate at Philadelphia in November last.

The Cineraria.

In your December 11 issue of the AMERICAN FLORIST you quote a note of Mr. J. Douglas' from the *Gardeners' Chronicle*. Mr. Douglas gives a very interesting account so far as the cultivation of it in England is concerned, but there is a sentence or two in it that I think requires qualifying. It is an old saying that doctors often differ, but in this case the difference in climate might be the cause of our opposite views on the culture of the cineraria.

The first sentence to which I refer is growing cinerarias from offsets of the old plants after they are through flowering. Now it would be almost impossible for them to survive our summer heat. Here the most successful way to grow them is from seed sown anytime from the latter

part of July until the middle of August. If sown during this time you can have a very good showing by the middle of February, providing you give them anything like good treatment.

The seeds should be sown on the same plan as most annuals are. A cold frame in a somewhat shady place would be the most desirable position for them to germinate in. After they have made one or two leaves, they might be potted into small pots and set back into the cold frame again keeping them a bit close for a day or two until they revive from the check, which they may receive. After this they can be uncovered on all favorable days, excepting in very severe storms, until about the time we are going to have a frost, then it is advisable to bring them into the cool greenhouse where a temperature of 40° to 45° is maintained. Here they are very liable to get infested with green-fly, but a mild fumigation with tobacco stems two evenings a week will be a preventive of any increase of it. You must give close attention to the foremost growing plants, never allowing them to get pot bound until you have put them into their flowering pots; then after they

are well rooted a watering about three times a week of liquid manure will help them greatly to make the flower scapes more perfect.

When they are through flowering it will be found cheaper to throw the old plants away than to trouble otherwise.

Summit, N.J. PETER MACDONALD.

Chrysanthemum Seed.

To ripen chrysanthemum seed, give the plants all the sun possible, keep the temperature about the same as for roses and in watering avoid wetting the blooms. The seed must be set either by insects or hand, this is done by dusting the stigmas with pollen, these are thickly studded all over the center of the flowers, besides one at the base of each petal, tubelike petals can be gently torn open to reach it.

Many kinds ripen their pollen before the stigmas are ready to receive it, this gives us and the bee-fly a chance to do some crossing. Perfectly double flowers make very little pollen, and the stigmas are so hidden among the petals that they do not set seed without artificial aid

unless the petals are cut off short, and not always then.

Early varieties begin to ripen seed about the middle of December. The seed can be sown as soon as ripe. It does not take long to germinate. RICHARD BAGG, Bridgeton, N. J.

Magnolias.

Among hardly deciduous shrubs for florists' use there is a bright future for some of the magnolias. Not only are they indispensable as outdoor hardy shrubs, but for forcing as we do lilacs or deutzias, and the only thing that stands between them and general use is their, as yet, comparative scarceness.

The most eligible kinds for forcing are *M. stellata* (Halliana of some growers) and *M. conspicua* (Vulan) and *M. obovata* and their varieties and hybrids. These are deciduous species, hardy, free flowering, showy and among the earliest plants to bloom in spring; they set their flower buds the year before and after a decided rest are on the quiver for the first best of balmy spring weather to rush into bloom. Such susceptible plants are always easily forced. But they are too valuable to force and then as soon as they have done blooming pitch them out as one would a deutzia. If kept in good condition they can be forced every second year. Among white flowers what could be more showy than *Magnolia conspicua* in winter?

Magnolia stellata is a very bushy, dwarf species from Japan, and one of the easiest to transplant. Its flowers are white, very abundant, fragrant, somewhat small compared with magnolias generally, and the petals after a few days become reflexed. It is the earliest to bloom of all the magnolias, opening its flowers here in the second week of April and long before the leaves appear on the bushes. Plants only a foot high bloom freely.

Magnolia conspicua or Chinese *Vulan* is a much larger plant and has stiff, upright, pure white, large fragrant blossoms that appear about the middle of April. The waxy petals are easily damaged outdoors by wind or rain storms, but under glass their purity and perfection are assured.

Magnolia obovata is a Japanese species and the one so common in old gardens, although beautiful in its way, it is, in my opinion, so far behind *Soulangeana*, *Lemni*, *speciosa* and other of its offspring, that I would give these the preference.

Magnolia parviflora is a delightful species, but later blooming and too expensive to handle in quantity. Its variety (?) "minor" has the same advantages and disadvantages. *Magnolia Kobus* is of no use; it is exceedingly shy and its blooms are small. Our native *M. glauca* and its variety *Thompsoniana* bloom a little later and are neither profuse nor showy enough for greenhouse work.

The large leaved magnolias *M. umbrellata* and *M. macrophylla* are splendid out of doors, but too big for the greenhouse; and the same is the case with the rare and grateful *M. hypoleuca* from Japan. By the way, this species *hypoleuca*, blooms abundantly with us every year. Out of all question are *M. Fraseri* and *M. acuminata* for they are timber trees; and although *M. cordata* also assumes the proportions of a middle sized tree, it blooms while quite a small bush, and it blossoms twice a year, but its flowers are not showy.

Magnolia grandiflora, the grandest species of the genus, is only at home out

doors and in the south. Next to *M. grandiflora* ranks *M. Campbellii*, a species indigenous to the high mountains of Sikkim and Bhutan, but it is not hardy here and seems to be ill at ease under any circumstances. We have it but bring it indoors into a pit over winter.

The delicious little *Magnolia fasciata* is a favorite garden shrub in the southern states and greenhouse plant in the north.

W. F.

News Notes.

SOUTH FRAMINGHAM, MASS.—W. S. Phelps & Son the florists are settling under an assignment.

VERNON, TEXAS.—C. A. Weidigen has started a florist business here with two greenhouses 10x60 each.

TORONTO, ONT.—There was a large attendance at the monthly meeting of the Gardeners' and Florists' Club held on the 10th inst., and a long list of applications for membership was considered and accepted. A special meeting will be held later in the month.

SAN FRANCISCO—At the regular monthly meeting of the California State Floral Society, held on the 12th inst., the California golden poppy was selected as the state flower. The managing committee of the recent chrysanthemum show reported that a surplus of \$227 would remain after the payment of the premiums. The chrysanthemum will be discussed at the next meeting.

BALTIMORE.—At the meeting of the Florists' and Gardeners' Club held the 8th inst., Mr. John Donn read an excellent essay entitled "Chrysanthemums; their propagation and subsequent treatment." The report on the recent chrysanthemum show announced total receipts of \$1,376.15, and a balance after paying all expenses, of \$535.47. It was suggested that the club give a two-days show next spring and action upon same will be taken at next meeting.

CAIRO, ILLINOIS.—The Ohio and Mississippi Horticultural Society met at the Halliday House December 8 and adopted a resolution to disband. The society was composed of fruit-growers from Tennessee, Kentucky, Missouri and Southern Illinois, with Thomas Buckle of Villa Ridge, Ill., president, and Dr. Dubois of Cobden, Ill., secretary. The purpose is to organize in its stead a Southern Illinois Society, to be under the jurisdiction of the Illinois State Society.

BUFFALO.—At the last meeting of the Florists' Club, held on the 9th inst., the principal event of the evening was the presentation of an elegant gold watch to Secretary Daniel B. Long by the other members of the club. The presentation address was made by President Scott, in which he said that the club felt itself deeply indebted to Mr. Long for the interest he had shown in the club and its undertakings and in the time he had given to the getting-up of the late flower show to the neglect of his own business. The members in making this presentation, he said, were only recognizing in a small way the obligation they were under to him. Mr. Long replied that he had done the work gladly and without any thought of the cost. He was deeply interested in the profession and was willing to do what he could to push it forward. A spirit of liberality was, he felt, as necessary to success as it was a pleasure to those engaged in the business.

Echoes From Philadelphia.

Robert Alphabet Kift has topped the score so far on the new bowling alley. He now swings to the tune of 211—two hundred and eleven!

The crops of Hybrid roses have not been satisfactory up to date this year. One crop of Mr. Lemuel Ball's is quite over. Some of them were good flowers, but the majority of them were comparatively short in the stem, and were not perfect in form. Most of the florists who had to sort them over the counter were very much dissatisfied with them. The variety was Mrs. John Laing. It seems to be useless to attempt to force this rose very early for this market, for, unless it is managed very nicely it will not give grower, retailer, or customer much satisfaction. There is only a limited demand for high-priced roses, apparently, here before Christmas. Mr. John Burton's first and second batches were not nearly so good as they were last year. Mr. George Anderson expects to have a house in for the holidays.

There is more demand for *Mme. Cusin* and *Mme. de Watteville* than formerly. It took "Cusin" some time to make the desired impression on conservative Philadelphia, but it seems now to be a fixed favorite for some time to come.

Some fine *Mme. Hostes* are being cut by several growers, but there seems to be a disposition to frown upon it by some of the city florists. It is ideal in form, but the trouble seems to be with the color. Its being a new rose may have something to do with the prejudice that there seems to be against it.

The greatest novelty for Christmas presents from a horticultural point of view this year are some miniature trees from Japan, a species of *arbor-vitae* and pine. H. A. Dreer and Evans & Battles had them, and very unique and beautiful they are.

Growers can not say "no sun" this season, for it has been the brightest December that can be remembered by those who take note of these matters. Consequently the indications are in favor of a fair supply of flowers for Christmas.

Amongst carnations "Grace Wilder" is still the favorite. J. W. Colflesh still grows "Mrs. Cleveland" and "Century," but he has had to part with *La Purite*. August Muller speaks very highly of "Wm. Swayne" as a good flower and an abundant bloomer. He likes it better than "Peter Henderson." John Savage has "Himze's White" looking fine, so also are his *Grace Wilders*. Bilger & Company have as fine a lot of carnations as one could wish to see. Thos. Butler speaks highly of *Portia*. The demand for carnations seems to be continually on the increase, and this does not surprise us for it is second only to the rose for general usefulness. L.

Awards at Exhibitions.

Is it not rather painful to the readers of the FLORIST to see this squabble over the prize on standard flower pots awarded at the late Boston exhibition continued, even if in the advertising columns?

Only one could win the prize. I have never bought any pots of Hews & Co., but I do not see the least reason why they should not be able to make as good standard ware as The Whilldin Pottery Co. Would it not be best to let bygones be bygones, and for the S. A. F. or any other organization holding an exhibition to take steps to prevent any recurrence

MAGNOLIA STELLATA: FLOWERS WHITE, WITH YELLOW ANTHERS.

(REPRODUCED FROM GARDENERS CHRONICLE)

of a like trouble. Let me suggest here a few rules which it might be well to adopt.

1. The first day of the exhibition should be set aside for the judges to make their awards. Nobody but the judges to be admitted.

2. No names of exhibitors should be attached to their exhibits until the prizes have been awarded.

3. No appeal should be permissible after an award has been made. Any grower who takes his growls before the public should be forever debarred from competing for a prize again.

I do not think it necessary to comment on any of these rules for their merits must be obvious. I would further suggest that the S. A. F. authorize cards to be printed, on which are given the standard measurements of standard flower pots, said cards to be sent for a consideration to all who apply to the secretary

of the society for them. Not only should the inside measurements be agreed upon, but also the width of the rims should forever be uniform. I find these rims a great aid in counting pots. All I have to do is to pile them up in columns of equal height and multiply the number of columns by the number of pots in one. If any brother florist can improve on my suggestions let us hear from him.

CHAS. EVERDING.

Catalogue Premiums Offers and the "Lottery Laws."

ED. AM. FLORIST:—If newspapers containing advertisements offering prizes, gifts, etc. or even publishing the names of those receiving such prizes, are not allowed through the mails, what will be done with florists' catalogues containing

such offers? Will they not also be shut out? Is it not time (if not already done) for catalogue men to look the matter up, as many thousands of dollars may be wasted by the sweeping ruling of the postal authorities in their attempt to enforce the "Lottery Laws." I have seen no reference to the matter in the FLORIST and thought it might be well to get those posted to throw some light on the matter at once for the general benefit.

Again the thought occurs, is not the premium business overdone? Why not mark the goods at a fair price and dispense with premiums? One firm tries to outdo the other in premium offers, till the goods are almost given away. Many retail catalogues offer rates, premiums deducted, that are much lower than ordinary wholesale rates for same stock by same firm.

COLOR.

In this issue we give the first instalment of a very interesting and valuable article upon color, by Mr. H. H. Battles. The article is the result of several years' careful study of the subject, undertaken at our request and as will be noted it has been prepared with special reference to the colors of flowers. That it contains information of very great value to every member of the craft we are fully assured and we trust that every reader will avail himself of this opportunity—never before presented in a horticultural publication to acquire some familiarity with the subject of the article. It must be admitted that as a class we are lamentably at sea in our color-nomenclature; possibly not more so than many other classes, but in our work exactness is more a necessity than in that of most professions. We consider the article on color as one of the most important we have ever been privileged to lay before our readers and believe that it will be appreciated as a Christmas present of decided value.

In accordance with our suggestion Mr. Battles has also prepared a chart of colors, in which 234 colors and shades of color are given in dyed fabrics, water or oil colors, each carefully named, the nomenclature conforming as nearly as possible to the popular idea of colors as ascertained by careful investigation and comparison. This chart Mr. Battles has also sent us. We aim to use it in some way to benefit our readers, but just how has not yet been decided. At one time we intended to select a number of the principal colors and shades of color used in the descriptions of flowers for a chart, have the same lithographed in colors and publish it as a supplement to the AMERICAN FLORIST. Unfortunately the accuracy which is demanded to make the chart of real value can not be secured except by running the sheet through the press as many times as there are colors or shades of color to be shown, which would make the expense enormous. But the great value to the whole trade of such a chart may induce us to incur even so heavy an expense if we can find no more economical way of securing the accuracy which we positively must have. As to the convenience and importance of a standard which would always be at hand for reference, certainly no question will be raised.

DID YOU EVER, while travelling by rail in the summer time, and especially in the spring, note the immense number of different shades of green in the foliage of the trees by which you are surrounded? If not, next time you travel through a wooded country, do not fail to watch carefully and endeavor to count the different

shades of green that meet your eye. And if you have not before given thought to the matter, you will be amazed at the apparently endless number of differing shades. Then you will realize that in the arrangement of foliage there are contrasts of color as well as contrasts of form.

Do you mention this paper when you answer an advertisement? The FLORIST is read and paid for by every live man in the trade and really pays the advertiser; but does he know that this paper does the work when you as a buyer fail to tell him so? Will you, kind reader, do us a good turn, which perhaps we deserve for doubling the issues of your paper, by saying every time you write, that you saw the adv. in the AMERICAN FLORIST.

EVERY FLORIST in America whose trade is worth having is on the subscription list of the AMERICAN FLORIST and receives this paper regularly.

Society of American Florists.

The following letter has been received by President Norton:

M. H. NORTON, Esq., Vice-President
Society of American Florists, *My Dear Sir:*—The members of the family of the late Mrs. Francis B. Hayes desire me to express, through you, to the members of the Society of American Florists, their sincere appreciation of your sympathy in her loss, so fittingly expressed in the chaste and most choice floral tribute sent to her funeral. Sincerely,

WM. POWER WILSON.
Boston, Dec. 13, '90.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

More About Advertising.

EDITOR AMERICAN FLORIST.—The receipt to-day of *Printer's Ink* for December 17, wherein is reprinted in full our article entitled "Some Facts and Figures," together with the complete tabulated statement of the returns from forty-eight papers, taken from the AMERICAN FLORIST of November 5, reminded us that there are several explanations which we should make relative to this self-same table. Right here permit us to say that the writer has been considerably criticised for preparing for publication any such list or table of returns. One advertising agent tells us that wherever he goes soliciting seed advertising he is confronted with this table, and that in one case where he expected an advertisement for *Popular Gardening* the seedsman, on looking up the list, said: "Why, that cost Mr. Burpee apparently \$1.32 for every applicant; altogether too high." Now it is just such misunderstanding of the table that we wish to prevent, for we would not intentionally do any first-class paper an injustice. None of the papers have complained to us about the publication of the statement, but two others have inquired why we omitted their names from the list. To these we replied, for the very good reason that the publication of the figures showing the apparent cost of these two mediums would necessitate a very lengthy explanation and might work to their disadvantage. Now for fear of like reaction to the injury of such excellent papers as *Popular Gardening*, *Orchard and Garden*, *Ohio Farmer* and *American Cultivator*, in none of which is the apparent cost less than \$1.21 per applicant, we think we should enter upon this explanation.

All advertisers know that the readers of some papers are more thoroughly trained and more continually urged by the publishers to name that paper in writing to advertisers, but further than this, in such a case as the paper first named, *Popular Gardening*, of which we have shown our own appreciation by engaging 500 lines for this winter's advertising a goodly proportion of the readers, being amateur and professional gardeners, are already on our list and receive our catalogues without applying, consequently while we do not secure as many new customers from advertising in what might largely be termed "Trade Journals of our own Trade," yet it is equally as important, if indeed not rather more so, for us to keep our announcements prominently before the readers of such. As a good illustration of these points we may mention *The Country Gentleman*, which was omitted from our list for the very good reason that of all the tens of thousands of postal cards and letters applying for our catalogue last winter not one could we find mentioning *The Country Gentleman*, and yet there is not a weekly published that we esteem more highly as a valuable advertising medium; ever since 1875 there has not been published a single issue of *The Country Gentleman* in which our advertisement of ten lines or more has not appeared. The very fact of this familiarity of the readers of that paper with our firm and business operates

against their naming the paper as a seemingly unnecessary adjunct to their application. Furthermore we have thoroughly improved the value of *The Country Gentleman* as an advertising medium several times each year, by the insertion in it of special advertisements of certain articles for sale which were not advertised in any other paper. In our last advertisement of this character, of Scotch Collie dogs, we had to write to the editor requesting him to announce the fact that we had already received more inquiries and orders than we could accommodate.

We think the table should save many hundred dollars to seed advertisers, in teaching them to avoid literary weeklies and monthlies that circulate mostly in cities and towns, although so valuable for other lines of advertising, but we trust that the explanation we have made will prevent any of our friends in the trade from omitting from their spring advertising such mediums as those mentioned above. It will be remembered that in our article we stated distinctly that it was only a partial list of papers, but that the proportionate cost of returns was identically the same as from all papers in which we advertised.

In giving you this table for publication we purposely omitted one or two exceptionally productive mediums in the way of mentioning papers, for the reason that should we publish them it would seem as if the entire list was being made use of as a lever to boom one or two special publications. Being thus careful, we did not anticipate that the list would be published outside of the AMERICAN FLORIST, but we find it has already been used in circulars issued both by the *Farm Journal* of this city and the *Farm and Fireside* of Springfield, Ohio—these two papers showing the lowest cost of any on the list of those published. We are quite willing that both of these papers should derive whatever benefit there-published of this list may give them, as they are certainly most excellent mediums and among the longest of the best dozen known to us to-day, but we would be very sorry if the wider publicity thus given should work to the injury of other good papers.

There is another point upon we have intended for some time past to write you: In the first article in your issue of October 15 the writer maintained that Mr. Powers was wrong, as far as seed advertising is concerned, in advocating a change of advertisement with every issue of the paper, but the writer prefaced his remarks by the statement that, "The one lesson which has been most strongly impressed upon the seed grower is how little we really know about advertising."

Now the very fact of preparing these two articles had its effect in concentrating the writer's thoughts to a greater degree upon this winter and spring's advertising, with the result that we have decided to a certain extent, and in some papers, to try the efficacy of Mr. Powers' suggestion. A recent advertisement of Messrs. N. W. Ayer & Son, in which they started with the headline as follows: "Our customers advertise FOR REVENUE ONLY," suggested to the writer a series of political advertisements; this was followed with several others until now we have electrotyped seven different advertisements, each advertising our catalogue in space of two inches, single column, but each different both in wording and heading. We think it only right that the readers of the AMERICAN FLORIST who have followed our articles on advertising should have the opportunity of knowing just what we are doing ourselves in this

line. We have, therefore, expressed to you to-day these seven different types, the first of which you will please insert simultaneously with the appearance of this article, and then continue each week in the order named below, which will serve as an index to those of your readers who care to follow them as they appear in your advertising columns:

"FOR REVENUE ONLY," "FREE TRADE," "PROTECTION," "CHOICE VEGETABLES," "GOOD SEEDS," "TO HOLD," "SATISFIED."

In addition to these advertisements we have prepared, particularly for papers that print indistinctly, a fifteen-line double-column advertisement, in which we use only fourteen words in bold type, offering our farm annual for 1891. In some of the leading papers we will also insert display advertisements of special flower seed novelties. We have thus plainly announced our plans for advertising this winter that your readers may see how thoroughly we believe in the statement that "advertising is by no means an exact science," but is largely experimental.

In reference to the experimental side of advertising we have been much interested in the publication this week of various prize advertisements in *Printer's Ink*, sent in competition for the \$500.00 offered by Messrs. Geo. P. Rowell & Co. for "the advertisement best calculated to bring business" to them. We have responded favorably to Messrs. Rowell's question, "Why don't you have a prize advertisement prepared?" and have today sent to *Printer's Ink* an announcement of two prizes of \$50.00 and \$25.00 each as per copy sent you herewith, for the two best advertisements that may be prepared and submitted to us descriptive of our seeds prior to February 1, 1891.

Now competition for these two prizes is not necessarily confined to the contributors of *Printer's Ink*, but any of your readers who think they would like to try their hands at writing another's advertisements can enter into the contest. By the time the seven advertisements sent you to-day have expired we will probably be in possession of these prize advertisements, and expect then to order their insertion

WE WANT

A PRIZE ADVERTISEMENT

TO SELL SEEDS
AND WILL PAY \$50.00 FOR IT.

We have good seeds—there are none better—and we have always told the truth about them—with the result that we annually supply many thousands of planters, direct through the mails. But while no one can see us as we sell we do, doubtless there are those who can write more "selling" advertisements about our seeds than we can ourselves. We have, therefore, decided to offer a prize of \$50.00 cash to the person who can best calculate to bring business to us. No advertisement to be larger than 5½ inches double column and all copies in competition to be received by February 1st. The advertisements can either be plain or illustrated and our *Farm Annual* for 1901 describing our business and seeds will be sent to all competitors who request it. We will also send, if desired, proofs of advertisements prepared by ourselves for present use, these may even "crude" to some professional writers, but will give every facility toward the preparation of better. We will pay the \$50.00 or before Feb. 1st, 1891, and should there be a second advertisement also of special merit we will gladly pay an additional prize of \$25.00. We reserve the right to keep for our exclusive use any other advertisements sent in competition, which may appear attractive upon the payment of \$5.00 (five dollars) for each advertisement so retained.

In the matter of illustrations, the competitor can clip any cut from our catalogue or design a new subject. The illustrations will be allowed the awards will be entirely impartial and, as far as possible, unprejudiced by old ideas. In deciding upon the winners of the contest we will be taken into consideration; the first and second prize-winners will be announced in *Printer's Ink*. W. A. J. E. Seed Growers, Philadelphia, Pa.

in your columns, where your readers can see what are the results of this novel prize contest.

Before closing this third paper we would desire to emphasize one fact, and that is that we think the aim of newspaper advertising should largely be to create new trade and that there can readily exist the most perfect good fellowship between rival advertising houses. For are we not all aiming either to educate the masses into a love of flowers and of gardening, or to draw farmers and gardeners away from the commission seed boxes at the corner grocery, and get them into the habit of using the mails for their supplies of seeds?

W. ATLEE BURPEE.
Philadelphia, Dec. 17, 1890.

BOSTON.—Mr. R. Farquhar, father of Robert, James and John Farquhar, the South Market seedsmen, has just arrived here from Scotland. For nearly half a century Mr. Farquhar had been gardener at Fyvie Castle, Scotland. He was a specialist in the cultivation of the potato.

SECRETARY JOHN FOTTLER, JR., of the American Seed Trade Association, has called a meeting of the Executive Committee at Boston, January 10.

Springfield, Mass.

Mr. H. Groat of this city has an unnamed seedling carnation which is a bright magenta and which measures over two and one-half inches in diameter, being very double. Another unnamed seedling is pink, very much like Mrs. Cleveland in color, form of bloom and habit of growth. There has been a large amount of large floral work executed here lately, most of which has been done by Miller Bros. Among them are two pieces of special merit, a roll of honor four feet high, made of Niphetos roses and Romans with a diagonal line of wheat. The sides were of pansies and the roll of Perle roses.

Boston.

Trade in Christmas greens of all descriptions has been very brisk this year. Mistletoe, both domestic and imported, has in consequence of more careful attention to packing arrived in much better condition than heretofore.

Holly has been generally of good quality, well berried, notwithstanding the unfavorable reports from some of the holiday sections.

Long needle pines are gaining rapidly in favor. They have had an uphill job since their first introduction into this market a few years ago, but are now accepted and demanded as a leading article in decorative stock, not for Christmas alone, but for large decorations of all descriptions during the winter months. There has been a largely increased demand for small berry bearing plants, especially the scarlet fruited varieties such as ardisias, solanums, etc., well furnished plants selling at sight regardless of price. Diminutive orange trees, bearing fruit, have also been in great demand but difficult to find.

The most unsatisfactory feature of the holiday business this year has been the very general and serious delays on all the freight lines. Complaints come from all sides, and many have been the disappointments and annoyances to both wholesalers and retailers.

During the week preceding Christmas week while the greater part of the eastern half of the United States was deep buried in snow, Boston was entirely exempt. It was a singular and somewhat humorous condition of things to receive here in Boston, while the streets were dry and the skies clear, telegrams from North Carolina and Virginia, hundreds of miles to the southward, stating that it was impossible to fulfil mistletoe contracts on account of the heavy snow drifts.

Chrysanthemums.

"THE WORLD'S FAIR SET."

We have been to great expense, sparing neither time or money in collecting this unequalled set. Characteristic of the leading city of this country, we have named them in honor of our representative citizens:—FERD W. PECK, or GALLIA, and J. V. FARWELL, or W. M. RUDD, were two of the set of six seedlings that took the \$100 prize at Indianapolis; S. W. ALLERTON and GEO. R. DAVIS were raised by Monahan of Philadelphia, who has originated some of our finest varieties. CYRUS H. MCCORMICK was raised by Jamieson, and is one of the finest of the present year's novelties. The remaining eight are the XXX selections of 1800 seedlings that were raised by the leading grower of this country. In comparing them with the different sets sent out this year we unhesitatingly say that they are second to none.

LYMAN J. GAGE, a grand late white.
GEO. R. DAVIS, ox blood red. Wheeler type.
J. V. FARWELL, Lavender without, rosy violet within, a fine keeper.

CYRUS H. MCCORMICK, Dark deep yellow, shaded bronze red.

ANDREW McNALLY, Crimson scarlet, fine for exhibition.

POTTER PALMER, White, seedling from L. Canning, very large.

FERD W. PECK, Rosy pink, fine exhibition variety.

CHAS. H. WACKER, Crimson scarlet, profuse bloomer.

ROBT. A. WALLER, Chamoise yellow, extra.

CHAS. T. YERKES, Bright scarlet and gold, fine cut flower variety.

S. W. ALLERTON, An immense white, fine for pot culture.

MARTIN A. RYERSON, An improved Mrs. Frank Thompson.

FRED S. WINSTON, Cardinal and Indian red of the Carnegie type.

SET OF 13 FOR \$6.00.

Orders booked for the above and also 100 of the leading exhibition and cut flower varieties to be delivered early in January. Send for descriptive list. "Get the best, grow the best, and keep up with the times," is our motto.

VERBENAS.

Price, \$2.00.

AMERICAN FLORIST CO.,

54 La Salle Street, CHICAGO.

New York.

Business rather quiet. There is an abundance of all kinds of flowers and the prospects are that we will have a good supply for the Christmas trade. As yet there has been very few large orders received by the florists for Christmas flowers. Poinsettias will be a favorite flower for large decorations. Pink bouvardia is being used extensively for dinner table decorations. Julius Roehrs of Carlton Hill is cutting some very fine Magnas and Alexis.

Chas. R. Christy of Stamford, Conn., the noted La France grower, says his crops were never so satisfactory as they have been this season.

Charley Anderson of Flushing claims the new rose Waban will become a favorite in New York.

At Mrs. Astor's reception last Thursday some novel effects were shown in the decoration of the house. One of which was an arbor of apple blossoms flanked on each side by small orange trees.

English mistletoe has arrived and is selling at \$25 per crate.

There are also some fine specimens of Golden and Silver Queen hollies from the south of England which sell readily at \$10 each.

The North German Lloyd steamers also brought their share of specimen holly trees from Holland and a fine collection of conifers.

Maine Spruce trees are selling well. South American Mistletoe is scarce.

There were many out-of-town florists here during the week ordering their usual Christmas flowers, and report business quiet throughout the country.

JOHN YOUNG.

Rooted Cuttings of Carnations

of all the Standard Varieties ready Dec. 1st. Having added another 100 "got house to our Carnation Department, hope to be able to furnish any quantity desired, on short notice. Orders for future delivery at a 10 per cent off from catalogue price.

JOS. RENARD, Unionville, Chester Co., Pa.

CARNATIONS.

New Seedling Carnation "Hector," brilliant scarlet; has no equal of its color; ready for delivery January 1, 1891. Catalogue ready December 20, 1890. Also plants from 25-cent pots and Rooted Cuttings of "Mrs. Fisher," the leading white.

Also many other varieties.

R. T. LOMBARD,
WAYLAND, MASS.

Rooted Cuttings Carnations.

We offer **EDELWEISS**, a pure white sport of Chester Pride for the first time this season, @ \$1.50 per dozen; \$10.00 per 100. Send for circular of leading varieties and several new seedlings of merit.

W. R. Shelmire,
AVONDALE, PA.

ANNOUNCEMENT.

Having rebuilt and enlarged my establishment and increased my facilities for propagating and growing plants in quantity, I am prepared to book orders for my leading specialties, from all who read of them, at the usual reasonable rates, among them will be: *Man-Verbenas*, *Trailing Vincas*, *Gem Peperwies*, *Antonie-Gloria*, *Lactaria*, *6-line* sizes, from \$1.50 to \$3.00 per hundred, 50 *Bouvardias*, in 4-inch pots, nice bushy plants budded, all sizes, from mixed \$2.00 per hundred, securely packed, F. O. B.

J. C. GIBSON, WOODBURY, N. J.

ROOTED CUTTINGS.

— Send for Lists. The prices and quality are sure to please. —

CARNATIONS—All the leading sorts. Eight 100 foot houses.

COLEUS—An immense stock. Twenty-four varieties.

GERANIUMS—A choice assortment in mixture, at \$10.00 per 1000.

CANNAS—French and others, and numerous items of interest to florists. A new feature in Smilax culture.

CARNATION NOVELTIES.

Lizzie McGowan, Louise Porsch, Golden Gate, J. R. Freeman, Wm. F. Dreer, Hector, Edelweiss, Angelus, Dorothy, Nellie Rly, Snow Bird, White Wings, May Flower, Orange Blossom, Beauty of Oxford, Emily Louise Taplin, and others are described in my list.

L. B. 338. ALBERT M. HERR, LANCASTER, PA.

Lizzie McGowan.

I beg to announce to the trade that I shall be prepared to distribute this magnificent **NEW WHITE CARNATION** on the 10th of February, 1891, and that the price will be \$12 per 100, and \$100 per 1000, for strong well rooted plants from the cutting bench. Favorable special rates will be allowed on large quantities. Cash or its equivalent should accompany orders from unknown correspondents.

Send for descriptive circular of this and other sorts. Parties wishing a few flowers of Lizzie McGowan can have them by enclosing twenty-five cents in stamps.

ADDRESS H. E. CHITTY, PATERSON, N. J.

LIZZIE MCGOWAN.

I will be prepared to distribute my **NEW WHITE CARNATION** Feb. 10, 1891, and the price will be \$12 per 100, or \$100 per 1000, for Rooted Cuttings propagated from **STRICTLY HEALTHY PLANTS**. Special discount on large orders.

Cash or its equivalent should accompany orders from unknown correspondents. Send for descriptive circular. Parties wishing a few flowers of this **GRAND Carnation** can have them by enclosing twenty-five cents in stamps.

ADDRESS JOHN MCGOWAN,
363 Main Street, ORANGE, N. J.

J. R. Freeman,

This is certainly a grand Winter flowering **CARNATION**, is a seedling of *CENTURY*, fertilized with *ANNA WEBB*; exceedingly profuse flowering and almost all on very long stems. Florets full and very double, does not burst, and is a rich cardinal crimson color, delightfully sweet, clove scented. All who try it will be delighted—many pronounce it the finest crimson they have ever seen.

Strong, healthy plants after February 1st, at \$2 per dozen; \$15 per 100. Special discount on large orders. Sample blooms of this, together with **GOLDEN GATE** and **WM. F. DREER** will be mailed to any address on receipt of 30 cents.

CHAS. T. STARR, Avondale, Chester Co., Pa.

TUBEROUS BEGONIA SPECIAL.

OPEN LETTER TO FLORISTS No. 3.

Dear Sir:—

The Xmas *Garden* seemed to please you very well, judging from your many-fold responses. But the January issue will be still finer. A holly branch in colors adorns the cover.

A 15x16 color lithograph of seedling begonias makes the frontispiece unquestionably the finest floral plate yet issued in America. In fact, this is a **Begonia Special**, many pages being devoted to the Tuberous Begonia by our ablest writers and growers. The superbly illustrated series on **JAPANESE EDIBLE PLANTS** begins in this issue. A splendid assortment of other illustrated matter completes the finest issue of any American horticultural journal up to date. We made you a present of the Xmas issue: Price of this one **20 cts.**, which may be deducted when you subscribe for the year.

Remember our offer to Florists: A commission of 75 cents (net price, \$1.25) if you act as our agent, and order two subs. to begin with, as proof of good faith.

Yours truly,

THE RURAL PUBLISHING CO., Times Building, NEW YORK.

☞ In Club with The American Florist, both one year, for \$2 50

ROOTED * * * * * CUTTINGS FROM CLEAN AND VIGOROUS STOCK.

COLIUS—Eighteen varieties, including Golden Bieder, Verschaffelti, Golden Verschaffelti, Firebrand, Glory of Autumn, Kunray, Peter Henderson, etc. Labeled samples of the set mailed for 20 cents.

VERBENA—Twenty-four varieties, mostly Mammoth. A splendid mixture.
CARNATIONS—Six good cut flower sorts: Portia, Hine's White, Total Wave, Grace Wilder, Buttercup, L. L. Lamborn.

Trade List sent on Application.

Prices and Quality of Stock will please you.

DREER'S DOUBLE PETUNIAS

Now Ready for Delivery, our Select Strain of Double Petunias, in good, strong, healthy stock plants, in 3-inch pots.

The strain of Petunias we offer is too well known to require much description—suffice it to say, that the varieties offered this season are fully equal to our former introductions. The advantage of securing stock early in the season will be readily appreciated, as a limited number of plants will produce a large number of cuttings.

We offer 15 named varieties, at \$1.50 per dozen; set of 15, for \$1.75; \$10.00 per hundred.

Seeds of Double Petunia, from the finest fringed and blotched varieties, saved on our own grounds, crop 1890. Per trade pkt. of 700 seeds, \$1. 25. Our New Trade List, offering all the good things of the season, will be ready early in January.

HENRY A. DREER, Philadelphia, Pa.

NEW FLOWER SEEDS.

Lobelia; Golden Feverfew; Tuberous Begonia, single white, pink, scarlet, yellow and mixed; Verbena; Smilax; Candytuft; Alyssum; Petunia; Asters; Margaret Carnations; Cobaea, etc. Other seeds constantly coming in.

J. C. VAUGHAN, BOX 688, CHICAGO.

BARGAIN GERANIUMS.

PERFECTION, double scarlet; GEN. GRANT, single scarlet. I have a large number of these two varieties, well rooted cuttings, in a fine condition. I must have the room for other stuff, therefore, until sold, I offer at \$8 00 per 1000—cash with order—in quantities of 500 or over.

A. M. C. JONGKINDT CONINCK,

Royal Tottenham Nurseries,

DEDEMSVAART, NETHERLANDS.

Chicago.

Mr. N. Singler, of Washington Heights, has no further use for gardeners who know it all. He now mourns the fact that he has been unable to cut a single violet from a house containing 2,500 plants, simply because he placed the plants in charge of a "know all" who ran things contrary to his usual methods. Nicholas generally gets his violets into the house very early, before disease has attacked them in the open ground, but his smart gardener insisted that according to the improved system they should remain in the open ground until October. Nicholas in one of his few weak moments yielded to the alleged superior wisdom of the walking encyclopedia of knowledge who had placed said wisdom—including some additional service in the shape of manual labor—in his service for a moderate monthly stipend, and the plants were not housed until October. Again there was a difference of opinion, for the man being of abstemious habits himself felt that the violets should follow a good example, and he barely wet their parched throats, in fact the poor plants barely survived the drought which met them under glass. Nicholas kicked but in another weak moment again yielded. Result: An immense crop of violet disease and nary a flower! Not even a measly imitation of one.

But Nicholas didn't get left on his carnations. He has been cutting lots of them, good, long stemmed flowers, and they have all sold at a good price. Silver Spray is his best white. With him this variety produces splendid flowers, and with remarkable regularity. He don't get the immense crops at times as with some other sorts, but the plants keep steadily at work and give him a pretty regular supply of generous quantity and fine quality.

He swears by Tidal Wave as a pink sort. Says it is the best pink carnation ever introduced and the most profitable sort he has ever grown.

He thinks he has in the past propagated his plants for the following season too late, and as he proposes to be good and early from now on, he has already propagated his stock for next season. He finds that unless propagated early he can not be sure of getting in the first heavy crop in time for the holiday season.

Geo. Wittbold says he has 40,000 young palms of the best trade sorts coming on. He will offer them in the Florist as soon as in shape for shipping. He states that he sold no less than 38,000 young ferns through his last adv. in the Florist. Pretty good evidence of the rapidly increasing popularity of these plants, for a few years ago they cut but little figure with the commercial florist in the west.

AMERICAN FLORIST CO., 54 La Salle St., CHICAGO

S. A. F. ATTENTION.

NOTICE RELATIVE TO THE AWARD FOR STANDARD FLOWER POTS.

Many of our friends agreeing with us that the award on Standard Pots at our late Exhibition was an unjust one, we shall use the advertising columns of the *AMERICAN FLORIST* to state our side of the question.

We asked the Executive Committee to give us an impartial committee of award. The following propositions should convince anyone whether **WE FEEL** that we have had such a Committee.

The following is the text of the matter in question, taken from the official programme:

"Manufacturers of FLOWER POTS are notified that a Certificate of highest merit will be awarded to that display of Pots shown at this exhibition, which most nearly approaches the Standard. Such displays shall consist of not less than one dozen of each size, made from working molds and not turned down."

One member of the Committee of Award said that we were not entitled to any award because we exhibited but fifteen sizes, while others exhibited seventeen, and that seventeen cuts were represented on a white sheet of Standard Pots. We fail to see that the award was offered for any specific number of sizes, but that twelve of each size should be presented. **A MUCH MORE IMPORTANT PART OF THE COMMITTEE'S ANNOUNCEMENT** was that the pots should be **MADE FROM WORKING MOLDS AND NOT TURNED DOWN**. We do not hesitate to make this public statement that the Flower Pots to which was awarded the Certificate of highest merit were **VERY MANY** of them **EITHER GROUND, FILED, TURNED or SAND-PAPERED** to size, and for that reason alone were not entitled even to a measurement by the Committee of Award.

WE WISH TO MAKE TWO PROPOSITIONS.

First. We will put up **\$1,000 in Cash** and submit the same pots exhibited at the late Exhibition against the pots exhibited by our competitor, and leave it to an impartial committee of three, and if our pots do not come the nearest to the requirements, we will present the \$1,000 to the fund of the Society of American Florists.

Second. We will put up **\$2,000 in Cash** and produce 500 pots of each size from 1 $\frac{1}{2}$ -inch to 7-inch inclusive, and 250 pots each from 8-inch to 12-inch inclusive, making 7,250 pieces, made from the same moulds in which the pots we exhibited were made, and all shall be of the proper thickness in all respects, against an equal number of pots made from the same moulds that produced the pots receiving the award, and if an impartial committee do not give us the award we will present the money and the pots to the Society of American Florists for an experiment station. And if we are allowed to choose one of the committee of three, we will select our honorable Treasurer Mr. M. A. Hunt, of Terre Haute, Ind.

A. H. HEWS & CO., North Cambridge, Mass.

S. A. F. Attention

Our defeated competitor in "Standard" Flower Pot contest at the Boston meeting, for the **Certificate of Highest Merit**, reflects on the members of the Committee of Award as not being impartial in their decision. The members of that Committee were M. A. Hunt, Terre Haute, Ind., Chas. Henderson, of the firm of Peter Henderson & Co., New York, and Wm. K. Harris, Philadelphia, Pa. No fairer or more competent committee could be selected from the members of the S. A. F., and as far as diligent inquiry reveals, their decision meets with the approval of everyone excepting A. H. Hews & Co.

The official programme gave notice that the Certificate would be awarded to the display "which most nearly approaches the 'Standard,' such display shall consist of not less than one dozen of each size, made from working molds and not turned down." The sheet with drawings of the pots (which was gotten up by A. H. Hews & Co., under the instructions of the Committee of S. A. F. and sent to the different potters for their guidance) shows 17 sizes, and the number we exhibited; one dozen of each, as required. In regard to the statement published by A. H. Hews & Co., that "very many" of our pots were **"either ground, filed, turned or sand-papered to size,"** we wish to distinctly say that this is **FALSE**. The pots we exhibited for the Certificate were made exactly as we make them for our customers, and were not altered in any way whatever; in fact it is impossible to alter the inside measurement after a pot is once made; a mold that will make one pot correct will make any number (until the mold wears out) exactly the same. In reference to the absurd "propositions" of Messrs. A. H. Hews & Co., we decline to be a party to the proposed exhibitions as it would be a gross insult to the honorable gentlemen of the committee, who, after giving their time and labor to the society, are at least entitled to common courtesy.

As the report of the proceedings of the Convention at Boston, Mass., is now published; read carefully the reports of the Committee on Standard Flower Pots on pages 100 and XIV.

THE SUPPLY of flowers for Christmas was unusually large this season. Undoubtedly the mild weather was a decided factor in bringing out the heavy supply, but the large increase in glass devoted to the production of cut flowers unquestionably played an important part. It would appear that production, even for the holidays, now equals the demand, at living prices, and in some cases exceeds the demand at paying figures. Certainly not for a long time have first class flowers sold so cheaply at the holidays. Some complain of a decrease in sales, though it is probable that the same, or a larger number of flowers were sold, but at lower prices.

Color.

BY H. H. BATTLES.

[CONCLUDED.]

On examining the list of scarlet we find that the term has been used two hundred and fifty-three times with sixty-seven variations. How can these many terms be simplified?

Scarlet is the color between crimson and orange, the most brilliant red seen in flowers, more brilliant than vermilion, no purple or blue in its composition.

"Brilliant Scarlet," we know of but two circumstances when it is more brilliant than scarlet; when the flower has lustre, and when the direct rays of the sun shine on that lustre.

"Orange scarlet" is a term well chosen and would represent the color which is so difficult to determine between scarlet and orange, hardly a light scarlet or a dark orange, when this uncertainty arises the term can generally be used with safety.

"Crimson scarlet" bears the same relation to crimson as orange scarlet does to orange.

"Rich Scarlet," see Brilliant.
"Rich scarlet approaching crimson." We should suppose that the words dark or very dark scarlet would express the shade intended.

"Deep scarlet," see rich scarlet.

"Dazzling scarlet," see brilliant.

"Brilliant crimson scarlet," see brilliant and crimson scarlet.

"Fiery scarlet," see brilliant scarlet.

"Intense," see brilliant scarlet.

"Rich velvety scarlet." We suppose that the word velvety refers to the texture of the flower, as the Jacquemot rose is velvety compared to the Gontier.

"Light scarlet" is a term well chosen, and approaches orange by the addition of white or yellow.

"Rosy scarlet." The term rose as applied to color generally indicates that blue has been added to some tone or shade of red. The color of the La France is, I think, the popular notion of "Rose color." Now, as blue can be distinctly seen in the La France, and as blue mixed with red or pink makes a shade of purple or possibly lavender, let us discard the term rose or rosy and say light lavender pink, or very light purplish pink. In the dry goods business, and consequently among the ladies, there is a well defined hue called cherry, which has a "dash" of purple in its composition. This we believe to be synonymous with the "Rosy scarlet" in our list, both of which it would be well to discard for the terms "Purplish scarlet" or "Light purplish scarlet," etc.

"Vivid scarlet," see brilliant.

"Dark crimson scarlet," see crimson scarlet.

"Very bright scarlet," see brilliant.

"Dark scarlet," well chosen.

"Bright crimson scarlet," see crimson scarlet plus brilliant.

"Bright shining scarlet," see brilliant.

"Maroon scarlet." We should suppose that the author wished to express a broken shade of scarlet, possibly the word "dull" would express the idea.

"Vermilion scarlet" could be expressed by the term dark or very dark scarlet.

"Dazzling vermilion scarlet" could be called brilliant dark scarlet.

All words, such as dazzling, fiery, vivid, glowing, bright, fiery, shining, intense glowing, etc., could be expressed by the words brilliant or lustrous.

PURPLE.

"Purple," well chosen.

"Violet purple," well chosen.

"Rosy purple," reddish purple or light reddish purple.

"Dark purple," correct.

"Royal purple," dark bluish purple.

"Rich purple," dark blue (or velvety like pansies).

"Light purple," correct.

"Deep purple," dark or very dark.

"Rich violet purple," bluish purple.

"Reddish purple," correct.

"Brownish purple," correct (or dull purple).

"Bronzy purple," light purple or brilliant purple.

"Bluish purple," correct.

"Lilac purple," light reddish purple.

"Beautiful purple," harmless. We think all clear tones of purple are beautiful, especially among flowers.

"Brilliant purple," correct.

"Crimson purple," not bad (possibly reddish purple).

"Deep rich purple," dark, or very dark purple.

"Dark velvety purple," velvety we suppose refers to the texture of the flower, possibly dark purple pansies were referred to.

"Dark vermilion purple," dark reddish purple.

"Blackish purple," possibly the color we see in pansies.

In trying to give a clear idea of color we should advise the comparing of certain flowers with some of the most popular flowers at that time, for instance, without having samples before us, we should say that a light Grace Wilder carnation was the ideal pink; the La France rose, a very light purplish pink, the pink seen in Grace Wilder with considerable purple in its composition for the outside of the petals, while the inside is a pinkish white. This rose is very much admired by artists for the graceful curves that the petals assume as it develops. The odor is very much like the Jacquemot, but more delicate and refined.

The Catherine Mermet, a light pink with no purple but a "dash" of yellow, a beautiful shaped rose rather longer bud and more symmetrical than the La France, a decided tea odor.

In describing the color of flowers it is

well to consider which is the best light, no artificial light compares favorably with "daylight." It is impossible to get an accurate notion of color by gas light. Direct sun light is also deceiving. How often have we seen translucent flowers in the garden with the sun's rays streaming on them, how very brilliant they appear, the same flowers in deep shadows or in the house seem dull by comparison. Therefore it is well when we are anxious to be as accurate as possible, to select clear daylight, but not in the direct sun light. All substances with lustrous or polished surfaces reflect more light, consequently lustrous flowers, polished petals, silks and plushes with their beautiful sheen are capable of more changes of tints, especially in sunshine and shadow than "opaque" bodies which are without lustre, polish or sheen. This lustre might be denoted by the term "brilliant" as the sunflower is yellow, while the buttercup is brilliant yellow.

In speaking of broken hues, A. H. Church says: "We now pass on to consider the constitution of those hues which contain grey. They may be considered as primary and secondary colors of low luminosity mingled with white. When speaking of pigments we regard them as containing both black and white. They constitute "broken" (or dulled) tones of primaries and secondaries. It is not easy to name them in a way that will prove generally acceptable, but the following list, in which the order of the chromatic circle is followed, may prove of some service:

Broken red (crimson)	Maroon
Broken orange	Russet
Broken orange yellow	Brown
Broken yellow	Citrine
Broken yellow green	Olive
Broken green	Sage
Broken blue green	Bluish Sage
Broken purple	Plum
Broken blue	Slate."

The colors here named have been identified so long with the popular terms that it would be well to retain their names at the expense of the logic.

Church referring to color blindness says: "It is certain that the vast majority of persons when viewing colored lights or colored objects, experience identical color sensations. They will arrange and classify tints and shades of all distinct hues in the same order and in the same groups. Such mistakes as they will make will be attributable either to imperfect training and inexperience, or to a slight lack of sensitiveness to colors of very small brightness, or to faulty nomenclature. There is, then, a normal or standard color sensation. But there are numerous cases of abnormal or imperfect color vision, ranging considerably in degree and varying occasionally in kind; they occur much more frequently in men than in women. This subject was investigated by Dr. John Dalton, and subsequently by Dr. G. Wilson, of Edinburgh. Maxwell made a series of instructive experiments upon one of his pupils who was partially color-blind. In France during 1873-5 Dr. Fèvre found that over 9 per cent of the railway officials of all ranks (1,050 in number) whom he examined were color-blind. Prof. Holmgren in 1876 ascertained the percentage to be nearly 5 among the officials (266) of the Upsala Grefte line in Sweden. Mr. F. Galton found among the visitors to the International Health Exhibition in London, of 1884, that out of many hundred persons examined a very large number of males and a very small number of females had a more or less imperfect vision as to

distinctions of color, the numbers corresponding pretty nearly to the percentage which previous observers had found. According to the report of the Penna. R. R. it was ascertained that about 4 per cent of the men examined were color-blind.

"Color blind persons, of the large group we have been describing, discern no difference of hue, but only a difference of tone, between the flowers of a scarlet geranium and its leaves; between red and green cloth; between a gravel path, a grassy lawn and autumn leaves. They will sort skeins of variously colored wools in the strangest way, interposing red and yellow amongst the green hues, and mingling blues and violets together. There is, however, a very simple way in which it is possible for such persons to correct in a measure such erroneous impressions. When they are in doubt as to whether they are choosing a piece of scarlet cloth as a match for a piece of green, they have but to view both through a piece of green glass, or through a piece of rich red glass. The scarlet cloth will seem to them nearly black, and the green cloth green through the green glass, while through the red glass the green will appear nearly black and the red cloth green."

At the present time there is no accepted nomenclature of color either among the men who treat the subject of light and color as a science, or among naturalists who have long felt the want of such a system in order to intelligently describe their specimens. Among trades people the same difficulty exists. Sample cards and books are issued, naming and numbering the different hues, shades and tints. Each card has a peculiarity of its own, but more often than not words are used that do not in the least indicate the color intended to be described.

Winsor and Newton are well known manufacturers of artists' pigments. It would be most natural to look to them for advanced ideas on this subject. Artists who have become familiar with their nomenclature find no difficulty in identifying the several colors, but to people who have not used them, "Hoopes' Green Number Two," "Burnt Lake," "French Blue" and similar names express but little.

A. H. Church says "Many attempts have been made to classify colors, including under that designation not only all hues, with their shades, tints and broken tints, but also white—a balanced or neutralized compound of two or more hues, and black—the correlative of light and color.

"The real difficulty begins when we attempt the classification of hues, that is of colors proper. Where can we find standards of comparison for all colors in respect of three constants of color—hue, purity, luminosity?

"The difficulties in the way of classifying colors are augmented by the very number of hues with their shades and tints possessed of varying degrees of luminosity, which the human eye is competent to distinguish. From experiments, in which small quantities of one-colored light were added to another or to white, Aubert calculated that fractional quantities of light, varying from 1-100 to 1-300 produced recognized differences, and that a thousand hues could be distinguished in the solar spectrum. Add to these the hues produced by gradual increments or decrements in luminosity and the whole series of purples, and we reach a grand total of colors which must be measured by hundreds of thousands."

"Quite recently another attempt at naming and classifying colors has been

made by R. Ridgway. The small volume which he has prepared is intended primarily for the use of naturalists, but it possesses one feature at least which is likely to be appreciated by many persons interested in decorative and pictorial art. This is a comparative vocabulary of color names, giving in parallel columns on nine double pages, the equivalent words in English, Latin, German, French, Spanish, Italian and Norwegian. The most striking characteristic of the book is, however, a series of colored plates. Each of these plates has been planned with skill and care, and executed in water color pigments of considerable or complete stability. There will certainly be diversity of opinion as to the justness of the application of many of the names to the actual colors given. But to name tints, hues and shades, instead of merely numbering them, constitutes a step in the right direction. Until an International Standard-Color Conference of artists and scientists has finally agreed upon the names given to a couple of hundred different hues, reproduced in enamel and preserved in color, like our standards of weight and measure, we must be grateful for any attempt, even though it be but partially successful, in the way of a consistent and complete nomenclature. As an example of Mr. Ridgway's sets of color-names we may cite those which he assigns to twenty hues, lying between red and blue, and belonging to the group of purples:

1. Prune	10. Phlox
2. Dahlia	11. Pomegranate
3. Auricula	12. Mauve
4. Pansy	13. Magenta
5. Indian Purple	14. Wine-Purple
6. Royal Purple	15. Lavender
7. Aster	16. Solferino
8. Maroon	17. Heliotrope
9. Violet	18. Lilac
	19. Rose.

"The mere inspection of this list suffices to show that although there may be a judicious selection of color-names here, there is nothing approaching to a scientific classification of them."

One of the most famous art critics in the country was asked where the best nomenclature of color could be found. He answered from the manufacturers' list of artists' pigments.

A very eminent professor in one of our leading colleges refers all persons in search of knowledge on the subject to a famous firm of silk manufacturers, who issued a very beautiful sample card. Among the terms used we find: London smoke, Japanese, raisin, old rose, terra cotta, crushed strawberry, ashes of roses, sultan, new brown, new green, tea rose, new tan, Bismark, etc. Many of these terms are created for that fickle dame, fashion, and like many other of her whims will have but a short life. Many of the terms used are well chosen, and their sample card shows a marked improvement over many of their competitors.

In the early stages of our researches we were glad to learn that Harper & Brothers had published a chart on color for "School and Family" use by Marcus Wilson and N. A. Calkins. After procuring one of these charts we found that the names differed so materially from the impressions that had been formed on our minds, that we took every means of ascertaining the popular idea of the most common colors. In passing it is but justice to the gentlemen who issued the color chart, to say that in all probability the samples had faded very much and hardly expressed their views. Still it was

WEDDING DECORATION AND WINDOW ARRANGEMENT.

this difference of opinion that caused us to procure samples of silks, cotton, papers, pigments, etc., etc., and in every case where it was possible we got the best men in the best establishments to give us their personal judgment as to the naming of the colors. And how they differed!

Until the proper authorities determine upon the names of several hundred hues, and as Mr. Church suggests, reproduce them in enamel the question will not be settled. But in one's own business there is room for marked improvement and within the reach of all who have the desire. The simplest way is by far the best.

Would it not be well in selecting adjuncts with which to describe shade and tints to use a list like the following. Very Dark, Dark, Light, Very Light, Pale and Faint, Brilliant, Dull and the names of colors that are detected in their composition. We will endeavor to describe a few uncertain colors as they come to our mind.

Lavender,	{The faintest tint of purple.
Lilac,	{The faintest tint of reddish purple.
Light purple,	Violet.
Light reddish purple,	Heliotrope.
Dark bluish purple,	Royal purple.
Reddish purple,	Magenta.
Maroon,	Garnet.
Crimson,	Cardinal red.
Purplish scarlet	Cherry.
Light purplish scarlet	{Light cherry.
	{Red rose.
	{Geranium red.
Lavender pink,	Rose pink.
	{Dark rose pink.
Dark lavender pink,	Geranium pink.
	{Peach blossom pink.
Orange,	Cadmium.
Light sulphur yellow,	Light lemon yellow.
Light sulphur yellow,	Primrose yellow.
Dark sulphur yellow,	Lemon yellow.
	{Citron yellow.
Yellowish green,	Absinthe.

Yellowish white,

Reddish brown,

{Cream white.

{Ivory white.

{Mahogany.

{Terra cotta.

We cannot imagine what colors are meant by such terms as: Deep orange blue (possibly some shade of green), salmon rose, fine salmon rose, transparent salmon rose, brilliant salmon rose, bright salmon rose, clear citron rose, exquisite salmon rose, light salmon rose, orange rose.

The term rose generally indicates that blue has been added to some tone or shade of red, which gives it a purplish or light purplish cast. What colors the authors intended to describe by the addition of salmon, yellow and orange to a purplish pink (rose) we cannot understand.

We have just received a little book, "Color in the School Rooms" published by Milton Bradley Co., which will be welcomed by all who are interested in the subject of color. The following we quote, which will give the best idea of their nomenclature:

The samples are designated by symbols in which R. is red, O. orange, Y. yellow, G. green, B. blue, V. violet, T. tint, S. shade. P. is introduced for convenience, although it should be composed of R. and B." As these are in the full line two tints and two shades of each standard the numbers 1 and 2 are used. Thus "R. T. 1" is red tint No. 1, "R. S. 2" is red shade No. 2, "Y. G. S.", yellow green shade, etc.

While we endorse this book most heartily and know that it will awaken a great interest in color and the harmonious arrangements of color, we do not feel that this system of naming will help us in attempting to intelligently name the colors of flowers. In their list we find no maroon, no crimson, no scarlet, no pink, etc., all to be discarded for the unsatisfactory

terms of red with various tints and shades to be known by numbers.

The more we read and the more we think upon the subject, more firmly are we convinced that there is at present a fairly well defined popular nomenclature of color; and until there is a far better naming of colors than has yet been offered, we deem it advisable to conform to the popular notion. At the first glance it does seem ridiculous to admit that goblin blue, Nile green, Nile blue, salmon, buff, etc., are wise terms to use, but what terms can we use that will be so well understood? We have as far as possible in our list, endeavored to find synonyms for many of such terms, but we do not hope that they will entirely take the place of well known terms. Such terms will not go until something much better and permanent is given in exchange. And there will be no revolution in the popular nomenclature of color until the colors and names are agreed upon by an "International Standard Color Conference" and the colors and names that they agree upon made permanent by being reproduced in enamel.

Wedding Decoration and Window Arrangement.

At the left in the accompanying illustration is shown one of the details of a handsome wedding decoration recently arranged by Thorley of New York. The doors were all wainscoted with flowers, which is quite the fashion nowadays, and in the back parlor there was a large display of orchids. Only a portion of the front parlor is shown in the picture, where there is a white satin curtain trimmed with lilies of the valley, before which the bridal pair stood when they were married. There were a number of palms on each side of this curtain, and

the path that led up to it was made of white satin ribbon held up here and there by standards of pottery with bouquets on top and roses running down the sides.

On the right hand of the floral decoration is Thorley's store window which occupied 20 feet on Broadway. This is filled with a large bank of large and small palms and ferns. On either side of this center is a large group of orchids. Cattleyas, cyripediums, odontoglossums and a few oncidiums. There were bunches of cattleyas and lillies placed between and at the sides. Several growing plants of the same were in the foreground, and on the side facings of the window. Several specimens of Japanese oak were also shown among this fine display of palms and orchids. F. A. B.

Notes From Staten Island.

BY WM. FALCONER.

Some of the finest chrysanthemum flowers I have ever seen have been grown and exhibited by Mr. Wm. Tricker, of Dorgan Hills, Staten Island. Some idea of Mr. Tricker's success as a chrysanthemum grower may be inferred from the fact that at the exhibition of the New Jersey Horticultural Society at Orange some weeks ago he was awarded first premium for 50 Japanese flowers, first for 12 and first for 6; also first for 12 Chinese and first for 6; first for 6 anemone flowered and first for 6 pompons. At the Philadelphia show he was awarded first premium for 100 blooms, one of a kind, and first for 36 blooms, one of a kind, also first for 36 blooms, three of a kind. At the Philadelphia shows too, within the past two years he had been the recipient of two gold medals for chrysanthemum flowers, and a year ago of the Fitcher medal at Orange, N. J.

Being in New York the other day and having a little while to spare I went down to Dorgan Hills—takes about 40 minutes from New York—to see how Mr. Tricker grew such splendid blossoms.

Mr. Tricker is an Englishman, genial and unpretentious and a great enthusiast in the matter of chrysanthemums, and makes these and aquatics a specialty.

His pot plants were all single stemmed summer struck cuttings. These cuttings were put in in the propagating bench last June and as soon as rooted potted off into 2½-inch pots, then directly into 6-inch pots. As soon as they had taken good hold in these they were plunged out of doors in a sheltered but open border, and to the brim of the pots, and all over the ground and the surface of the pots a mulching of rotted manure had been spread. This mulching keeps the ground cool and moist, and also acts as a stimulant.

The main point in growing good chrysanthemums is to begin with strong healthy cuttings, and from the moment they are rooted keep them growing unchecked till the flowers are cut.

His main crop of plants had been raised from March struck cuttings and grown on in pots till May when he planted them

out in beds within a span skeleton frame greenhouse in a sheltered place. This framework is 11 feet wide, fully 6 feet high on the sides and 9 feet high to the ridge. The sides are open all around, and to cover the top the sashes from the spring horded beds and cold frames are used. And the sashes are put on in May and kept on all summer. Abundant ventilation is afforded by the sides being open all around, and the roof saves the plants from drenching rains in summer and cold rains in fall, which is of great benefit to the plants, especially in preserving good foliage. Six rows of plants are set out in the bed, three on each side, two feet by two feet apart, and there is a space about three feet wide in the middle. Each plant is restricted to three stems, and these are allowed to grow as high as they will. Three tall cane stakes are given to each plant and fastened to three wires—one above the other and two feet apart, wire fence fashion—that run along each row of plants. This renders summer tying very simple. When unfavorable fall weather comes in the sides of this frame house can be filled in with other sashes or a canvas curtain can be dropped down over them. Here Mr. Tricker cuts his finest flowers.

Mulching.—The ground all about these plants is also mulched with rotted manure in summer, and chiefly to keep the earth cool and preserve the roots—for chrysanthemums are near-the-surface rooting plants—from the drying influences of wind and sunshine.

Stimulants. In addition to the extra nutriment afforded by the mulchings Mr. Tricker freely with diluted liquid manure from the barnyard tanks. And he waters freely from the hose in summer whenever needed.

Border plants. In a wide border against a high board fence an immense number of chrysanthemums are grown. These are summer struck and also there are spring struck plants kept dwarf by early pinching. All are planted out, mulched and treated much in the same way as those under the framework, but they are left open all summer. On the approach of fall weather some light pine strips, 9 or 10 feet apart and fastened at one end to the fence at the back and at the other to 4 feet high posts inserted along the front, and so as to support cloth sheeting on rollers. In fine weather the sheeting is rolled up at night and in unfavorable weather it is let down.

The sheeting used is a medium grade of the plant protecting cloth, that is the oiled cloth so much used nowadays for make shift sashes in spring.

In frames. Mr. Tricker also had a large number of midsummer struck plants planted out in frames which as fall came on were raised to 3-boards high at back and 2-boards high at front and covered with sashes, and here he got many fine and late blossoms.

Leaf disease. Starvation, exposure of the surface roots, over crowding, injury to the roots by too much rain or water, and a good many other unfavorable conditions cause leaf spot. Last year Mr. T. used sulphur and soapy water, spraying the plants with the solution, but he couldn't say that it did much good, any way he didn't like the unsightly sediment it left upon the foliage. This year he used "Grape Dust" instead, applying it with a bellows, and he assured me it is the best and most effectual remedy or preventive of chrysanthemum leaf disease he has ever tried.

When he propagates his stock. He is now hard at work raising young plants,

but these are for sale on demand; he never strikes his own prize-flower stock before March, or his one-stemmed pot plants before June.

In summing up Mr. Tricker's practice we find that all of his plants except those in 6-inch pots from June cuttings, have been planted out in beds, staked early in life, disbudded both as regards flowers and side shoots, mulched with rotted manure and liberally fed and watered, and effectual provision is made early in the fall to protect them from cold or heavy rains, high winds, or injurious weather of any kind.

Among a lengthy list of favorite kinds given me by Mr. Tricker are: White—Avalanche, Eynsford White; Boile de Lyon, immense, full double; Ivory, early; Mlle. A. Delaux, not very large but good; Mrs. J. Wright, tall growing; Stanstead White, The Bride, Mrs. Bullock, Miss Anna Hartshorn, L. Canning, fine but doesn't stand well when cut; Miss Humphreys, small but late; Robert Bottomly and Miss Minnie Wanamaker. Among yellow—H. E. Widener, Mrs. W. K. Harris, Sunflower, but weak on stalk; Glorioso, Grandiflorum, W. H. Lincoln, Coronet, Mr. H. Cannell, Mrs. Winthrop Sargent, Kioto, E. G. Hill and Peerless. Among others—Lilian B. Bird, V. H. Hallock, Syringa, Excellent, Miss Mary Wheeler, A'cyon, T. C. Price, Mrs. Fottler, Miss Esmeralda, Elkhorn, Mrs. Irving Clark, Source d'Or, S. B. Dana, Mrs. Falconer-Jameson, Ramona, Mrs. Andrew Carnegie, Comte de Germany, Mrs. Pres. Harrison, Mrs. E. W. Clark, Ada Spaulding, etc.

House of Christmas Eve Chrysanthemums.

The illustration is from a photograph taken December 18 of a house of Christmas Eve chrysanthemums at Mr. H. E. Chitty's, Paterson, N. J., and shows the Christmas crop of bloom. At the left is seen a side bed of Lamborn carnations.

The Chrysanthemum Bee-fly (page 258).

No, Mr. Rowe, I won't do it. Not one word of what I wrote, page 222, about this dirty creature will I retract or modify. Before I abused the little wretch publicly I had read all of the articles to which you have called our attention, and more, and had corresponded on the subject with our eminent state entomologist.

You tell us that from eighty seedlings raised from Mrs. F. Thompson chrysanthemum whose pollination had been effected by this fly you obtained 17 varieties all better than the parent. This is extraordinary and surpasses anything in this line I ever heard of before. And then you tell us that from some shop seed you bought you raised a lot of seedlings that weren't worth shucks. But wasn't the pollination in their case too effected by the bee-fly?

Within the last seven years I have saved seed and raised and flowered hundreds upon hundreds of seedlings, and I deeply regret to have to admit that I have not secured from among all my hundreds, 17 that are better than Mrs. F. Thompson's. And during all of this time this bee-fly has worked for me like a little Trojan in the fertilization of my flowers, and it had good material to work from—over 200 of the leading varieties. But do not infer from this that I deprecate the effectiveness of its work in fertilizing the flowers, the trouble is it works too much; it works more among single and partly single flowers than among full double

MR. CHITTY'S HOUSE OF CHRISTMAS EVE CHRYSANTHEMUMS. PHOTOGRAPHED DEC. 18

ones and in this way impregnates the good flowers with the pollen of the indifferent or single ones, or mixes up all the classes of chrysanthemums together. Flowers that are shorn of their petals and left exposed in the open greenhouse even if touched up every forenoon with the camel hair pencil cannot be said to be hand-fertilized, for they are also under the influence of the bee-fly and other natural means of diffusing pollen.

My objection to this fly is its filthy habits. It bespoils the flowers it infests, and the whiter the blossoms are the more conspicuous become the excreta spots it leaves upon them.

W. F.

Ferns for Exhibition.

Doubtless one of the best methods of popularizing any given class of plants is through the medium of public exhibitions, and it is therefore to the interest of the general florist to grow a few attractive specimens for this purpose.

And if the florist in question be of a calculating turn of mind he can charge the space so occupied to advertising, as the advertising ability of a nicely arranged group of well grown plants is unquestioned and gives the general public just the kind of information they are likely to need regarding the decorative effect of certain plants.

It will therefore be readily seen that the space used in growing exhibition plants is not space wasted, not merely on account of the money premiums that may be secured, though these in many cases

are not inconsiderable, but also from the fact that trade may thus be stimulated.

Of course this exhibition business may be overdone, so as to interfere with the regular stock of the establishment, but the amount of space devoted to this purpose must be decided in accordance with the size of the establishment and the needs of the locality, and must naturally be left to the judgment of each individual. And among the plants thus used with very happy effect are a number of the stronger growing ferns, being those of such character that they may be grown among a general collection of foliage plants with a reasonable degree of success.

Prominent among these may be mentioned a few distinct types to be found in the Maidenhairs, beginning with *Adiantum trapeziforme*, this being one of the best for our purpose and also very easy to grow. As the fronds of this variety are frequently three feet in height and with very large pinnules of bright green it makes a most effective specimen.

A. formosum is another bold growing sort, and has the additional merit of doing well in quite a cool house, and the fronds stand very well when cut.

A. intermedium, or *A. Brasiliense* as it is also called, may too be classed among the useful ferns, having dark green bipinnate fronds about eighteen inches in height, and very freely produced. This variety is also very pretty in a small state for ferneries, but unfortunately cannot be induced to grow rapidly during the winter.

A good plant of *A. cuneatum* is always a thing of beauty, and should be included in every collection however small, and if proper accommodations can be given it a specimen of *A. Farleyense* should be counted in, but it should be understood that the latter variety is not included among those that may be grown under the most ordinary conditions, for though not extraordinarily difficult to cultivate yet the "Queen of the Maidenhairs" is somewhat more capricious than the varieties previously referred to.

Some of the nephrolepis should also be included, as these handsome ferns are of rapid growth and easily propagated. Among the older sorts *N. davalloides* fureans is one the most ornamental, its light green, crested fronds frequently growing four to five feet in length, while the well-known *N. exaltata* is a good second, and is one of the most hardy of the genus.

Of the later introductions in this genus, *N. rufescens trippinatifida* is the gem, its elegant plumose fronds being finely cut and crested and make it decidedly the finest of the genus.

The *davallias* also include many fine exhibition sorts, among which may be specially noted *D. Filixensis* and its variety *plumosa*, the latter being finer cut and rather more graceful than the type, and *D. pallida*, (probably better known as *D. Mooreana*) this being one of the strongest growers in the genus, the fronds sometimes attaining a length of four to five feet. the widely known *D. tenuifolia stricta* also makes a pretty show plant.

though naturally much more dwarf than the preceding.

Some of the platyceriums should of course be included in the collection for the sake of variety in form, though the quaint beauty of these plants entitles them to a place anyway, and a well-grown plant of the old *P. alcicornis* is very effective, basket cultivation showing off its beauties to good advantage. *P. alcicornis* major is a great improvement on the preceding, and *P. grande*, and *P. Hilli* are both very attractive.

Dennstedtia cicutaria, (also known as *Sitobolium cicutarium* and *Dicksonia cicutaria*) is another useful fern of strong growth, and providing it is not grown in too close an atmosphere may be used in an occasional decoration, and with good effect.

One or two *blechnums*, such as *B. Brasilense* or *B. corcovadense crispum* will be found to add much to such a display, while some of the *polystichums* such as *P. aristatum variegatum* and *P. capense* are among the hardiest of greenhouse ferns.

If proper accommodations can be given them, there are few ferns superior to the *gleichenias*, but it should be kept in mind that most species of this noble genus do best in a night temperature of 45° and as they are naturally shallow-rooters should not be given too great a depth of soil, but abundant drainage. W. H. TAPLIN.

Funkias.

These are hardly herbaceous perennials, natives of Japan and other parts of N. E. Asia, and very desirable garden plants. The White Day Lily (*F. grandiflora*) is very well known, and, indeed, it is the most important of the family. But as the appellation Day Lily was the accepted English name of *Hemerocallis*, a nearly allied but much different looking genus of plants, for instance, Yellow Day Lily (*H. flava*) and Tawny Day Lily (*H. fulva*), about ten years ago Mr. William Robinson, of London, asked for an appropriate English name for the genus *Funkia*. Mr. Edwin Jackson, of Bangor, Wales, suggested Plantain Lily, because "the plants bear a fair resemblance in habit of leafage and inflorescence to * * Plantago major, while the funkias are one branch of the very extensive lily family." Mr. Robinson replied, "A good name." "Henceforward we propose to use this as the English name of funkia." And the name has been pretty generally accepted.

For garden use the principal species are *F. grandiflora*, the splendid white plantain lily that blooms in late summer; *F. Sieboldiana*, the most massive of all the genus, with handsome bluish green leaves and pale bluish-purple flowers in summer; *F. lancifolia*, the narrow leaved species that blooms in September and which has bluish-purple blooms; and *F. ovata*, which blooms in early summer, is of medium to vigorous growth, and has long petioled ovate leaves. *F. subcordata* belongs to the grandiflora set. *F. Fortunei* is near akin to *F. Sieboldiana*, and in the lancifolia section *F. spatulata* and the beautiful little variegated *F. undulata* are included.

While for flowers or fine foliage all are desirable garden plants, *F. grandiflora* is the only one I would recommend to the florist for cut blooms.

But their fine foliage effect is as good as that rendered by many soft-leaved tropical plants, and as they are easily forced into full foliage in winter, florists should try them in this way. And as we have beautiful and decidedly variegated forms, particularly of *F. ovata*, these

FUNKIA SIEBOLDI (REPRODUCED FROM LONDON GARDEN.)

should be given the preference. Among the best of these variegated plantain lilies are *F. ovata*, fol. argenteo variegata, *F. o. fol. aureo* var., *F. Fortunei marmorata*, *F. lancifolia marginata*, *F. l. var. spatulata marginata*, and *F. undulata variegata*. This last named is the little one so commonly used as a border in gardens.

All funkias are of the easiest possible cultivation, and they all like shade; indeed the variegated forms of *ovata* can only be kept in perfection when they are grown in shady places. But, for nursery purposes, open field culture suits them well enough. They are easily propagated by division, and the species, if need be, from seed. W. F.

House of Lizzie McGowan Carnations.

Our illustration is engraved from a photograph of a house of Lizzie McGowan carnations, grown by Mr. H. E. Chitty, Paterson, N. J. On the sides of the center bed is seen the wire netting used to keep the plants from falling across the foot path, as described by Mr. Chitty in a recent article in the FLORIST. On the left is seen a side bed of Lamborn carnations. The photograph was taken December 18.

The engraving also gives a good view of the interior of the new iron framed greenhouse erected by Mr. C. last summer. The entire framework is of iron, securely bolted together.

New York Floral Notes.

New York has never had such a demand for Christmas greens. The prices for fine greens and holly are a little higher this season than they ever were before. The Klunder Company made a beautiful decoration at Grace church; all the columns of this church were decorated with Christmas greens; evergreen trees were placed both sides of the altar where there were trimmings of vines and ivy; mounds were made of ivy also on each side of the altar. On the communion table in baskets were placed poinsettias. A great many scarlet wreaths of immortelles were made which were placed on the tablets, these were fastened on with branches of ivy. The arrangement of the mistletoe on the sides of these wreaths was very graceful and showed in beautiful contrast to the white marble of the altars.

A fine arrangement was also made at Father Ducey's church by the Klunder Company; the ten columns of the church

were covered with ivy and clematis; wreaths of ivy and mistletoe were hung from these columns; large groups of palms were placed at each side of the church; the altar itself was covered with large baskets of holly and white lilies; white roses and a few white flowers were placed here and there in the nooks of the white marble.

A suite of rooms at the Hotel Florence were decorated with wreaths of holly and bunches of mistletoe, and a bay window was very handsomely decorated with the latter; the mistletoe was hung all through the windows with very pretty effect. In the rooms the vases were richly trimmed with holly, and satin ribbon of the same color as the holly was tied upon each vase.

A beautiful dinner arrangement was made at Mr. Rhinelanders; the table was circular, and on this was a large mirror framed with cypripediums, among which was mistletoe. There was a little Adiantum Farleyense among the cypripediums in the frame; the whole represented a pond of water with beautiful effect.

Siebrecht & Wadley decorated the Methodist church on the corner of Madison avenue and Sixtieth street with three high panels, which were 18 feet by 12 wide, each of which bore an inscription from the Bible. The panels were covered with ivy, hemlock and holly, which very prettily showed three shades of green. Among these green panels were placed bells, wreaths and stars with fine effect.

The different types of imported holly trees are very handsome; these are placed in pots from 10 to 14 inches in size, which are dressed off in green moss; they are frequently sent as Christmas gifts and the largest ones are found very useful for vestibule decorations.

The azalea known as the Deutsche Pearl is now in market here and looks very handsomely among the Christmas greens. Dwarf orange trees full of fruit are used frequently by many families for a nice decoration; these trees are the Otahite or Chinese variety. The plants are in 5 and 6-inch pots, are not over 18 inches high, and usually bear about six oranges; these are frequently used in large dinner designs for the table.

A specimen plant of cyclamen of the giganteum section is frequently sent as a holiday present placed in a jardiniere. There is a good supply of orchids that are selling well. Primroses are just coming in and are of great beauty. Japan lilies are also very fine.

Alexander McConnell has sold quanti-

MR. CHITTY'S HOUSE OF LIZZIE MCGOWAN CARNATION PHOTOGRAPHED DEC 18

ties of Florida palms with which people seem to be very much in love; he has had *Ardisia crenulata* placed in celluloid baskets of white and pink. The fern pans in silver, filled with lycopodium, *Aucuba Japonica*, *ardisia* and *Cocos Weddelliana* are extremely pretty and these have had a great sale. Mr. McConnell has made up the "Parisian basket" during the holidays, and these also have had a fine sale, being filled with plants that last, in a fern pan underneath.

Mr. William Burns, who has the old store of Alexander S. Burns, is well patronized this holiday time; he had the decoration at Mr. Joseph H. Choates, which was a children's celebration held two or three days ago. The mirrors in the parlors were handsomely trimmed with holly and berries, and the doors were also made beautiful with this trimming. The crystal chandeliers of the parlors were trimmed with smilax and mistletoe. Mr. W. I. Brower is making up a new corsage bunch for Mr. Burns, which is becoming a great favorite; this is made of the Alexander pink carnation, with Grace Wilders, which are of not so deep a color, placed below them. This bunch is made very narrow, and is edged with maidenhair ferns and a few mistletoe sprays.

The Hanft Bros. are making up many favors of Christmas greens, and have their store completely covered on the outside with imported Roman wreaths. These are all a late importation from Berlin, and some of them are extremely

pretty. A wreath of edelweiss, trimmed with purple flowers, and with a scarlet bow at the side, is one of these pretty pieces. The Hanfts, although using a great many fine flowers in baskets and designs, still cling to the old camellia at holiday time, and it is well appreciated by many who order flowers at this place.

F. A. BENSON.

Chicago.

Quite a number of growers of and commission dealers in cut flowers mourn the absence of James B. Neal who for a little over a year past has carried on a florist business at 149 State street under the names Neal Floral Co. and M. Neal. He left town Christmas night, after getting in all the money he could from the heavy sales of the day before, and leaving unpaid bills to the amount of \$5,000 or \$6,000 behind him.

Neal came to Chicago in October 1889, and for a few weeks was in the employ of Gallagher, the Wabash avenue florist. Here he became acquainted with a gentleman by the name of Gluck whom he induced to set him up in business at 149 State street, Mr. Gluck investing about \$1,500. It was not long before there was trouble and a receiver was appointed. It is said that Mr. Gluck then bid a last fond adieu to the fifteen hundred, as he failed to get anything for his claim.

Mr. Neal again came into possession of the store, this time as M. Neal, florist, the initial being that of the woman who

passed as his wife, but whose real name it appears is Minnie Bouche, a woman of very shady antecedents. Then in spite of the fact that his reputation as a dead beat was well established, he managed to gradually secure credit for flowers and other supplies to large amounts, leading his victims on with promises to pay at certain times and then continuing the account by making a partial payment and securing still more goods than the payments covered.

He kept things going this way up to Christmas, in the mean time cutting and slashing prices in such a way as to seriously injure the retail trade in this city. He would hang out a show card offering roses at 35 cents and 50 cents a dozen when other florists could not buy the same stock at that rate at wholesale. That he could sell at such prices and still pay his bills, unless he got his supply at fully 50% less than any other florist, any person possessed of ordinary common sense knew was impossible, as his only capital was wind. Nevertheless he got credit, and as a result he was enabled to swash along and continue as a disturbing element in the trade, until last Thursday, when having got together every dollar he could, by any possible means, he and the woman left for parts unknown. He laid his plans carefully to make a last grand scoop, and they materialized finely. In several cases he secured flowers from those who would give him no credit, by offering good prices and agreeing to pay cash down on receipt of the goods, and

when the goods were delivered paying for them by check dated the day after Christmas. When these checks were presented to the bank the holders were informed that Mr. Neal had no money in the bank for several months. While he believed in getting credit himself he never gave any, doing a strictly cash business as far as sales were concerned, and one very unpleasant feature of his rascality was that he neglected to fill a host of Christmas orders for which he had received cash in advance from retail buyers. He even managed to borrow \$25 from one party the day before he left.

Probably the heaviest losers are Chas. H. Fisk, the wholesale florist, and Otto Ristow, a grower at Bowmanville, who is apparently interested in Mr. Fisk's establishment. Between them they held a judgment note for \$850 and a mortgage note for \$350, and there was probably a considerable open account besides, as Neal had been a heavy customer of Fisk's for a long time. Among the other creditors is the landlord, who has two months rent, \$400, the Electric Light Co., \$200, Heim Bros. of Blue Island, M. Weiland of Evanston, and O. P. Bassett of Hinsdale, about \$100 each, Dr. Williamson of Hinsdale, about \$150. It is reported that Gresenz & Harms were caught about \$200 by one of the Dec. 26 checks. The other losses were in various smaller sums, though an eastern rose growing concern is said to have dropped about \$500 with the "King faki" as he was generally known among the trade here.

All the employees were beat out of their wages, Neal telling them to wait until after Christmas for their pay. They are still waiting.
